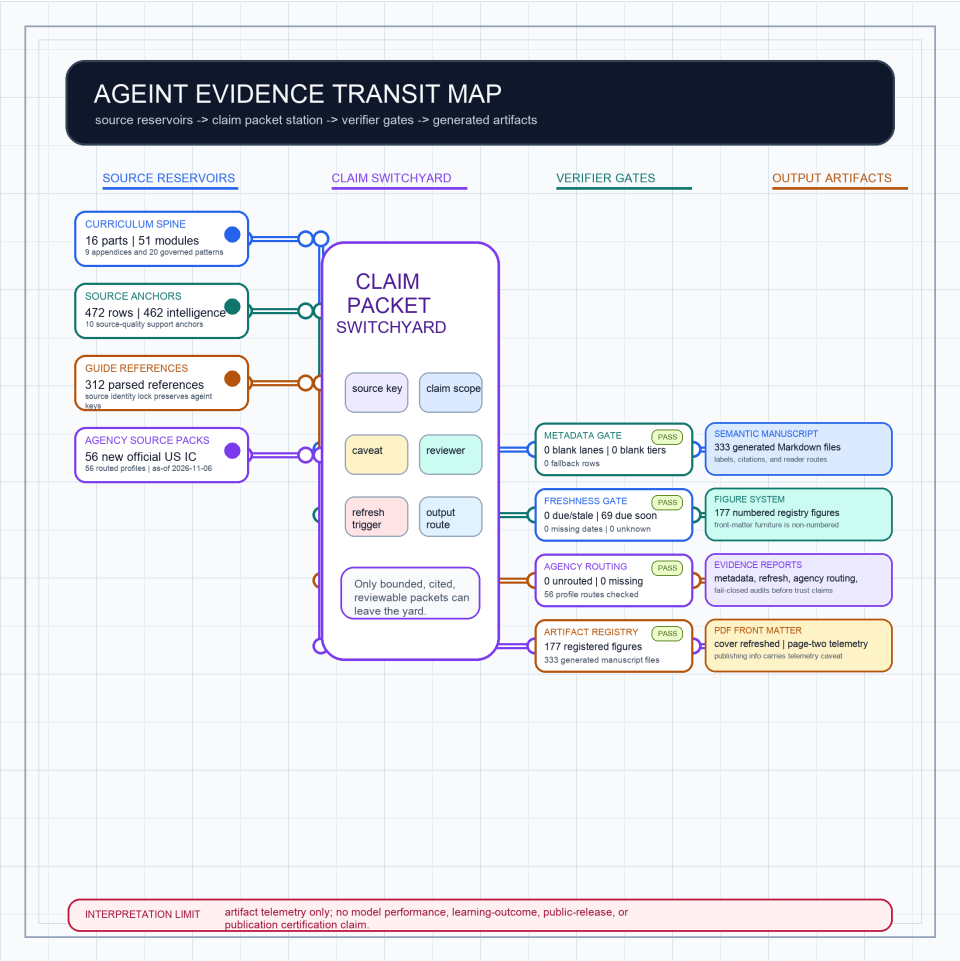
Evidence Transit Map



Source telemetry from AGEINT curriculum counts, source metadata, source freshness, agency-source routing, figure registry, and generated manuscript files. This front-matter map is artifact telemetry only: it is not a benchmark, public-release certificate, publication claim, or learning-outcome result.

This open textbook is generated from version-controlled Markdown, tested Python modules, programmatic figures, and rendered Mermaid diagrams. Corrections and improvements may be submitted via the source repository linked above.

Accessibility note: the compact PDF is optimized for dense print. Reader-profile builds, HTML output, and source Markdown can be generated from the same manuscript materials.

Contents

1 Abstract: Synthetic Analytic Tradecraft contract . . . 7
2 Curriculum Orientation: reader paths, evidence maps, and safety gates . . . 8
2.1 How to use this atlas: navigation path, evidence checks, and verifier handoff . . . 8
2.2 Synthetic Analytic Tradecraft thesis: synthetic fixtures, source discipline, and reviewable claims . . . 10
2.3 Reader paths: instructor, learner, reviewer, and maintainer handoffs . . . 12
2.4 Curriculum map: parts, modules, and source-backed route choices . . . 13
2.5 Runtime inventory: generated counts, anchors, and method appendices . . . 14
2.6 Related work and contribution boundary: adjacent literatures and AGEINT limits . . . 16
2.7 Analysis validation protocol: claim classes, evidence packets, and failure modes . . . 17
2.8 Consolidated glossary and index: terms, audit surfaces, and reader routing . . . 19
2.9 Intelligence research profiles: domain lanes, source roles, and profile routing . . . 20
2.10 Intelligence practice lenses: artifact expectations, safety checks, and review questions . . . 21
2.11 Research anchor atlas: curated sources, lanes, tiers, and claim scope . . . 22
2.12 Source lane map: provenance lanes, support strength, and refresh context . . . 23
2.13 Safe substitution matrix: defensive artifacts for risky inherited motifs . . . 33
2.14 Capstone workflow: phase sequence, artifacts, and reviewer gates . . . 34
2.15 Capstone model-answer exemplars: strong evidence packets and revision triggers . . . 35
2.16 Accessibility and UDL review: learner access, modality checks, and accommodation evidence . . . 36
2.17 Procurement and vendor oversight: tool governance, revocation, and vendor evidence . . . 37
2.18 HRIA and DPIA worksheet: rights impact, privacy review, and residual risk . . . 38
2.19 Data lineage registry: source identity, transformations, retention, and review . . . 39
2.20 Assessment integrity protocol: declared agent use, grading evidence, and human judgment . . . 40
2.21 Agent incident response drill: pause, revoke, preserve, recover, and debrief . . . 41
2.22 Role-based competency map: responsibilities, evidence owners, and assurance roles . . . 42
2.23 Adversarial assurance cycle: challenge rows, remediation owners, and retest evidence . . . 43
2.24 Model and dataset documentation card: intended use, provenance, caveats, and lifecycle . . . 44
2.25 Transparency and communication notice: purpose, safeguards, human review, and limits . . . 45
2.26 Records retention and audit trail: owners, retention rules, and deletion conditions . . . 46
2.27 Release and change-control gate: reuse approval, rollback, and change evidence . . . 47
2.28 Risk exception and acceptance memo: residual risk, owner approval, and review clock . . . 48
2.29 Learner support and accommodation plan: support rows, access barriers, and escalation . . . 49
2.30 Instructor question bank: prompts, evidence checks, and misconception probes . . . 50
2.31 Remediation backlog: issue owners, retest evidence, and closure boundaries . . . 51
2.32 Scholarship and governance stance: source posture, claim limits, and public-readiness boundary . . . 52
2.33 Verifier-first artifact evidence: build freshness, audits, and negative controls . . . 53
2.34 Orientation figures and course links: visual evidence, source flow, and navigation . . . 54
2.35 AGEINT pattern library: design-pattern rows, safe substitutions, and source identity . . . 80
2.36 Safety rail: accountable, synthetic, defensive, and evidence-bounded boundaries . . . 82
3 Method & Assurance Reference: claim evidence, safety gates, and refresh duties . . . 83
3.1 Source-construction and reporting protocol: discovery records and citation boundaries . . . 83
3.2 Claim calibration and statistical limits: artifact telemetry versus empirical evidence . . . 83
3.3 Method figures and course links: assurance visuals and navigation . . . 83
3.4 Capstone phase, artifact, and review-gate ladder: required handoff sequence . . . 83
3.5 Claim and evidence ledger: claim classes, evidence floors, and review duties . . . 83
3.6 Analytic workflow: question, evidence, challenge, and disposition . . . 84
3.7 Competency and mastery rubric: scoring dimensions and visible proof . . . 85
3.8 Refresh triggers and required actions: source, safety, and tool-change duties . . . 85
3.9 Safety boundary: accountable, synthetic, defensive, and evidence-bounded practice . . . 86
3.10 Mastery evidence standard: retained artifacts, reviewer challenge, and transfer . . . 86
4 FOUNDATIONS OF INTELLIGENCE TRADECRAFT . . . 87
4.1 FOUNDATIONS OF INTELLIGENCE TRADECRAFT learning spine and source route: unit purpose, module order, and evidence handoff . . . 87
5 The Nature of Intelligence . . . 92
5.1 Governed Intelligence Cycle and Dissemination Architecture frame for The Nature of Intelligence: source context, topic focus, and reader task . . . 92
5.2 Dissemination-and-Marking Control Lens path for The Nature of Intelligence: lesson cluster, safe artifact, and review . . . 94
5.3 The Nature of Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 100
6 Intelligence Community Architectures . . . 110
6.1 Analytic Tradecraft and Source Integrity frame for Intelligence Community Architectures: source context, topic focus, and reader task . . . 110
6.2 Dissemination-and-Marking Control Lens path for Intelligence Community Architectures: lesson cluster, safe artifact, and review . . . 112
6.3 Intelligence Community Architectures assurance handoff: evidence, governance, refresh, and capstone . . . 118
7 Tradecraft: Core Principles . . . 129
7.1 Governed Intelligence Cycle and Dissemination Architecture frame for Tradecraft: Core Principles: source context, topic focus, and reader task . . . 129
7.2 Structured-Judgment Lens path for Tradecraft: Core Principles: lesson cluster, safe artifact, and review . . . 131
7.3 Tradecraft: Core Principles assurance handoff: evidence, governance, refresh, and capstone . . . 137
8 HUMAN INTELLIGENCE (HUMINT) . . . 148
8.1 HUMAN INTELLIGENCE (HUMINT) learning spine and source route: unit purpose, module order, and evidence handoff . . . 148
9 Agent Recruitment . . . 152
9.1 Collection Management and Multi-INT Requirements Discipline frame for Agent Recruitment: source context, topic focus, and reader task . . . 152
9.2 Requirements-to-Evidence Lens path for Agent Recruitment: lesson cluster, safe artifact, and review . . . 154
9.3 Agent Recruitment assurance handoff: evidence, governance, refresh, and capstone . . . 160
10 Agent Handling and Management . . . 170
10.1 Collection Management and Multi-INT Requirements Discipline frame for Agent Handling and Management: source context, topic focus, and reader task . . . 170
10.2 Requirements-to-Evidence Lens path for Agent Handling and Management: lesson cluster, safe artifact, and review . . . 172

10.3 Agent Handling and Management assurance handoff: evidence, governance, refresh, and capstone . . . 179
11 Source Protection and CI Integration . . . 189
11.1 Counterintelligence and Source-Integrity Defense frame for Source Protection and CI Integration: source context, topic focus, and reader task . . . 189
11.2 Structured-Judgment Lens path for Source Protection and CI Integration: lesson cluster, safe artifact, and review . . . 191
11.3 Source Protection and CI Integration assurance handoff: evidence, governance, refresh, and capstone . . . 195
12 SIGNALS INTELLIGENCE (SIGINT) . . . 204
12.1 SIGNALS INTELLIGENCE (SIGINT) learning spine and source route: unit purpose, module order, and evidence handoff . . . 204
13 SIGINT Fundamentals . . . 208
13.1 Collection Management and Multi-INT Requirements Discipline frame for SIGINT Fundamentals: source context, topic focus, and reader task . . . 208
13.2 Requirements-to-Evidence Lens path for SIGINT Fundamentals: lesson cluster, safe artifact, and review . . . 210
13.3 SIGINT Fundamentals assurance handoff: evidence, governance, refresh, and capstone . . . 214
14 Modern SIGINT and Cryptography . . . 223
14.1 Collection Management and Multi-INT Requirements Discipline frame for Modern SIGINT and Cryptography: source context, topic focus, and reader task . . . 223
14.2 Requirements-to-Evidence Lens path for Modern SIGINT and Cryptography: lesson cluster, safe artifact, and review . . . 225
14.3 Modern SIGINT and Cryptography assurance handoff: evidence, governance, refresh, and capstone . . . 231
15 OPEN SOURCE INTELLIGENCE (OSINT) . . . 242
15.1 OPEN SOURCE INTELLIGENCE (OSINT) learning spine and source route: unit purpose, module order, and evidence handoff . . . 242
16 OSINT Foundations . . . 246
16.1 Open-Source and Geospatial Intelligence Integrity frame for OSINT Foundations: source context, topic focus, and reader task . . . 246
16.2 Requirements-to-Evidence Lens path for OSINT Foundations: lesson cluster, safe artifact, and review . . . 248
16.3 OSINT Foundations assurance handoff: evidence, governance, refresh, and capstone . . . 252
17 OSINT Techniques and Tools . . . 261
17.1 Open-Source and Geospatial Intelligence Integrity frame for OSINT Techniques and Tools: source context, topic focus, and reader task . . . 261
17.2 Requirements-to-Evidence Lens path for OSINT Techniques and Tools: lesson cluster, safe artifact, and review . . . 263
17.3 OSINT Techniques and Tools assurance handoff: evidence, governance, refresh, and capstone . . . 268
18 GEOINT and Imagery Intelligence . . . 278
18.1 Open-Source and Geospatial Intelligence Integrity frame for GEOINT and Imagery Intelligence: source context, topic focus, and reader task . . . 278
18.2 Requirements-to-Evidence Lens path for GEOINT and Imagery Intelligence: lesson cluster, safe artifact, and review . . . 282
18.3 GEOINT and Imagery Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 288
19 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS . . . 298
19.1 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS learning spine and source route: unit purpose, module order, and evidence handoff . . . 298
20 Cyber Intelligence Fundamentals . . . 302
20.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Cyber Intelligence Fundamentals: source context, topic focus, and reader task . . . 302
20.2 Defensive Cyber-Intelligence Lens path for Cyber Intelligence Fundamentals: lesson cluster, safe artifact, and review . . . 304
20.3 Cyber Intelligence Fundamentals assurance handoff: evidence, governance, refresh, and capstone . . . 311
21 Advanced Persistent Threats (APTs) . . . 324
21.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Advanced Persistent Threats (APTs): source context, topic focus, and reader task . . . 324
21.2 Defensive Cyber-Intelligence Lens path for Advanced Persistent Threats (APTs): lesson cluster, safe artifact, and review . . . 326
21.3 Advanced Persistent Threats (APTs) assurance handoff: evidence, governance, refresh, and capstone . . . 331
22 Supply Chain Intelligence Attacks . . . 341
22.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Supply Chain Intelligence Attacks: source context, topic focus, and reader task . . . 341
22.2 Software-Supply-Chain Assurance Lens path for Supply Chain Intelligence Attacks: lesson cluster, safe artifact, and review . . . 343
22.3 Supply Chain Intelligence Attacks assurance handoff: evidence, governance, refresh, and capstone . . . 349
23 Electronic and Emanations Intelligence . . . 360
23.1 Collection Management and Multi-INT Requirements Discipline frame for Electronic and Emanations Intelligence: source context, topic focus, and reader task . . . 360
23.2 Requirements-to-Evidence Lens path for Electronic and Emanations Intelligence: lesson cluster, safe artifact, and review . . . 362
23.3 Electronic and Emanations Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 366
24 IMAGERY AND FINANCIAL INTELLIGENCE . . . 377
24.1 IMAGERY AND FINANCIAL INTELLIGENCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 377
25 Imagery Intelligence (IMINT) . . . 381
25.1 Open-Source and Geospatial Intelligence Integrity frame for Imagery Intelligence (IMINT): source context, topic focus, and reader task . . . 381
25.2 Requirements-to-Evidence Lens path for Imagery Intelligence (IMINT): lesson cluster, safe artifact, and review . . . 385
25.3 Imagery Intelligence (IMINT) assurance handoff: evidence, governance, refresh, and capstone . . . 389
26 Financial Intelligence (FININT) . . . 399
26.1 Financial Intelligence and Economic-Security Due Diligence frame for Financial Intelligence (FININT): source context, topic focus, and reader task . . . 399
26.2 Economic-Security Due-Diligence Lens path for Financial Intelligence (FININT): lesson cluster, safe artifact, and review . . . 401
26.3 Financial Intelligence (FININT) assurance handoff: evidence, governance, refresh, and capstone . . . 406
27 PSYCHOLOGICAL OPERATIONS AND INFLUENCE . . . 417
27.1 PSYCHOLOGICAL OPERATIONS AND INFLUENCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 417
28 PSYOP and MISO Doctrine . . . 421
28.1 Cognitive Security and Influence Resilience frame for PSYOP and MISO Doctrine: source context, topic focus, and reader task . . . 421
28.2 Cognitive-Resilience Lens path for PSYOP and MISO Doctrine: lesson cluster, safe artifact, and review . . . 423
28.3 PSYOP and MISO Doctrine assurance handoff: evidence, governance, refresh, and capstone . . . 428
29 Active Measures and Disinformation . . . 438
29.1 Cognitive Security and Influence Resilience frame for Active Measures and Disinformation: source context, topic focus, and reader task . . . 438
29.2 Cognitive-Resilience Lens path for Active Measures and Disinformation: lesson cluster, safe artifact, and review . . . 440

29.3 Active Measures and Disinformation assurance handoff: evidence, governance, refresh, and capstone . . . 446
30 Social Engineering . . . 457
30.1 Cognitive Security and Influence Resilience frame for Social Engineering: source context, topic focus, and reader task . . . 457
30.2 Cognitive-Resilience Lens path for Social Engineering: lesson cluster, safe artifact, and review . . . 459
30.3 Social Engineering assurance handoff: evidence, governance, refresh, and capstone . . . 464
31 Information Warfare and Cognitive Security . . . 474
31.1 Cognitive Security and Influence Resilience frame for Information Warfare and Cognitive Security: source context, topic focus, and reader task . . . 474
31.2 Cognitive-Resilience Lens path for Information Warfare and Cognitive Security: lesson cluster, safe artifact, and review . . . 476
31.3 Information Warfare and Cognitive Security assurance handoff: evidence, governance, refresh, and capstone . . . 481
32 COUNTERINTELLIGENCE . . . 491
32.1 COUNTERINTELLIGENCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 491
33 Counterintelligence Fundamentals . . . 495
33.1 Counterintelligence and Source-Integrity Defense frame for Counterintelligence Fundamentals: source context, topic focus, and reader task . . . 495
33.2 Structured-Judgment Lens path for Counterintelligence Fundamentals: lesson cluster, safe artifact, and review . . . 497
33.3 Counterintelligence Fundamentals assurance handoff: evidence, governance, refresh, and capstone . . . 502
34 Counterintelligence Against Non-State Actors . . . 513
34.1 Counterintelligence and Source-Integrity Defense frame for Counterintelligence Against Non-State Actors: source context, topic focus, and reader task . . . 513
34.2 Structured-Judgment Lens path for Counterintelligence Against Non-State Actors: lesson cluster, safe artifact, and review . . . 515
34.3 Counterintelligence Against Non-State Actors assurance handoff: evidence, governance, refresh, and capstone . . . 519
35 GRAY ZONE, HYBRID WARFARE, AND NON-STATE ACTORS . . . 529
35.1 GRAY ZONE, HYBRID WARFARE, AND NON-STATE ACTORS learning spine and source route: unit purpose, module order, and evidence handoff . . . 529
36 Gray Zone Warfare . . . 533
36.1 Collection Management and Multi-INT Requirements Discipline frame for Gray Zone Warfare: source context, topic focus, and reader task . . . 533
36.2 Requirements-to-Evidence Lens path for Gray Zone Warfare: lesson cluster, safe artifact, and review . . . 535
36.3 Gray Zone Warfare assurance handoff: evidence, governance, refresh, and capstone . . . 539
37 Non-State Actor Intelligence . . . 550
37.1 Collection Management and Multi-INT Requirements Discipline frame for Non-State Actor Intelligence: source context, topic focus, and reader task . . . 550
37.2 Requirements-to-Evidence Lens path for Non-State Actor Intelligence: lesson cluster, safe artifact, and review . . . 552
37.3 Non-State Actor Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 556
38 Irregular Warfare and Special Operations . . . 567
38.1 Collection Management and Multi-INT Requirements Discipline frame for Irregular Warfare and Special Operations: source context, topic focus, and reader task . . . 567
38.2 Requirements-to-Evidence Lens path for Irregular Warfare and Special Operations: lesson cluster, safe artifact, and review . . . 569
38.3 Irregular Warfare and Special Operations assurance handoff: evidence, governance, refresh, and capstone . . . 574
39 HISTORICAL INTELLIGENCE SERVICES . . . 586
39.1 HISTORICAL INTELLIGENCE SERVICES learning spine and source route: unit purpose, module order, and evidence handoff . . . 586
40 Soviet and Russian Intelligence . . . 590
40.1 Historical and Declassified Intelligence Services frame for Soviet and Russian Intelligence: source context, topic focus, and reader task . . . 590
40.2 Historical Case-Translation Lens path for Soviet and Russian Intelligence: lesson cluster, safe artifact, and review . . . 592
40.3 Soviet and Russian Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 599
41 American Intelligence History . . . 611
41.1 Historical and Declassified Intelligence Services frame for American Intelligence History: source context, topic focus, and reader task . . . 611
41.2 Historical Case-Translation Lens path for American Intelligence History: lesson cluster, safe artifact, and review . . . 613
41.3 American Intelligence History assurance handoff: evidence, governance, refresh, and capstone . . . 621
42 British and Allied Intelligence . . . 634
42.1 Historical and Declassified Intelligence Services frame for British and Allied Intelligence: source context, topic focus, and reader task . . . 634
42.2 Historical Case-Translation Lens path for British and Allied Intelligence: lesson cluster, safe artifact, and review . . . 636
42.3 British and Allied Intelligence assurance handoff: evidence, governance, refresh, and capstone . . . 640
43 Israeli and Continental Services . . . 650
43.1 Historical and Declassified Intelligence Services frame for Israeli and Continental Services: source context, topic focus, and reader task . . . 650
43.2 Historical Case-Translation Lens path for Israeli and Continental Services: lesson cluster, safe artifact, and review . . . 652
43.3 Israeli and Continental Services assurance handoff: evidence, governance, refresh, and capstone . . . 657
44 AGEINT — AGENTIC INTELLIGENCE . . . 666
44.1 AGEINT — AGENTIC INTELLIGENCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 666
45 Foundations of AGEINT . . . 671
45.1 Agentic AI Governance and Tool Security frame for Foundations of AGEINT: source context, topic focus, and reader task . . . 671
45.2 Agentic Tool-Governance Lens path for Foundations of AGEINT: lesson cluster, safe artifact, and review . . . 673
45.3 Foundations of AGEINT assurance handoff: evidence, governance, refresh, and capstone . . . 680
46 AGEINT Design Patterns and Archetypes . . . 691
46.1 Agentic AI Governance and Tool Security frame for AGEINT Design Patterns and Archetypes: source context, topic focus, and reader task . . . 691
46.2 Agentic Tool-Governance Lens path for AGEINT Design Patterns and Archetypes: lesson cluster, safe artifact, and review . . . 694
46.3 AGEINT Design Patterns and Archetypes assurance handoff: evidence, governance, refresh, and capstone . . . 728
47 AGEINT Frameworks and Infrastructure . . . 750
47.1 Agentic AI Governance and Tool Security frame for AGEINT Frameworks and Infrastructure: source context, topic focus, and reader task . . . 750
47.2 Agentic Tool-Governance Lens path for AGEINT Frameworks and Infrastructure: lesson cluster, safe artifact, and review . . . 752
47.3 AGEINT Frameworks and Infrastructure assurance handoff: evidence, governance, refresh, and capstone . . . 764
48 AGEINT Security and Adversarial Considerations . . . 778
48.1 Agentic AI Governance and Tool Security frame for AGEINT Security and Adversarial Considerations: source context, topic focus, and reader task . . . 778

48.2 Defensive Cyber-Intelligence Lens path for AGEINT Security and Adversarial Considerations: lesson cluster, safe artifact, and review . . . 791
48.3 AGEINT Security and Adversarial Considerations assurance handoff: evidence, governance, refresh, and capstone . . . 801
49 Active Inference and AGEINT . . . 816
49.1 Active-Inference Theory and Governed Agent Analogy frame for Active Inference and AGEINT: source context, topic focus, and reader task . . . 816
49.2 Active-Inference Boundary Lens path for Active Inference and AGEINT: lesson cluster, safe artifact, and review . . . 819
49.3 Active Inference and AGEINT assurance handoff: evidence, governance, refresh, and capstone . . . 824
50 AGEINT Python Code Library . . . 836
50.1 Agentic AI Governance and Tool Security frame for AGEINT Python Code Library: source context, topic focus, and reader task . . . 836
50.2 Agentic Tool-Governance Lens path for AGEINT Python Code Library: lesson cluster, safe artifact, and review . . . 838
50.3 AGEINT Python Code Library assurance handoff: evidence, governance, refresh, and capstone . . . 844
51 COGNITIVE SECURITY . . . 855
51.1 COGNITIVE SECURITY learning spine and source route: unit purpose, module order, and evidence handoff . . . 855
51.2 Cognitive-security models: source scope before defensive use . . . 855
52 Cognitive Security: Foundations and Definitions . . . 861
52.1 Cognitive Security and Influence Resilience frame for Cognitive Security: Foundations and Definitions: source context, topic focus, and reader task . . . 861
52.2 Cognitive-Resilience Lens path for Cognitive Security: Foundations and Definitions: lesson cluster, safe artifact, and review . . . 863
52.3 Cognitive Security: Foundations and Definitions assurance handoff: evidence, governance, refresh, and capstone . . . 872
53 Neurocognitive Mechanisms of Cognitive Security . . . 885
53.1 Cognitive Security and Influence Resilience frame for Neurocognitive Mechanisms of Cognitive Security: source context, topic focus, and reader task . . . 885
53.2 Cognitive-Resilience Lens path for Neurocognitive Mechanisms of Cognitive Security: lesson cluster, safe artifact, and review 887
53.3 Neurocognitive Mechanisms of Cognitive Security assurance handoff: evidence, governance, refresh, and capstone . . . 894
54 Psychological Inoculation and Prebunking . . . 904
54.1 Cognitive Security and Influence Resilience frame for Psychological Inoculation and Prebunking: source context, topic focus, and reader task . . . 904
54.2 Cognitive-Resilience Lens path for Psychological Inoculation and Prebunking: lesson cluster, safe artifact, and review . . . 907
54.3 Psychological Inoculation and Prebunking assurance handoff: evidence, governance, refresh, and capstone . . . 914
55 Cognitive Security Operations . . . 925
55.1 Cognitive Security and Influence Resilience frame for Cognitive Security Operations: source context, topic focus, and reader task . . . 925
55.2 Cognitive-Resilience Lens path for Cognitive Security Operations: lesson cluster, safe artifact, and review . . . 927
55.3 Cognitive Security Operations assurance handoff: evidence, governance, refresh, and capstone . . . 932
56 EPISTEMIC RIGOR AND ANALYTIC TRADECRAFT . . . 942
56.1 EPISTEMIC RIGOR AND ANALYTIC TRADECRAFT learning spine and source route: unit purpose, module order, and evidence handoff . . . 942
56.2 An instructional epistemic coherence stack . . . 942
56.3 Reliability-inspired governance: analogy and test obligation . . . 943
57 Structured Analytic Techniques (SATs) . . . 948
57.1 Analytic Tradecraft and Source Integrity frame for Structured Analytic Techniques (SATs): source context, topic focus, and reader task . . . 948
57.2 Structured-Judgment Lens path for Structured Analytic Techniques (SATs): lesson cluster, safe artifact, and review . . . 954
57.3 Structured Analytic Techniques (SATs) assurance handoff: evidence, governance, refresh, and capstone . . . 963
58 Advanced Analysis Methods . . . 975
58.1 Analytic Tradecraft and Source Integrity frame for Advanced Analysis Methods: source context, topic focus, and reader task 975
58.2 Structured-Judgment Lens path for Advanced Analysis Methods: lesson cluster, safe artifact, and review . . . 980
58.3 Advanced Analysis Methods assurance handoff: evidence, governance, refresh, and capstone . . . 985
59 PRODUCTIVITY INTELLIGENCE AND COGNITIVE PERFORMANCE . . . 994
59.1 PRODUCTIVITY INTELLIGENCE AND COGNITIVE PERFORMANCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 994
60 The Intelligent Operator as Cognitive Athlete . . . 998
60.1 Operator Productivity and Cognitive Performance frame for The Intelligent Operator as Cognitive Athlete: source context, topic focus, and reader task . . . 998
60.2 Operator-Workload Hygiene Lens path for The Intelligent Operator as Cognitive Athlete: lesson cluster, safe artifact, and review . . . 1000
60.3 The Intelligent Operator as Cognitive Athlete assurance handoff: evidence, governance, refresh, and capstone . . . 1011
61 Information Architecture for Intelligence Work . . . 1025
61.1 Operator Productivity and Cognitive Performance frame for Information Architecture for Intelligence Work: source context, topic focus, and reader task . . . 1025
61.2 Operator-Workload Hygiene Lens path for Information Architecture for Intelligence Work: lesson cluster, safe artifact, and review . . . 1028
61.3 Information Architecture for Intelligence Work assurance handoff: evidence, governance, refresh, and capstone . . . 1033
62 INDUSTRIAL AND CYBER-PHYSICAL INTELLIGENCE . . . 1044
62.1 INDUSTRIAL AND CYBER-PHYSICAL INTELLIGENCE learning spine and source route: unit purpose, module order, and evidence handoff . . . 1044
63 Industrial Control Systems (ICS) and Operational Technology . . . 1048
63.1 ICS/OT Cyber-Physical Defense and Tabletop Readiness frame for Industrial Control Systems (ICS) and Operational Technology: source context, topic focus, and reader task . . . 1048
63.2 Cyber-Physical Readiness Lens path for Industrial Control Systems (ICS) and Operational Technology: lesson cluster, safe artifact, and review . . . 1051
63.3 Industrial Control Systems (ICS) and Operational Technology assurance handoff: evidence, governance, refresh, and capstone 1057

1 Abstract: Synthetic Analytic Tradecraft contract

AGEINT, or Agentic Intelligence, is a local curriculum-and-assurance atlas for teaching bounded AI-agent support inside intelligence education by making the machinery of Synthetic Analytic Tradecraft visible on the page. It converts SIST Guide TOC and Bibliography into **16 parts**, **51 modules**, **9 methods appendices**, **20 named AGEINT patterns**, and **312 parsed source-guide references** without renumbering inherited source identities, then asks the reader to inspect the same things an instructor or assurance reviewer would inspect: the part map that frames the domain, the module overview that names the learner task, the source spine that separates official, standards, scholarly, public-domain, practitioner, vendor, and provenance-only support while separating source quality from narrative fluency, the evidence packet that a student would retain, the reviewer challenge that should break a weak claim, and the validators that prevent a polished artifact from masquerading as a verified one. A learner does not enter through a slogan. The learner opens a module, sees which authority and source keys are allowed to carry the claim, reads a textbook primer that distinguishes observation from inference, confidence from probability, and source quality from fluency, works through a synthetic practice studio using classroom records, public declassified examples, owned-lab logs, toy datasets, rendered figures, or tabletop incidents, and then produces a bounded artifact with caveats, assumptions, alternatives, excluded actions, human review, rollback evidence, and refresh triggers written into the record before reuse. The method contract in Figure 19 shows that flow as a claim-to-evidence pathway rather than as an aspirational ethics statement: authority must be named before the task begins, source support must be traceable before a claim is promoted, unsafe action must be replaced by safe substitution, and agentic assistance must remain a drafting, retrieval, comparison, simulation, critique, or audit aid whose output is never treated as self-authenticating [Office of the Director of National Intelligence, 2015] [Central Intelligence Agency, 2009] [Jr., 2007]. AGEINT remains synthetic in its fixtures, not in its standards: the word synthetic is therefore a control, not a downgrade. AGEINT keeps the fixture safe while keeping the standard difficult: HUMINT, SIGINT, OSINT, GEOINT and IMINT, FININT, counterintelligence, cyber threat intelligence, cognitive security, agent orchestration, active inference, source verification, public-sector governance, privacy review, and industrial-control-system defense can be discussed because the student is not handed live targets, evasion recipes, exploit instructions, manipulation playbooks, covert-action procedures, or unsafe cyber-physical steps. When a source topic could invite misuse, the module turns the risky motif into a provenance card, detection-coverage note, rights-impact worksheet, model or dataset card, source-refresh memo, release gate, risk-exception log, remediation backlog, or debrief protocol, and the exercise fails if it cannot show where authority, data boundary, tool permission, uncertainty, and review enter the workflow. The source layer is intentionally conservative: Perplexity and similar discovery tools may suggest candidates, but the manuscript cites verified official, standards, public-domain, or scholarly anchors encoded in the source corpus and rebuilt into BibTeX; Practitioner, vendor, and blog sources inherited through the source guide, plus social or other guide-inherited rows, can preserve provenance context without becoming foundational support for governance, rights, safety, empirical, statistical, or performance claims unless a stronger verified source bears the specific point. The same source posture is visible in the counts: 10 source-quality anchors cover the governing standards and assurance spine, while 462 curated intelligence research anchors span the domain lanes that route claim-bearing prose to direct evidence rather than decorative citations. A strong AGEINT artifact is therefore not an uninspected essay. It is an evidence packet that names the question, allowed inputs, excluded actions, source keys, claim type, caveats, competing explanations, confidence basis, prompt or run card, tool allowlist, data boundary, stop condition, reviewer challenge, safety boundary, refresh trigger, and human disposition. It also contains negative controls: stale citations that should be caught, weak-source-only claims that should be downgraded, figure positions or colors that should not be mistaken for quantitative evidence, overbroad statistical language that should fail, and operational substitutions that should halt until an instructor or reviewer approves a safer artifact. A reviewer can trace a finished packet in both directions: from a polished sentence back to the claim class, source family, cited anchor, caveat, and source-refresh duty, or from a source row forward to the modules, figures, tables, and exercises that rely on it. A student can see why a governance claim needs law, policy, standard, or official guidance support; why a cyber or industrial-control-system scenario must remain defensive and synthetic; why a social or cognitive-security lesson must become resilience education rather than persuasion practice; why a vendor or practitioner note can motivate a question but cannot by itself carry a public-rights or safety assertion; why a figure caption must say whether arrows are explanatory or quantitative; and why a model-generated draft is only useful after it has been constrained by authority, reviewed by a person, and attached to evidence that another person can contest. The early orientation pages, part maps, chapter landmarks, appendices, bibliography atlas, source-lane map, and generated reports are designed to make that trace visible instead of leaving it to instructor memory. They show the learner what to keep: the source keys behind each claim, the reason a safer substitute was chosen, the assumption that would change the answer, the dissent that should not be smoothed away, the review note that records who accepted residual risk, the rollback path if a source or permission changes, and the refresh trigger that turns a current claim back into a review item. They also show what the curriculum refuses to keep: unverifiable authority theater, live-target instructions, metric-looking diagrams without units or denominators, statistical decorations without empirical design, citation clusters that do not bear the sentence they decorate, and agent outputs whose provenance cannot be reconstructed. The technical build is part of that scholarship. Curriculum shards generate semantic manuscript files; cross-references use label-backed section and figure links, and display equations are typeset from source for reproducible math; citations route through Pandoc keys; figures are registry-backed PNG assets with captions, alt text, long descriptions, provenance, hashes, and visual-semantics metadata; source anchors carry explicit lane and tier fields; claim calibration audits high-risk empirical, statistical, governance, safety, visualization, artifact-readiness, and formalism language; scholarship and source-metadata reports expose review warnings instead of hiding them; PDF audits check stale output, URI targets, file actions, and banned filler language. The analysis-validation matrix in Figure 20 names which claim classes require empirical evidence, direct source-family support, negative controls, figure semantics, or rendered-artifact checks before they can be treated as ready, and that matrix is a boundary on what the manuscript can honestly say. AGEINT is not a benchmark and does not claim to measure AGEINT performance, model capability, analyst replacement, learning outcomes, operational effectiveness, public-sector impact, statistical significance, or safety performance; page counts, citation counts, figure counts, validator passes, and link audits are artifact telemetry, not empirical outcome evidence. Its strongest claim is methodological and inspectable: agentic assistance can be taught inside intelligence education when every reuse path is forced through authority, source support, safe substitution, evidence packet, negative controls, human review, rollback, and refresh triggers, and when the safest failure mode is to stop, document the unresolved condition, and ask for review. The resulting work should be read as a Synthetic Analytic Tradecraft atlas, not as a public-release certificate or a disguised operational manual: the reader can see the source key behind a sentence, the caveat behind a confidence statement, the assumption behind a scenario, the blocked use behind a tempting automation, the challenge behind a polished answer, the caption that limits a visual, the validator that rejects an overclaim, and the refresh duty that keeps current-source prose from becoming stale authority.

2 Curriculum Orientation: reader paths, evidence maps, and safety gates

AGEINT (Agentic Intelligence) is a curriculum-and-assurance atlas for teaching how AI agents can *assist* intelligence analysis without ever being trusted to run it unsupervised. It is written for three readers: an **instructor** assembling a defensible course, a **learner** building analytic habits on safe practice material, and an **assurance reviewer** checking that every claim can be traced back to a real source. Nothing here is operational — every exercise uses synthetic or public material, and every claim is built to be challenged rather than believed.

For a first session, go directly to Section 2.3 and use its proposed 75-minute route; no atlas survey is required. For a longer course, Section 2.4 helps select a domain part. Section 2.36 states the boundary for both routes.

> **For maintainers.** This page is generated. The source templates under `docs/manuscript/templates/` keep guide-derived values — titles, labels, counts, source spines, semantic paths, and bibliography rows — as neutral tokens; the build resolves them from `data/curriculum/` into the rendered manuscript in `output/manuscript/`. Edit the template, not the rendered output.

The rest of this orientation is a toolkit for navigating that map; the next section shows the exact path.

2.1 How to use this atlas: navigation path, evidence checks, and verifier handoff

For a single session, start with Section 2.3 and the completed case in Section 3.6. For a course, use Section 2.4 and Figure 5 to choose a part, then follow its module overviews to a practice studio, evidence contract, governance boundary, and assessment. Consult Section 80 when checking source identity, provenance, support role, and refresh context—not as required preliminary reading.

Step	Where to go	Why this step matters
Start here	Section 2.4, Section 2.2, and Section 2.3	Choose a domain part, name the Synthetic Analytic Tradecraft contract, and decide which reader path governs the next move.
Then check	Section 2.7, Section 2.12, and Section 80	Match the claim class to evidence, lane, citation identity, and refresh duty before treating prose or figures as support.
Before you trust	Section 2.13, Section 2.34, and Section 3	Confirm risky motifs were converted to bounded artifacts, figures carry their limits, and verifier reports agree with the rendered manuscript.
Govern and assure	Section 2.18, Section 2.23, Section 2.24, and Section 2.26	Bind rights impact, red-team challenge, documentation provenance, and retention duty to each reusable artifact before it leaves the course.

Claim classes are separated at source-selection time. Governance claims, technical and theoretical claims, empirical capability claims, and source-construction claims each need a matching evidence type; the shared method reference records the PRISMA-S-inspired source-reporting fields used when a search or discovery process supports manuscript content [Melissa L. Rethlefsen, Shona Kirtley, Siw Waffenschmidt, Ana Patricia Ayala, David Moher, Matthew J. Page, Jonathan B. Koffel, and the PRISMA-S Group, 2021].

The opening route visual turns the atlas handoff into a concrete reader choice: select the role, keep the evidence trace, and move to the next section with the right verifier question already named. See Figure 1.

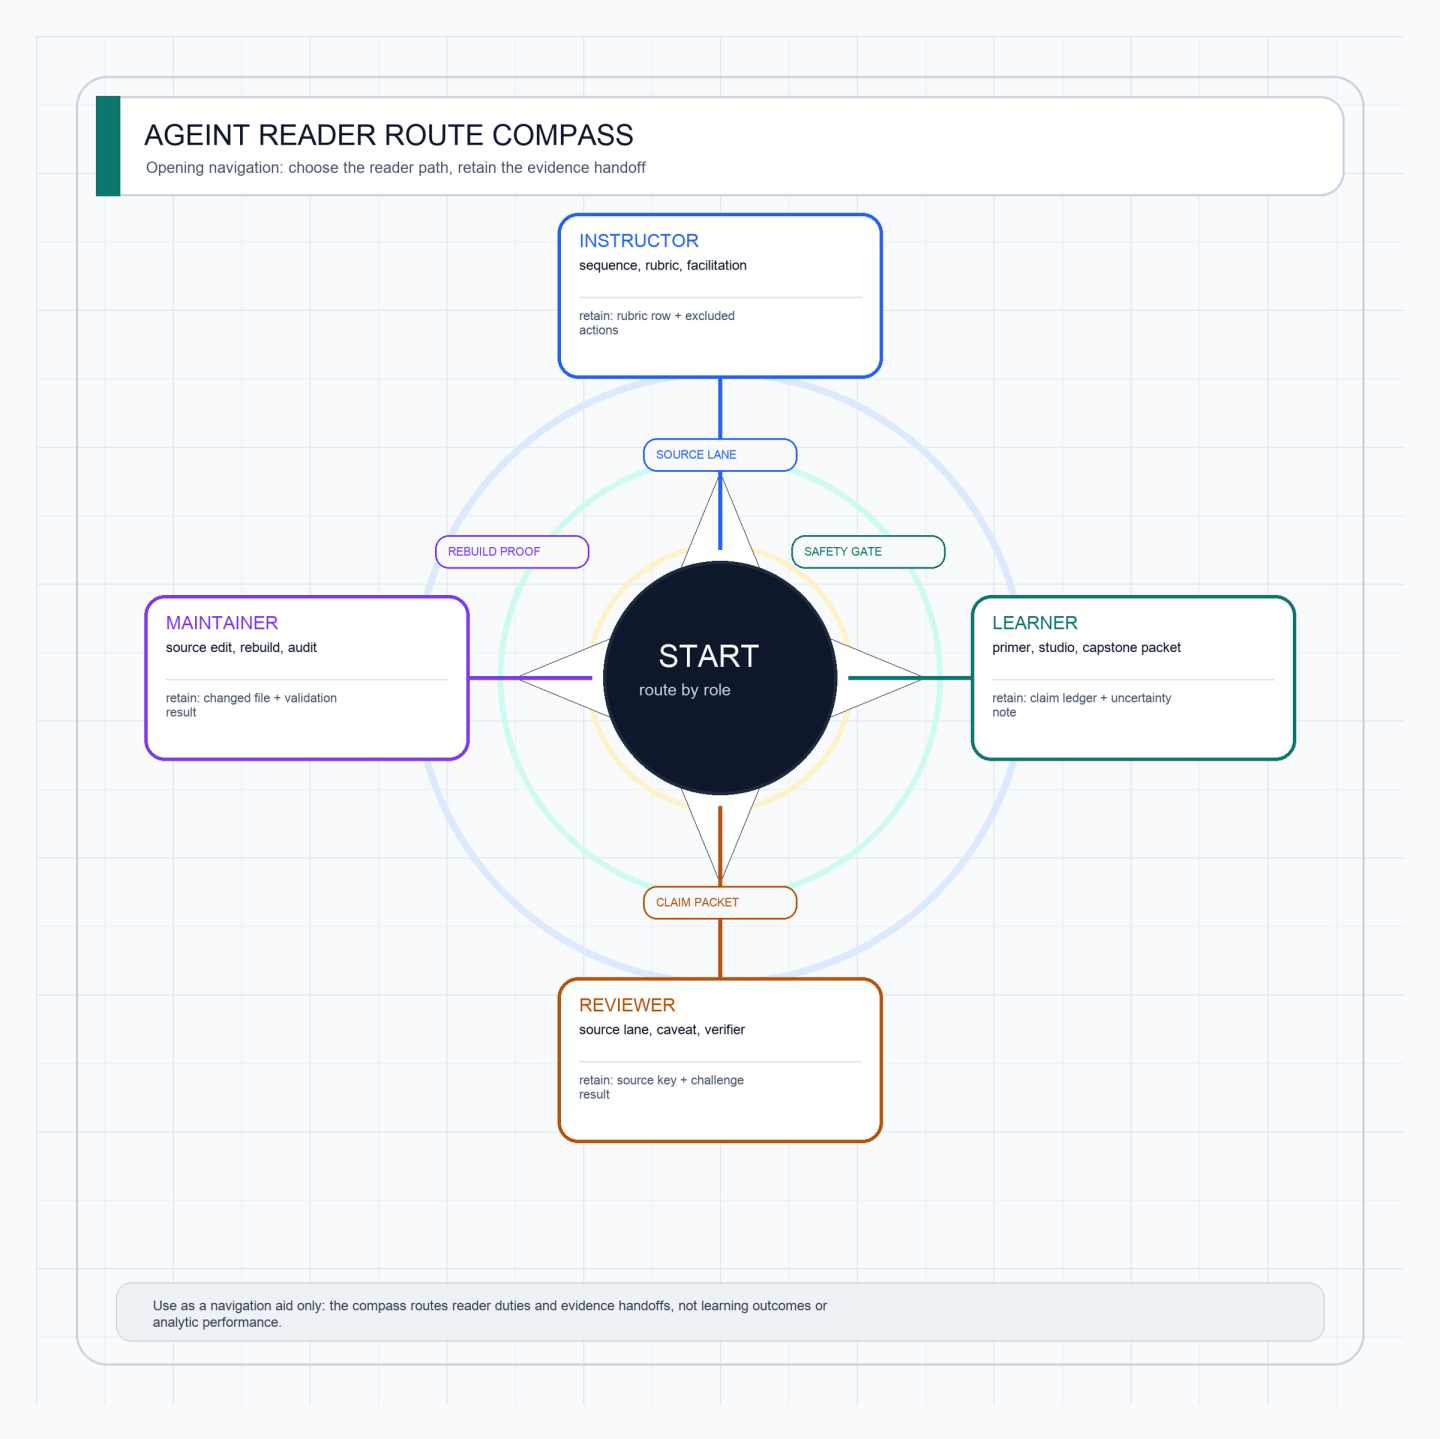

Figure 1: Opening navigation compass for the AGEINT orientation. It separates the instructor, learner, assurance reviewer, and maintainer routes and pairs each with the evidence trace that should survive the next reading move, so a reader can choose a path and know what to carry into the following section. It is navigation support, not a learning-outcome or performance claim.

2.2 Synthetic Analytic Tradecraft thesis: synthetic fixtures, source discipline, and reviewable claims

AGEINT is strongest when read as **Synthetic Analytic Tradecraft**: a governed practice for using synthetic inputs, generated artifacts, and bounded agentic assistance to make analytic reasoning inspectable before any real-world action is considered. The synthetic layer supplies safe fixtures: toy records, public declassified examples, instructor-provided evidence cards, owned-lab logs, and rendered figures. The tradecraft layer supplies the harder standard: source description, alternative hypotheses, assumption checks, probability/confidence separation, dissent, and reviewer challenge [Office of the Director of National Intelligence, 2015]; [Central Intelligence Agency, 2009]; [Jr., 2007].

This framing tells you exactly what to expect — and what not to. AGEINT is not an operational manual and not a benchmark proving autonomous analytic performance. It is a source-governed workbench for producing reviewable analytic artifacts under synthetic conditions. The relevant question is whether a module can leave behind a traceable evidence packet that another analyst, instructor, or assurance reviewer can challenge: source keys, caveats, assumptions, alternatives, confidence basis, negative controls, rights constraints, and refresh triggers.

One short example makes the standard concrete. Studying a synthetic leaked-document fixture, a learner does not write *the document is authentic*. They write a packet: *source* = the synthetic tabletop fixture they were given; *claim type* = provenance assessment; *confidence* = moderate, because the metadata is internally consistent but cannot be independently checked; *alternative* = the document was fabricated to mislead; *refresh trigger* = re-open the judgment if a primary source is released. That record — not the verdict — is the deliverable AGEINT teaches.

The tradecraft figures make this claim visible, and all are assembled together in Section 2.34: the governed system map Figure 18 shows the whole governed stack; the analytic evidence ladder Figure 121 separates doctrine, reform, postmortem, empirical, and forecasting evidence; the SAT evidence boundary Figure 122 prevents universal debiasing claims; the SAT method contract Figure 19 binds source-family triangulation, synthetic fixtures, analytic field separation, negative-control testing, reviewer challenge, and artifact-evidence reporting. Here triangulation requires tracing upstream evidence, not just counting publishers or source types: an official standard and a scholarly article may repeat the same underlying study. A standard can support a normative requirement without demonstrating its empirical effectiveness; an empirical study supports only the result and scope its methods warrant. Record those support relations separately. The first-principles decomposition Figure 123 forces observation, inference, assumption, likelihood, confidence, dissent, and decision boundary fields to remain separate.

These four commitments are the reader-facing grouping of the six contract fields drawn in Figure 19: source-family triangulation and synthetic fixtures sit under the first two rows below, analytic-field separation and negative-control testing under the next two, and reviewer challenge and artifact-evidence reporting under the last two.

SAT commitment	How AGEINT implements it	Early audit surface
Synthetic before operational	Exercises use classroom fixtures, public or declassified examples, owned-lab traces, and tabletop records.	Section 2.36 and Section 2.13
Tradecraft before automation	Agent assistance must preserve source descriptors, alternatives, assumptions, probability/confidence boundaries, and reviewer challenge.	Figure 122 and Section 3
Evidence packet before claim	Claims need source keys, caveats, source-family triangulation, claim-calibration review, and refresh duties before reuse.	Figure 19, Figure 17, and Figure 23
Negative control before trust	Validators, rubrics, rendered PDFs, and figure registries are treated as attackable artifacts.	Figure 128 and Section 2.33

The workbench visual makes the Synthetic Analytic Tradecraft thesis inspectable by showing how safe fixtures become reviewable claim packets rather than operational instructions; it is a classroom artifact route, not evidence of field capability. See Figure 2.

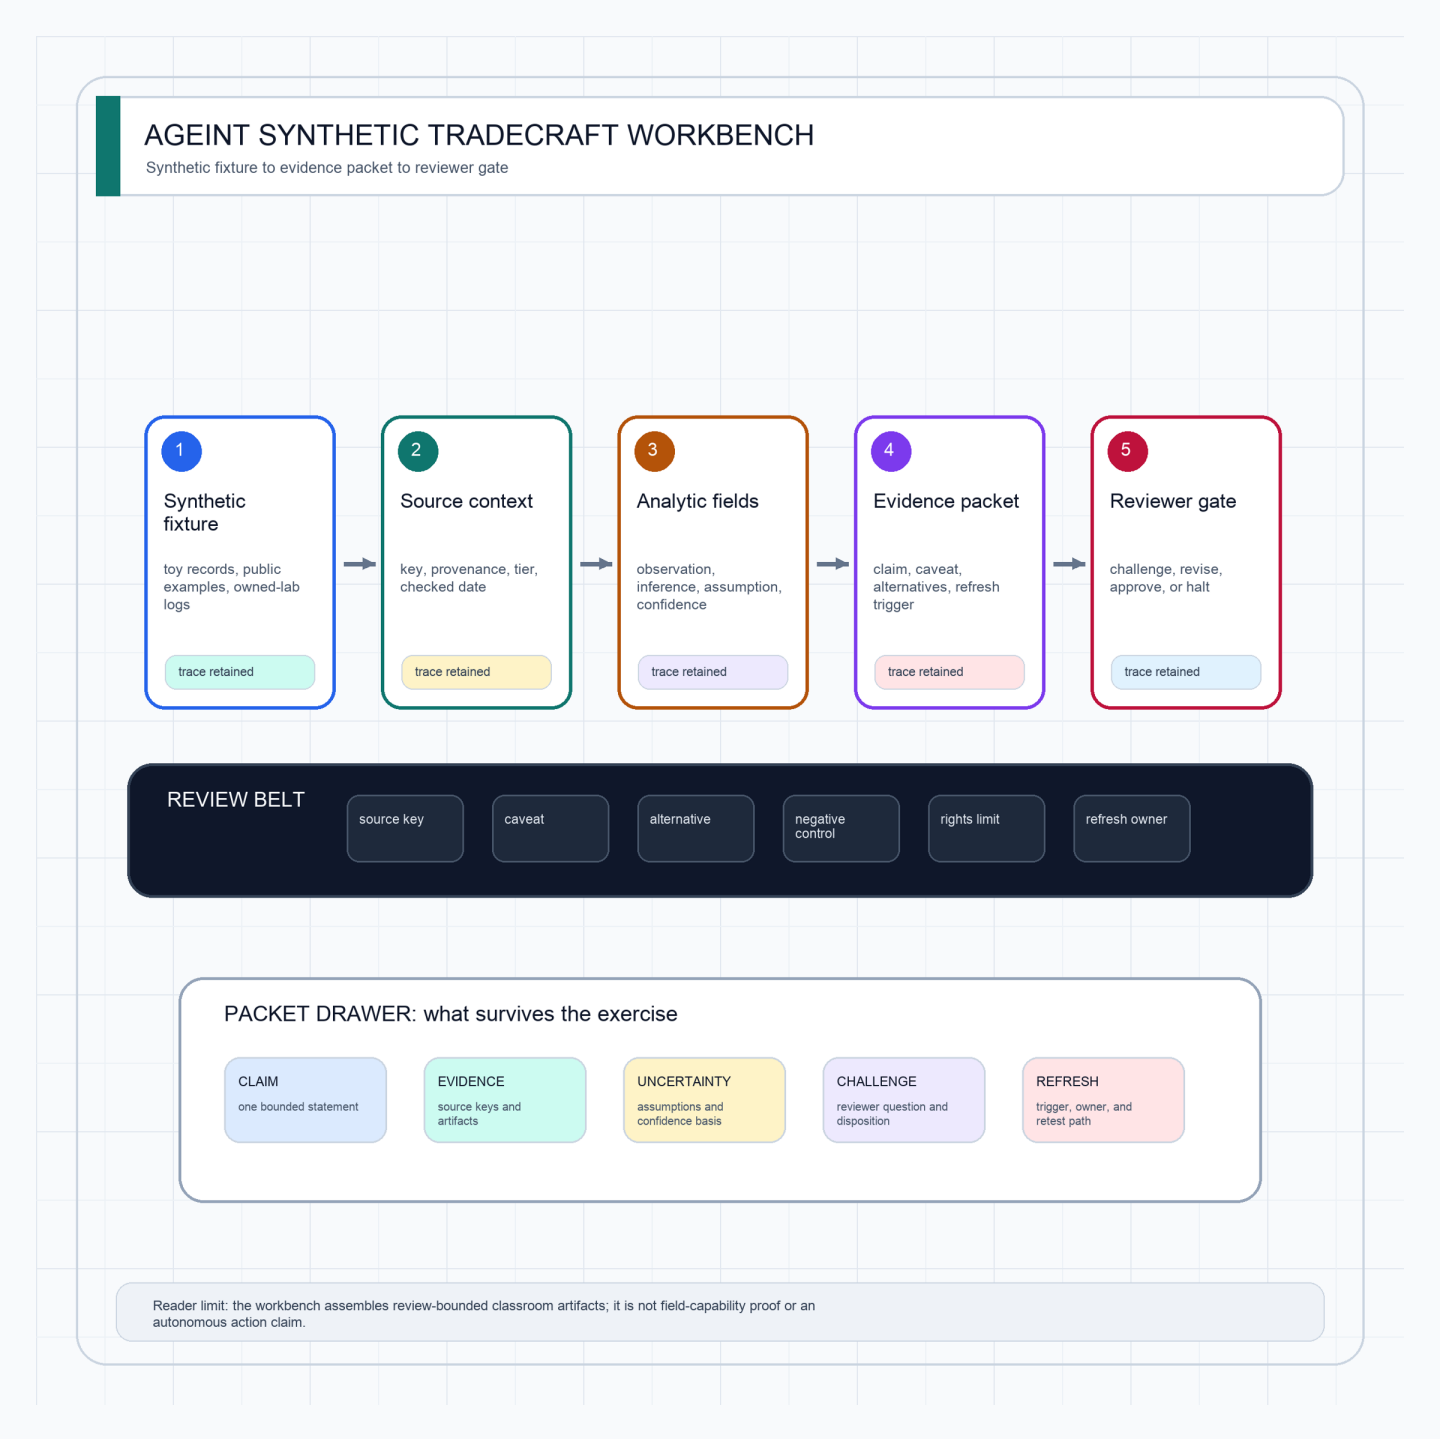

Figure 2: Workbench-style assembly line for Synthetic Analytic Tradecraft. It shows how a synthetic fixture becomes a source description, an analytic field set, a bounded claim packet, and a reviewer-gate disposition, tracing the path a classroom exercise takes from raw material to a record another analyst can challenge. It is a classroom artifact route, not an autonomous action claim or field-capability proof.

2.3 Reader paths: instructor, learner, reviewer, and maintainer handoffs

Reader	Fast path	Evidence to keep
Instructor	Pair the linked part introduction from Section 2.4 with each module's overview, practice studio, evidence contract, and governance boundary, confirm role ownership in Section 2.22, then set the assessment route from Section 2.20 before assigning a studio exercise built toward Section 2.14.	rubric row, excluded-action note, and source refresh trigger
Learner	Follow the module sequence from primer to practice studio, evidence contract, and governance boundary, then meet the assessment route in Section 2.20 before drafting a capstone packet against Section 2.14.	claim ledger entry, uncertainty note, and blocked-use statement
Assurance reviewer	Trace each material claim through Section 2.12, Section 80, Section 2.18, Section 2.34, and Section 2.33.	source key, review owner, caveat, and reproducible artifact path
Builder or maintainer	Treat generated output as an audit surface; update data, templates, manifest code, or figure specs, then rebuild and compare verifier reports.	changed source file, regeneration command, and validation result

Proposed first session: one reviewable claim in 60–90 minutes. The following 75-minute allocation is a teaching proposal, not an evaluated learning-outcome claim. Use the eight-step procedure, claim-record schema, and completed synthetic case in Section 3.6; do not read the rest of the atlas first.

Input packet and roles. Supply the case question, its initial evidence cards with locators and origin information, a blank claim record, the safety boundary, and a short rubric. Keep the completed answer and challenge card separate until review. Assign a human facilitator, analyst, and reviewer; pairs can share facilitation, but a person other than the author must review the final record. A solo learner can draft now and obtain that human review before reuse.

Suggested time	Learner action	Evidence retained
5 minutes	Read the question and excluded actions; agree on the permitted classroom audience.	Scope and blocked-use statement.
10 minutes	Inspect the supplied records and trace shared origins.	Source-origin map with exact locators and missing information.
20 minutes	Apply the procedure to one claim, separating observation, inference, assumptions, alternatives, likelihood, and confidence.	Draft claim record; unsupported conclusions may remain on hold.
10 minutes	Exchange with a reviewer who checks the passages and the strongest alternative.	Specific source-to-claim challenge and requested correction.
15 minutes	Receive the withheld contradictory card and run the duplicate/removal controls in the linked case.	Before/after record and explanation of what changed or properly stayed unchanged.
15 minutes	Debrief, revise, and obtain a human disposition.	Versioned claim packet marked accept for bounded classroom reuse, revise, hold, or reject, with owner and refresh trigger.

The deliverable is the claim record, source-origin map, challenge log, and signed human disposition—not a polished brief. Debrief by asking which evidence actually supported the claim, whether a copied report inflated confidence, what the contradiction changed, and what next observation could resolve the remaining uncertainty. Neither source count nor fluent writing earns acceptance.

Use selectable text, large print or read-aloud cards, text equivalents for figures, and written, spoken, or dictated responses against the same evidence criteria. Adjust pacing and breaks; speed is not assessed. Printed cards and a paper ledger provide a complete offline/manual route. Agent use is optional, must be declared if used, and cannot replace source inspection or human review. No accounts, network access, live systems, or personal data are needed.

Scale the same packet, not the paperwork. A single session ends with one reviewed claim. A module adds its domain sources, studio task, and governance boundary, then revises the same record. A unit capstone integrates the reviewed module claims into the packet in Section 2.14, checks dependencies across claims, and assigns a separate human reuse decision. Preserve unresolved claims and dissent rather than upgrading them merely because the course grew.

2.4 Curriculum map: parts, modules, and source-backed route choices

Curriculum area	Part intro	Modules	Unit map	Runtime source
Foundations of Intelligence Tradecraft	Section 4	3	Figure 30	parsed source guide
Human Intelligence (HUMINT)	Section 8	3	Figure 36	parsed source guide
Signals Intelligence (SIGINT)	Section 12	2	Figure 41	parsed source guide
Open Source Intelligence (OSINT)	Section 15	3	Figure 45	parsed source guide
Technical Intelligence and Cyber Operations	Section 19	4	Figure 52	parsed source guide
Imagery and Financial Intelligence	Section 24	2	Figure 58	parsed source guide
Psychological Operations and Influence	Section 27	4	Figure 64	parsed source guide
Counterintelligence	Section 32	2	Figure 70	parsed source guide
Gray Zone, Hybrid Warfare, and Non-state Actors	Section 35	3	Figure 74	parsed source guide
Historical Intelligence Services	Section 39	4	Figure 79	parsed source guide
AGEINT — Agentic Intelligence	Section 44	6	Figure 85	parsed source guide
Cognitive Security	Section 51	4	Figure 107	parsed source guide
Epistemic Rigor and Analytic Tradecraft	Section 56	2	Figure 116	parsed source guide
Productivity Intelligence and Cognitive Performance	Section 59	2	Figure 129	parsed source guide
Industrial and Cyber-physical Intelligence	Section 62	5	Figure 134	parsed source guide
Legal, Ethical, and Oversight Frameworks	Section 68	2	Figure 143	parsed source guide

2.5 Runtime inventory: generated counts, anchors, and method appendices

These counts describe the size of the build, not its quality. They let a maintainer confirm a rebuild produced the expected inventory and let a reader gauge scope; they are not a performance, coverage, or learning-outcome claim (see Section 2.32).

Derived artifact	Runtime value
Curriculum parts	16
Curriculum modules	51
Methods appendices	9
AGEINT patterns	20
Parsed references	312
Official source-quality anchors	10
Intelligence research anchors	462
Intelligence practice lenses	14

The source constellation visual ties the runtime inventory back to the evidence families and lanes that govern source choice, caveat language, and refresh duties. See Figure 3.

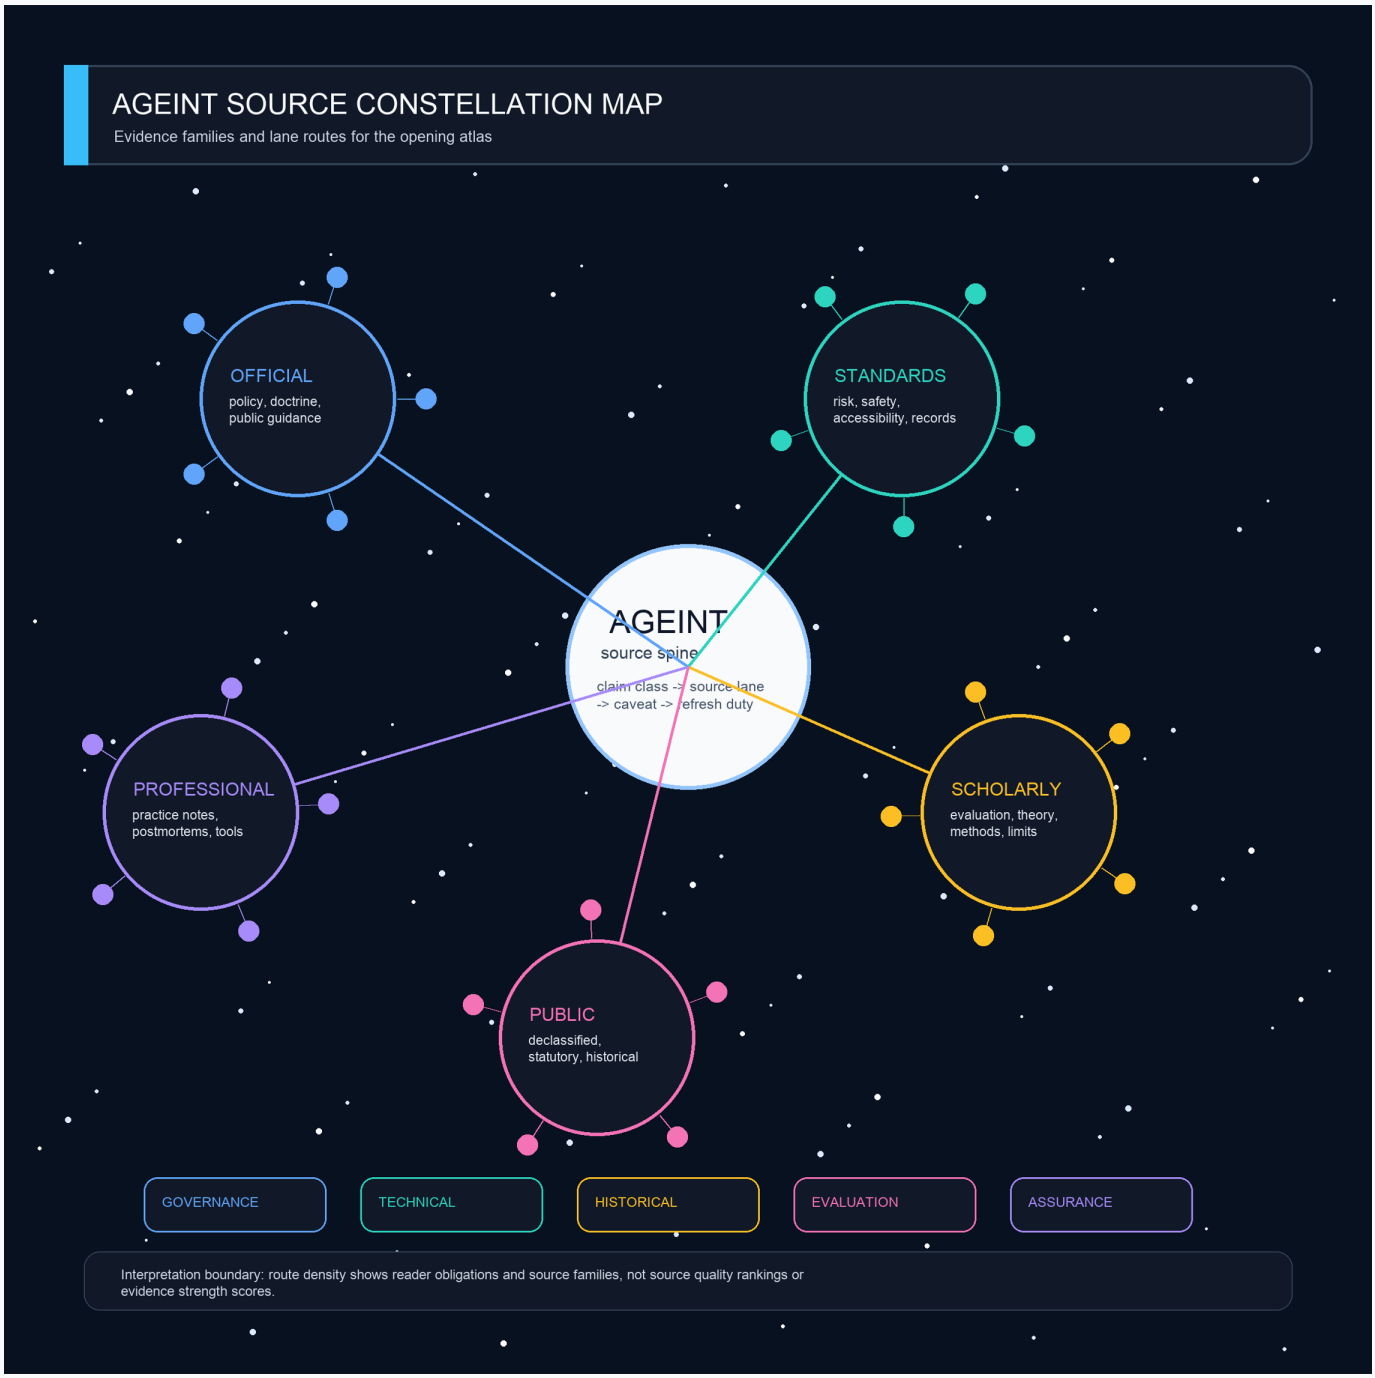

Figure 3: Source-family constellation for early orientation. It places the official, standards, scholarly, public, and professional evidence families around the AGEINT source spine so a reader can route governance, technical, historical, evaluation, and assurance claims to the lane whose evidence actually supports them. Route density shows coverage, not a ranking of source quality or evidence strength.

2.6 Related work and contribution boundary: adjacent literatures and AGEINT limits

AGEINT sits between several bodies of work rather than inside only one of them: AI risk-management guidance, generative-AI profiles, public-sector agentic-AI controls, model and dataset documentation practices, active-inference theory, agent security, and source-reporting methods [National Institute of Standards and Technology, 2023a]; [National Institute of Standards and Technology, 2024d]; [Treasury Board of Canada Secretariat, 2026a]; [Mitchell et al., 2019]; [Gebru et al., 2021]; [Pushkarna et al., 2022]; [Friston, 2010]; [Buckley et al., 2017]; [Greshake et al., 2023]; [Melissa L. Rethlefsen, Shona Kirtley, Siw Waffenschmidt, Ana Patricia Ayala, David Moher, Matthew J. Page, Jonathan B. Koffel, and the PRISMA-S Group, 2021]. Its contribution is not a new agent architecture, cognitive theory, attack benchmark, or measured learning outcome. The contribution is a versioned curriculum-and-assurance framework that links source identity, claim classes, safe exercises, figures, capstone artifacts, and rebuildable review gates for bounded agentic-intelligence education.

The four-domain convergence map Figure 8 makes that boundary visible. Synthetic-intelligence support is treated as useful only when analytic tradecraft standards, OPSEC and zero-trust constraints, and cognitive-security safeguards remain separate review gates [Dylan and Stivang, 2025]; [Caballero and Jenkins, 2024]; [McMahon, 2024]; [The White House, National Security Decision Directive 298, 1988]; [National Institute of Standards and Technology, 2020b]; [Wardle and Derakhshan, 2017]; [Terp and Breuer, 2022]. The map therefore routes AI, OPSEC, and cognitive-security claims into source-backed classroom artifacts while blocking autonomous strategic-judgment claims, manipulation guidance, live-targeting workflows, and unsupported efficacy claims.

2.7 Analysis validation protocol: claim classes, evidence packets, and failure modes

The manuscript now treats analysis validation as a reader-facing method, not a private build habit. Each major claim class must name the evidence packet that would make it reviewable, the validation question a reviewer should ask, and the failure mode that would force warning or remediation. The analysis validation matrix Figure 20 is the compact visual form of that protocol: design guidance needs a source family and caveat; empirical or evaluation claims need a study, metric, or benchmark; governance claims need law, standard, or rights-impact support; figure claims need registry text, rendered pixels, and link-safe PDF output; artifact-readiness claims need fresh builds and current audits; reviewer dispositions need a task ledger and negative control.

The claim-calibration verifier adds a machine-checkable screening layer Figure 23. Citation counts, figure counts, link checks, and validator pass states describe artifact properties, not semantic support, learning outcomes, operational performance, or safety. Its wording rules and source metadata can flag review candidates; a green audit does not establish that a passage entails a claim, sources are independent, or contradictory evidence was considered. A human must inspect the source-to-claim link and record a disposition using Section 3.6.

Claim class	Validation question	Required evidence	Failure mode
Design guidance	Is the claim framed as proposed guidance rather than measured performance?	source-family support, caveat, and bounded conclusion	architecture prose is promoted into empirical proof
Empirical or evaluation claim	Does a cited study, metric, benchmark, or evaluation source directly support the claim?	method source, limitation note, and refresh trigger	measured language appears without direct evaluation evidence
Governance or rights claim	Which law, standard, public guidance, or rights-impact source constrains the advice?	source lane, affected group, owner, residual risk	compliance language appears as unsupported assurance
Figure or visualization claim	Does the visual carry readable text, alt text, provenance, and an inspectable source section?	registry row, PNG metadata, caption, long description	a figure works only as decoration or inaccessible evidence
Artifact readiness claim	Are manuscript, citations, figures, references, and PDF links from the same rebuild?	artifact-evidence manifest, rendered-reference audit, PDF audit	stale output or Markdown-file links certify as ready
Reviewer disposition	What would make this row pass, warn, fail, or reopen?	negative control, closure evidence, task owner	a green check hides the decision rule

The assurance cockpit visual summarizes how a reader should interpret local build telemetry: useful for routing review effort, but bounded by the generated audits that carry the authoritative pass, warn, or block state. See Figure 4.

Figure 4: Audit-tile orientation cockpit for local readiness. It groups build freshness, reference quality, source metadata, refresh posture, figure quality, and the publication-readiness boundary into reader-facing tiles that route review effort to the right verifier. The tiles are schematic orientation only; authoritative status — the pass, warn, or block state — lives in the generated audits, not in this figure.

2.8 Consolidated glossary and index: terms, audit surfaces, and reader routing

Use this compact index to route common terms to the right audit surface before reading a chapter in detail.

Term	Working meaning	Primary audit surface
Source lane	The provenance, source tier, and refresh context that govern a claim.	Section 2.12 and Section 80
Source tier	The evidence role assigned to a source: official, standards, scholarly, practitioner, vendor, historical, or source-guide context.	Section 2.11 and source annotations
Synthetic Analytic Tradecraft	The controlled use of synthetic fixtures and bounded agent support to make analytic reasoning, evidence, uncertainty, dissent, and review gates inspectable.	Section 2.2 and Figure 19
Analysis validation	The review protocol that maps claim class, validation question, evidence packet, failure mode, and disposition before a claim can be treated as ready.	Section 2.7 and Figure 20
Claim ledger	A reviewable record of claim, evidence, caveat, confidence, and owner.	Section 2.32 and Section 2.14
Safe substitution	A replacement of unsafe operational action with synthetic, public, tabletop, or governance work.	Section 2.13
Reviewer gate	A named human approval or challenge point before reuse, presentation, or tool execution.	Section 2.20 and Section 2.23
Figure registry	The reproducible map from figure label to generated asset, caption, and source section.	Section 2.34

2.9 Intelligence research profiles: domain lanes, source roles, and profile routing

Profile	Anchor count	Core contract
Governed Intelligence Cycle and Dissemination Architecture	58	requirements, data provenance, analytic judgments, markings, dissemination permissions, records obligations, and feedback remain separable artifacts
Analytic Tradecraft and Source Integrity	110	every agent output must preserve evidence, assumptions, judgments, likelihood, confidence, dissent, empirical limits, and change history as separable fields
AI Ethics, Data Governance, and Civil-Liberties Review	78	data, model, prompt, output, evaluator, accountable human, audit evidence, and retention rule are independently inspectable and versioned
Agentic AI Governance and Tool Security	106	agents, tools, credentials, memory, retrieval stores, policies, and logs remain separately inspectable and revocable components
Open-Source and Geospatial Intelligence Integrity	51	collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable
Collection Management and Multi-INT Requirements Discipline	58	requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable
Financial Intelligence and Economic-Security Due Diligence	37	entities, transactions, sanctions programs, red flags, supplier evidence, legal constraints, and analytic judgments remain separately reviewable
Counterintelligence and Source-Integrity Defense	55	identity, access, reporting, corroboration, caveats, and confidence are modeled independently so defensive review can happen without exposure
Cognitive Security and Influence Resilience	62	separate descriptive analysis, normative assessment, response options, and protected-audience considerations
Active-Inference Theory and Governed Agent Analogy	12	formal claim, pedagogical analogy, implementation assumption, evaluation evidence, and governance duty remain distinct fields
Historical and Declassified Intelligence Services	22	archive source, release channel, historical context, analytic lesson, oversight implication, and modern analogy remain explicitly separated
Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense	69	indicators, TTP mappings, affected assets, supplier evidence, response actions, and sharing constraints remain independently reusable
ICS/OT Cyber-Physical Defense and Tabletop Readiness	33	separate cyber indicators, engineering observations, safety impacts, operator decisions, and recovery actions
Legal, Ethical, and Oversight Architecture	74	policies, approvals, audit logs, evidence, and action permissions remain linked but independently inspectable
Operator Productivity and Cognitive Performance	3	requirements queues, workload signals, focus blocks, evidence packets, and reviewer checkpoints remain separable artifacts

2.10 Intelligence practice lenses: artifact expectations, safety checks, and review questions

Practice lens	Evidence artifact	Validation rule	Safety check
Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	verify source authority, public/classification status, CAPCO-safe vocabulary, audience need, and records disposition before reuse	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	show priority, authority, minimization, corroboration, and source quality before any claim is reused	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
AI/Data Accountability Lens	AI/data impact card with authority, provenance, model version, impact score, register status, human owner, and review cadence	confirm lawful data use, limitations, bias and accuracy testing, public-register fit, human accountability, and rights escalation	reject automated adverse action, hidden surveillance expansion, unowned outputs, unreviewed model drift, and opaque downstream reuse
Active-Inference Boundary Lens	theory-to-governance card with source, analogy limit, assumption, reviewer, and stop condition	separate formal claim, pedagogical analogy, implementation assumption, evaluation evidence, and governance duty before reuse	reject claims that the free-energy principle proves autonomous agency, intent, detection performance, or oversight-free action
Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	separate raw reporting, inference, judgment, and recommendation before synthesis	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Operator-Workload Hygiene Lens	operator workload card with queue state, NASA-TLX ratings, focus plan, handoff owner, and rest boundary	separate urgency from authority, workload from quality, and personal tempo claims from measured task-switching cost	exclude live operational tempo mandates, surveillance of people, performance coercion, and unreviewed tasking under fatigue
Historical Case-Translation Lens	historical case card with provenance, redaction caveats, timeline, lesson, and evidence-bounded boundary	distinguish what the record shows, what remains redacted or unknown, and which governance lesson is defensibly transferable	exclude reconstruction of current sources, methods, tactics, cover, or collection workflows from historical material
Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	verify official list source, typology provenance, beneficial-ownership uncertainty, export-control relevance, and non-evasion framing	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Agentic Tool-Governance Lens	agent run card with tool allowlist, identity, logs, autonomy limit, approval gates, and recovery path	verify least privilege, prompt-injection exposure, provenance, observability, stop conditions, and incident-reporting triggers	block excessive agency, shadow tools, credential leakage, autonomous deployment, and irreversible actions
Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	verify that taxonomy labels are descriptive, indicators are contextualized, incident categories are reviewable, and outputs remain detection or assurance oriented	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Software-Supply-Chain Assurance Lens	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps	separate provenance evidence, social-trust signals, build controls, vulnerability claims, and attribution uncertainty	exclude exploit reproduction, maintainer targeting, backdoor mechanics, credential hunting, and live repository interference
Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	distinguish observation, attribution, impact assessment, and resilience response	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cyber-Physical Readiness Lens	tabletop packet with OT asset inventory, architecture record, consequences, injects, and debrief rubric	validate against safety, availability, engineering state, incident scope, and after-action learning	keep exercises lab-only or tabletop; exclude exploitation, process manipulation, unsafe actuation, and live-control actions
Oversight-and-Rights Lens	authority-and-impact register with approvals, limits, public notice, audit owners, and review dates	confirm lawful purpose, proportionality, retention, review, and appeal or redress paths	reject authority laundering, privacy overreach, unmanaged retention, and governance-as-afterthought

2.11 Research anchor atlas: curated sources, lanes, tiers, and claim scope

The full curated-source table appears once in Section 80.8. Use those rows to find each anchor's identity, lane, tier, and bounded support role; use Section 80.3 for checked dates, refresh cadence, and due-status evidence. Section 2.12 provides the shorter lane-level view. Presence in the atlas is navigation metadata, not proof that a source supports a particular claim.

2.12 Source lane map: provenance lanes, support strength, and refresh context

Source lane	Anchor count	Refresh cadence	Claim scope
accessibility_digital_inclusion	4	annual, quarterly, semiannual	4 scoped claim families
active_measures_attribution	1	annual	Supports bounded AGEINT discussion of active_measures_attribution and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
active_measures_disinformation	1	annual	Supports bounded AGEINT discussion of active_measures_disinformation and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
active_measures_information_operations	1	annual	Supports bounded AGEINT discussion of active_measures_information_operations and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
adversarial_ai_security	1	semiannual	Supports bounded AGEINT discussion of adversarial_ai_security and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
agent_foundations	2	semiannual	Supports bounded AGEINT discussion of agent_foundations and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
agent_incident_response	7	annual, quarterly, semiannual	7 scoped claim families
agent_interoperability_standards	12	annual, quarterly, semiannual	12 scoped claim families
agentic_ai_governance	21	annual	8 scoped claim families
agentic_ai_security	2	annual, semiannual	2 scoped claim families
agentic_ai_security_governance	1	quarterly	agentic AI adoption and security-governance context, not an AGEINT benchmark
agentic_analytic_assistance	1	annual	Supports bounded claims that AI-enabled reasoning systems can assist evidence discovery and reasoning review while retaining analyst responsibility.
agentic_design_principles	1	semiannual	Supports bounded AGEINT discussion of agentic_design_principles and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.

Source lane	Anchor count	Refresh cadence	Claim scope
agentic_framework_docs	3	semiannual	Supports bounded AGEINT discussion of agentic_framework_docs and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
agentic_memory	1	semiannual	Supports bounded AGEINT discussion of agentic_memory and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
agentic_reasoning	1	semiannual	Supports bounded AGEINT discussion of agentic_reasoning and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
ai_conformity_compliance	7	annual, quarterly, semiannual	7 scoped claim families
ai_enabled_analysis_boundary	9	annual, semiannual	9 scoped claim families
ai_ethics_data_governance	10	annual	curriculum grounding and source-backed synthesis
ai_red_team_assurance	14	annual, quarterly, semiannual	14 scoped claim families
algorithmic_transparency_reporting	2	quarterly	2 scoped claim families
analytic_cognition_and_bias	6	annual	6 scoped claim families
analytic_epistemology	1	annual	epistemic-framing support for calibrated claims and reviewer challengeability
analytic_method_design	3	annual	3 scoped claim families
analytic_method_pedagogy	9	annual	9 scoped claim families
analytic_outreach_governance	1	annual	analytic-outreach governance support for expert engagement and risk controls
analytic_product_dissemination	1	annual	analytic-product utility, discoverability, and dissemination-governance support
analytic_production_workflow	1	annual	workflow and analytic-production support for iterative, reviewable tradecraft artifacts
analytic_tradecraft	7	annual	2 scoped claim families
analytic_tradecraft_evidence	5	annual	5 scoped claim families
analytic_tradecraft_forecasting	2	annual	Supports bounded AGEINT discussion of analytic_tradecraft_forecasting and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
analytic_uncertainty_language	4	annual	4 scoped claim families
apt_threat_intelligence	3	semiannual	Supports bounded AGEINT discussion of apt_threat_intelligence and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
assurance_evaluation_evidence	8	annual, quarterly, semiannual	8 scoped claim families
classification_marking_governance	1	annual	classification-marking context for caveat and dissemination-boundary lessons
cognitive_active_inference	9	annual	9 scoped claim families

Source lane	Anchor count	Refresh cadence	Claim scope
cognitive_bias_foundations	2	annual	Supports bounded AGEINT discussion of cognitive_bias_foundations and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
cognitive_influence_security	13	annual	10 scoped claim families
cognitive_performance	4	annual	Supports bounded AGEINT discussion of cognitive_performance and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
cognitive_resilience_evidence	1	annual	Peer-reviewed Science Advances study testing psychological inoculation videos for improving misinformation resilience at scale, with bounded transfer from measured outcomes to curriculum claims
cognitive_security_inoculation	2	annual	Supports bounded AGEINT discussion of cognitive_security_inoculation and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
cognitive_security_misinformation	1	annual	Supports bounded AGEINT discussion of cognitive_security_misinformation and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
collection_management	2	annual	curriculum grounding and source-backed synthesis
collection_management_doctrine	1	annual	Supports bounded AGEINT discussion of collection_management_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
counterintelligence_program_governance	2	annual, quarterly	2 scoped claim families
counterintelligence_source_integrity	7	annual	6 scoped claim families
counterintelligence_strategy	2	annual	Supports bounded AGEINT discussion of counterintelligence_strategy and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
cross_border_data_spaces	4	semiannual	4 scoped claim families

Source lane	Anchor count	Refresh cadence	Claim scope
cryptographic_standards	1	semiannual	Supports bounded AGEINT discussion of cryptographic_standards and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
cryptography_standards	3	semiannual	Supports bounded AGEINT discussion of cryptography_standards and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
current_threat_baseline	1	annual	public threat-context grounding and warning-topic baseline, not operational targeting or AGEINT benchmark evidence
cyber_defense_guidance_index	1	quarterly	defensive cyber guidance index support for source routing and refresh duties
cyber_threat_intelligence	17	annual, semiannual	9 scoped claim families
dataset_documentation	2	annual	2 scoped claim families
declassified_analytic_history	2	annual	2 scoped claim families
declassified_reconnaissance_history	1	annual	declassified reconnaissance history support for historical and GEOINT source-provenance lessons
defense_osint_governance	1	annual	public OSINT governance and professionalization support, not collection procedure or live targeting guidance
disinformation_cognitive_psychology	1	annual	Supports bounded AGEINT discussion of disinformation_cognitive_psychology and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
disinformation_misinformation_science	1	annual	Supports bounded AGEINT discussion of disinformation_misinformation_science and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
economic_security_review	1	annual	economic-security and due-diligence governance support for threat-analysis framing
education_assessment	6	annual, semiannual	6 scoped claim families
ethics_of_intelligence	3	annual	Supports bounded AGEINT discussion of ethics_of_intelligence and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
financial_economic_security	8	annual	curriculum grounding and source-backed synthesis

Source lane	Anchor count	Refresh cadence	Claim scope
finint_aml_cft_international	2	annual	Supports bounded AGEINT discussion of finint_aml_cft_international and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
finint_international_cooperation	1	annual	Supports bounded AGEINT discussion of finint_international_cooperation and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
finint_sar_reporting	1	annual	Supports bounded AGEINT discussion of finint_sar_reporting and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
forecasting_calibration_evidence	6	annual	6 scoped claim families
foreign_disclosure_governance	1	annual	foreign-disclosure governance support for release-boundary and control-marking lessons
geoint_data_governance	1	annual	GEOINT data-governance and digital-transformation context for modular source substrate claims
geoint_doctrine	2	annual	Supports bounded AGEINT discussion of geoint_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
geoint_professional_doctrine	1	annual	GEOINT doctrine and geospatial-intelligence framing support
geoint_tradecraft	1	annual	Supports bounded AGEINT discussion of geoint_tradecraft and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
governed_intelligence_cycle	2	annual	curriculum grounding and source-backed synthesis
gray_zone_competition_doctrine	1	annual	Supports bounded AGEINT discussion of gray_zone_competition_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
historical_declassified_sources	4	annual	curriculum grounding and source-backed synthesis

Source lane	Anchor count	Refresh cadence	Claim scope
historical_ics_incidents	4	semiannual	Supports bounded AGEINT discussion of historical_ics_incidents and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
human_rights_governance	6	annual, semiannual	6 scoped claim families
humint_doctrine	4	annual	Supports bounded AGEINT discussion of humint_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
humint_oversight_history	1	annual	Supports bounded AGEINT discussion of humint_oversight_history and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
hybrid_warfare_doctrine	1	annual	Supports bounded AGEINT discussion of hybrid_warfare_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
hybrid_warfare_stratcom	1	annual	Supports bounded AGEINT discussion of hybrid_warfare_stratcom and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
ic_information_environment_risk	2	annual	2 scoped claim families
ic_public_transparency	7	quarterly	7 scoped claim families
ics_ot_defense	10	annual	curriculum grounding and source-backed synthesis
ics_ot_security_standards	3	semiannual	Supports bounded AGEINT discussion of ics_ot_security_standards and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
imint_joint_intelligence_doctrine	1	annual	Supports bounded AGEINT discussion of imint_joint_intelligence_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.

Source lane	Anchor count	Refresh cadence	Claim scope
information_operations_doctrine	1	annual	Supports bounded AGEINT discussion of information_operations_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
integrated_mission_management	1	annual	mission-management governance support for requirements-to-evidence substrate design
intelligence_diplomacy_governance	1	annual	governance context for intelligence diplomacy and partner-engagement boundaries
intelligence_failure_postmortem	9	annual, biennial	9 scoped claim families
intelligence_history_american	1	annual	Supports bounded AGEINT discussion of intelligence_history_american and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
intelligence_history_british_allied	1	annual	Supports bounded AGEINT discussion of intelligence_history_british_allied and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
intelligence_history_soviet	2	annual	Supports bounded AGEINT discussion of intelligence_history_soviet and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
intelligence_profession_literature	4	annual	4 scoped claim families
intelligence_writing_and_review	3	annual	3 scoped claim families
irregular_warfare_strategy	1	annual	Supports bounded AGEINT discussion of irregular_warfare_strategy and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
learner_support_accommodations	1	semiannual	learner support plans, accessibility exception documentation, alternative means, and artifact remediation
legal_authorities_intelligence_collection	1	annual	Supports bounded AGEINT discussion of legal_authorities_intelligence_collection and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.

Source lane	Anchor count	Refresh cadence	Claim scope
legal_authorities_surveillance	3	annual	Supports bounded AGEINT discussion of legal_authorities_surveillance and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
legal_oversight	9	annual	2 scoped claim families
legal_oversight_intelligence	1	annual	Supports bounded AGEINT discussion of legal_oversight_intelligence and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
llm_architecture	1	semiannual	Supports bounded AGEINT discussion of llm_architecture and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
llm_evaluation	2	semiannual	Supports bounded AGEINT discussion of llm_evaluation and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
model_card_reporting	1	annual	model documentation cards, intended-use statements, evaluation caveats, and release notes
model_data_provenance	14	annual, quarterly, semiannual	14 scoped claim families
multi_agent_frameworks	1	semiannual	Supports bounded AGEINT discussion of multi_agent_frameworks and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
national_intelligence_governance	1	annual	IC governance and national-intelligence production context
non_state_engagement_governance	1	annual	non-state engagement governance support for source, outreach, and no-tasking boundaries
opsec_doctrine_governance	1	biennial	Provides official historical OPSEC policy context for critical-information protection and public doctrine framing; not an operational OPSEC playbook.
osint_doctrine	3	annual	Supports bounded AGEINT discussion of osint_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
osint_geoint	6	annual	2 scoped claim families

Source lane	Anchor count	Refresh cadence	Claim scope
osint_methodology	1	annual	Supports bounded AGEINT discussion of osint_methodology and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
privacy_ip_governance	3	annual	curriculum grounding and source-backed synthesis
procurement_performance_monitoring	1	quarterly	AI procurement monitoring, vendor demonstrations, acquisition criteria, QASP evidence, and performance review
procurement_vendor_governance	4	annual, quarterly, semiannual	4 scoped claim families
psyop_miso_doctrine	1	annual	Supports bounded AGEINT discussion of psyop_miso_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
public_sector_agentic_ai	5	quarterly, semiannual	5 scoped claim families
public_sector_transparency	3	annual, quarterly, semiannual	3 scoped claim families
records_retention_auditability	5	annual, quarterly, semiannual	5 scoped claim families
rights_impact_privacy	4	annual, quarterly, semiannual	4 scoped claim families
risk_exception_governance	1	quarterly	risk exception governance, AI maturity plans, data traceability, public trust, and oversight capacity
sat_evaluation_evidence	13	annual	13 scoped claim families
secure_release_change_control	9	annual, quarterly, semiannual	9 scoped claim families
sigint_emanations_intelligence	1	annual	Supports bounded AGEINT discussion of sigint_emanations_intelligence and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
sigint_history	1	annual	Supports bounded AGEINT discussion of sigint_history and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
sigint_oversight_history	1	annual	Supports bounded AGEINT discussion of sigint_oversight_history and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
social_engineering_influence_psychology	1	annual	Supports bounded AGEINT discussion of social_engineering_influence_psychology and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.

Source lane	Anchor count	Refresh cadence	Claim scope
source_construction_reporting	1	annual	PRISMA-S reporting guideline for documenting literature searches, search strategies, information sources, limits, records, and reproducibility details
special_operations_doctrine	1	annual	Supports bounded AGEINT discussion of special_operations_doctrine and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
supply_chain_intelligence_attacks	3	semiannual	Supports bounded AGEINT discussion of supply_chain_intelligence_attacks and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
supply_chain_risk_governance	1	annual	supply-chain risk governance support for defensive procurement and assurance lessons
synthetic_media_provenance	4	annual, semiannual	4 scoped claim families
tearlines_and_release_governance	1	annual	tearline and release-governance support for public-facing evidence boundaries
threat_intel_sharing_standards	1	semiannual	Supports bounded AGEINT discussion of threat_intel_sharing_standards and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
tool_use_agents	2	semiannual	Supports bounded AGEINT discussion of tool_use_agents and related source evidence. It does not authorize collection tasking, exploit steps, covert-action guidance, manipulation playbooks, unsafe cyber-physical actions, or live-target procedures.
warning_intelligence	3	annual	3 scoped claim families
workforce_governance	5	annual, quarterly, semiannual	5 scoped claim families

2.13 Safe substitution matrix: defensive artifacts for risky inherited motifs

Source motif	Unsafe source motif	Safe curriculum substitute	Blocked context
AGEINT patterns	raw source motifs can imply autonomous tasking, monitoring, response, or deception	identity-preserving pattern registry plus tabletop, audit, provenance, and governance exercises	deployment, live target tasking, or external action
OSINT tools	broad scraping, exposed-service lookup, credentialed search, or identity exposure	tool-governance audit over instructor-provided records, toy inputs, and source-quality cards	live collection expansion or private-data discovery
GEOINT	facility assessment, force assessment, geolocation targeting, or pattern-of-life inference	provided imagery metadata quality audit with synthetic change examples and uncertainty notes	live facility assessment or tracking
SOC and CTI	autonomous response, exploitability claims, indicator publishing, or production-system action	fabricated-alert tabletop triage with ATT&CK mapping, severity rationale, and debrief evidence	production containment, exploitation, scanning, or blocking
HUMINT and CI	persona construction, contact handling, elicitation, deception, or source exposure	synthetic identity-and-provenance ethics audit with role-play records and review rubrics	impersonation, covert contact, or operational-security support
Cognitive influence	covert persuasion, microtargeting, audience manipulation, or intervention delivery	opt-in media-literacy lesson plan using synthetic materials and transparent prebunking labels	campaign design or audience-targeted persuasion
ICS and OT	facility monitoring, control action, safety-system interference, or cyber-physical response	owned-lab or synthetic process-safety tabletop with logs, rollback, and human approval gates	real plant operations, live devices, or unsafe control changes

2.14 Capstone workflow: phase sequence, artifacts, and reviewer gates

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

2.15 Capstone model-answer exemplars: strong evidence packets and revision triggers

These exemplars show the expected shape of a strong answer without prescribing a single conclusion. Use them as answer-key patterns for selected capstone reviews.

Capstone pattern	Model-answer evidence	What earns revision
Source-quality packet	Names the `ageintNNN` source key, source lane, direct evidence, caveat, uncertainty, and refresh trigger.	Claim cites a summary, omits the source key, or hides uncertainty.
Safe-lab packet	States the learning question, allowed inputs, excluded actions, tool allowlist, stop condition, and reviewer gate.	Uses private data, live targets, credentialed access, or an unreviewed tool path.
Assurance packet	Connects rubric score, rights impact, accessibility check, remediation owner, and debrief handoff.	Treats the score as proof, omits affected users, or leaves no owner for retest.

2.16 Accessibility and UDL review: learner access, modality checks, and accommodation evidence

Step	Artifact	Review question
Access baseline	WCAG/UDL needs note	Can every learner perceive, operate, understand, and complete the artifact without a hidden access barrier?
Learner variability	multiple-means design note	Are engagement, representation, and action or expression options available before remediation is requested?
Assistive technology	screen-reader, keyboard, contrast, caption, and plain-language check	Can the artifact be reviewed with common assistive workflows and documented alternatives?
Public-service duty	Title II or institutional-accessibility obligation note	If a public or institutional audience uses this artifact, are contractor and service-access duties visible?
Remediation evidence	defect log, owner, due date, and retest result	Are accessibility defects tracked to closure before the artifact is reused?

2.17 Procurement and vendor oversight: tool governance, revocation, and vendor evidence

Step	Artifact	Review question
Need and authority	procurement rationale and legal authority card	Is the vendor capability tied to a valid learning, governance, or defensive need?
Market and vendor transparency	vendor disclosure, subcontractor, data-use, and conflict-of-interest register	Can reviewers see who provides the tool, what data it touches, and which dependencies matter?
Evaluation criteria	weighted criteria for accessibility, privacy, security, provenance, and reversibility	Are evaluation criteria explicit before tool selection rather than rationalized afterward?
Contract controls	logging, deletion, audit, incident, accessibility, and termination clauses	Can the institution pause, audit, remediate, or exit the vendor relationship?
Lifecycle monitoring	renewal evidence, performance review, incident record, and refresh trigger	Does oversight continue after award and before classroom reuse?

2.18 HRIA and DPIA worksheet: rights impact, privacy review, and residual risk

Dimension	Prompt	Evidence
Purpose and authority	What public, educational, or defensive purpose justifies the processing or analysis?	scope card, excluded-action list, and decision owner
Data subjects and affected groups	Who could be affected directly, indirectly, or through downstream reuse?	stakeholder map, vulnerability note, and accessibility considerations
High-risk processing trigger	Does the activity involve sensitive data, profiling, automated evaluation, large-scale processing, or systematic monitoring?	DPIA trigger checklist and mitigation owner
Rights and safeguards	How are privacy, equality, expression, access, contestability, and redress protected?	rights-impact note, safeguard register, and escalation path
Residual risk and refresh	What remains uncertain, who accepts it, and what source or incident would reopen review?	residual-risk decision, review date, and source-refresh trigger

2.19 Data lineage registry: source identity, transformations, retention, and review

Object	Lineage field	Quality gate
Source citation	`ageintNNN`, title, URL, checked date, and source identity status	citation key resolves and reference identity is locked or append-only
Verified anchor	lane, tier, verification method, claim scope, stakeholder role, and assurance use	direct official, standards, public-domain, or scholarly URL was reviewed
Dataset or scenario	origin, license, sensitivity class, transformations, and retention rule	public, synthetic, owned-lab, or instructor-provided data only
Agent transcript	prompt, model context, tool allowlist, budget, reviewer, and blocked actions	no external action, live target, private data, or unsafe cyber-physical step
Final artifact	claim ledger, uncertainty note, accessibility status, rights review, and refresh owner	another reviewer can reproduce and challenge the artifact

2.20 Assessment integrity protocol: declared agent use, grading evidence, and human judgment

Control	Student evidence	Instructor check
Accountable AI use	tool-use declaration and prompt/output appendix	AI assistance is allowed, visible, bounded, and aligned with the assignment
Independent reasoning	assumptions, alternatives, uncertainty, and confidence statement	student judgment is separable from agent-generated drafting
Citation integrity	source spine, verified anchors, and claim ledger	claims are not source-laundered through agent prose
Synthetic lab boundary	allowed-inputs card, excluded actions, and stop conditions	activity remains public, benign, owned-lab, synthetic, defensive, and reversible
Feedback and revision	rubric self-score, reviewer notes, and remediation log	revision evidence addresses the actual deficiency before reuse

2.21 Agent incident response drill: pause, revoke, preserve, recover, and debrief

Phase	Drill action	Artifact
Prepare	define agent scope, tool permissions, logs, escalation roles, and stop conditions	incident play card and contact matrix
Detect	identify anomalous output, policy drift, source-laundering, data exposure, or unsafe tool request	synthetic incident ticket and evidence snapshot
Contain	pause the workflow, revoke tool access, preserve records, and route to human review	containment decision and access-change log
Recover	restore a known-safe prompt, dataset, tool profile, or rubric state	rollback note and retest result
Debrief	record root cause, learner impact, rights impact, vendor implication, and refresh trigger	post-incident memo and owner assignment

2.22 Role-based competency map: responsibilities, evidence owners, and assurance roles

Role	Competency	Evidence
Learner analyst	separate claim, evidence, uncertainty, confidence, and source quality	claim ledger and reflective memo
Instructor	facilitate safe labs, assess integrity, and preserve accessibility	rubric, UDL review, and debrief notes
Source steward	lock source identities, verify new anchors, and maintain refresh triggers	Section 2.12 and Section 80.3
Assurance reviewer	test failure modes, adversarial assumptions, tool boundaries, and incident response	red-team review, incident drill, and remediation record
Rights and procurement reviewer	evaluate privacy, accessibility, vendor, public transparency, and human-rights impacts	HRIA/DPIA worksheet and procurement oversight packet

2.23 Adversarial assurance cycle: challenge rows, remediation owners, and retest evidence

Stage	Challenge question	Artifact
Misuse case	How could the module be misread as operational, unfair, inaccessible, or overconfident?	misuse-case card and safe-substitution decision
Control challenge	Which authority, data, tool, rights, or review control would fail first?	control challenge matrix
Evidence attack	Can a claim survive source verification, provenance review, and counter-evidence?	challenged claim ledger
Incident rehearsal	What happens if an agent drifts, leaks context, fabricates support, or requests unsafe action?	synthetic incident drill and recovery note
Remediation	Which wording, workflow, source, figure, or assessment gate must change before reuse?	owner, due date, retest result, and refresh trigger

2.24 Model and dataset documentation card: intended use, provenance, caveats, and lifecycle

Field	Model card evidence	Dataset card evidence	Review gate
Intended use	accountable task, excluded uses, affected users, human reviewer, and accountable owner	Data Cards purpose statement, recommended use, prohibited reuse, stewardship owner, and affected stakeholder groups	claim is rejected if intended use, excluded use, affected users, or owner is missing
Provenance and collection	model family, version, supplier or lab, training cutoff, deployment context, and configuration hash	upstream source, collection process, annotation method, consent or authority basis, sensitivity class, and license	artifact is held if provenance, license, authority, or collection process is opaque
Composition and limits	capability boundary, known failure modes, tool permissions, context window limits, and unsupported conditions	population, sampling frame, coverage gaps, subgroup visibility, missingness, transformations, and known caveats	artifact is revised if population, coverage, or source limits are invisible
Evaluation and caveats	benchmark suite, task-specific tests, subgroup or context results, red-team findings, uncertainty notes, and failure examples	quality tests, label agreement, bias review, measurement limits, transformation log, and Data Cards answer-evaluation notes	empirical or performance claims are rejected unless test context, subgroup caveats, and uncertainty are visible
Lifecycle controls	release gate, rollback path, monitoring signal, incident threshold, refresh trigger, and model-card update owner	retention rule, access boundary, update cadence, deletion path, stewardship handoff, and dataset-card revision trigger	reuse is blocked without owner, retention, monitoring, rollback, and refresh evidence

2.25 Transparency and communication notice: purpose, safeguards, human review, and limits

Step	Artifact	Review gate
Public purpose	plain-language purpose, authority, affected service, and decision role	reader can tell why the system exists and where human judgment remains
Tool and data summary	model, data, supplier, provenance, validation, and accessibility summary	sensitive details are de-sensitized without hiding accountability fields
Impact and review	benefits, risks, safeguards, human review, appeal, and contact point	affected groups can identify recourse and oversight owners
Publication decision	publish, partially publish, delay, or hold decision with exemption rationale	non-public fields have a documented legal, security, privacy, or IP basis

2.26 Records retention and audit trail: owners, retention rules, and deletion conditions

Record	Retained fields	Audit requirement
Source and prompt register	source identity, prompt version, tool allowlist, reviewer, timestamp, and caveat	Can a later reviewer reconstruct the evidentiary path without private or live data?
Decision and exception log	risk owner, accepted exception, compensating control, expiry date, and approval	Is every deviation time-bound, justified, and reviewable?
Artifact retention note	output type, sensitivity, access boundary, deletion rule, and refresh trigger	Does the retention choice match the educational purpose and rights impact?
Incident and remediation record	incident signal, containment action, root cause, owner, retest result, and closure date	Can the same failure be detected and prevented in the next reuse cycle?

2.27 Release and change-control gate: reuse approval, rollback, and change evidence

Gate	Release evidence	Block condition
Scope freeze	accountable use case, excluded actions, tool profile, and data boundary	scope expands to external action, live data, or an unreviewed capability
Security and rights review	privacy, accessibility, security, bias, and human-review checks	rights impact, vulnerability, or accessibility issue has no owner
Version and rollback	model or prompt version, changelog, test fixture, and rollback path	change cannot be reproduced, compared, or reverted
Post-release monitoring	monitoring signal, incident threshold, refresh trigger, and owner	deployment or reuse occurs without logging and retest commitments

2.28 Risk exception and acceptance memo: residual risk, owner approval, and review clock

Field	Minimum content	Approval rule
Exception requested	what requirement cannot be met, why, affected groups, and duration	exception must be specific, time-bound, and tied to a compensating control
Risk basis	likelihood, impact, evidence, uncertainty, alternatives, and rejected options	unsupported confidence or missing alternatives returns the memo for revision
Compensating control	human review, monitoring, access limit, disclosure, remediation, and owner	control must reduce risk without creating an operational workaround
Expiry and retest	expiry date, retest condition, review cadence, and closure criteria	open-ended exceptions are rejected

2.29 Learner support and accommodation plan: support rows, access barriers, and escalation

Need	Support	Evidence
Access and modality	captions, alt text, keyboard path, plain-language summary, and structured tables	accessibility checklist, defect log, and retest result
Cognitive load	worked examples, staged release, glossary, checklist, and optional practice fixture	UDL design note and learner feedback record
Assessment fairness	allowed-tool statement, AI-use declaration, alternative submission mode, and transparent rubric	assessment-integrity note and accommodation record
Feedback and remediation	revision path, office-hour prompt, example correction, and due-date flexibility policy	feedback log and instructor disposition

2.30 Instructor question bank: prompts, evidence checks, and misconception probes

Question type	Prompt	Evidence
Source challenge	Which claim would fail if the strongest source were removed or downgraded?	claim ledger revision and source-lane note
Boundary challenge	Where could this exercise drift from analysis into action, and what safe substitute prevents it?	safe-substitution decision and excluded-action card
Rights challenge	Which affected group, accessibility need, privacy interest, or redress path is under-specified?	HRIA/DPIA update and accommodation note
Assurance challenge	What failure would the current evaluation miss, and what retest would reveal it?	adversarial assurance retest and remediation owner

2.31 Remediation backlog: issue owners, retest evidence, and closure boundaries

Backlog item	Trigger	Closure evidence
Unverified claim	claim lacks a guide citation or directly verified anchor	verified source, removed claim, or explicit source-guide context note
Unsafe phrasing	wording implies live targeting, external action, exploitation, manipulation, or unsafe control	safe substitute, blocked context, and reviewer sign-off
Accessibility defect	artifact cannot be inspected through an expected assistive or alternative workflow	defect fix, alternative means, and retest result
Assurance gap	evaluation, release, exception, incident, or vendor evidence is incomplete	owner, due date, retest, and accepted disposition

2.32 Scholarship and governance stance: source posture, claim limits, and public-readiness boundary

AGEINT treats agentic intelligence as a governed socio-technical practice, not as a bag of prompts or autonomous tricks. The curriculum therefore keeps AI agent evaluation, identity, authorization, secure tool use, structured analytic tradecraft, cognitive security, OSINT/GEOINT integrity, and ICS/OT safety in one source-backed frame. Each source anchor has a curriculum role, a domain, and a provenance type so readers can distinguish law, standards, official guidance, public-domain historical material, scholarly synthesis, and weaker practitioner or vendor context. Unless a section cites an empirical study or evaluation source for a narrower point, AGEINT language should be read as proposed design guidance and an assurance framework rather than measured performance evidence. Technical and theoretical analogies, including active-inference material, remain bounded by their direct domain sources and do not become deployment evidence without separate evaluation support.

The scholarship audit checks citation presence, source-family mix, and thin claim-bearing sections. Its count thresholds and family warnings are screening rules, not grading criteria or tests of evidentiary independence: two publishers may share one upstream observation, while two genuinely separate studies can belong to one source family. Normative authority and empirical results must be assessed for their distinct claim roles. The control surface is summarized in Figure 17, with a companion report at `output/reports/scholarship_quality.json`. Human review must still trace origins, inspect exact passages, and seek contradictory evidence [Melissa L. Rethlefsen, Shona Kirtley, Siw Waffenschmidt, Ana Patricia Ayala, David Moher, Matthew J. Page, Jonathan B. Koffel, and the PRISMA-S Group, 2021]; [National Institute of Standards and Technology, 2023a]; [National Institute of Standards and Technology, 2024d].

Claim calibration sits beside that scholarship audit. The source-strength layer classifies source-guide rows and curated anchors by whether they can carry a bounded claim directly or only provide context. Weak source-guide context, vendor/practitioner commentary, social/video rows, and mirror/copy rows cannot alone support empirical performance, statistical, governance-authority, safety, or formalism claims. The current report is written to `output/reports/claim_calibration.json` and `.md`, and the unified artifact evidence manifest exposes the result as `claim_calibration_ok`.

Analysis validation adds the reader-facing disposition layer, summarized as a claim-class-to-question matrix in Section 2.7 and Figure 20; that matrix is the boundary on what the manuscript can honestly say. This is why the artifact-evidence manifest records both positive counts and false-certification controls.

2.33 Verifier-first artifact evidence: build freshness, audits, and negative controls

A green validator describes only the properties its checks exercised; negative controls help expose missed failures but do not establish semantic correctness. The artifact-evidence control loop in Figure 16 binds source-owned curriculum inputs, generated manuscript sections, citation inventories, figure metadata, PDF annotations, and current evidence reports into one falsifiable chain. This keeps scholarship, visual assets, and render validation in the same audit surface: a stale PDF, a local Markdown-file link, an uncovered source section, or a figure-registry mismatch must fail the evidence manifest before a maintainer can treat the render as ready. The same stance follows the evaluation and red-team assurance guidance already encoded in the bibliography atlas: adversarial testing is a scoped assurance method, not proof of universal safety or permission to run live operations [Cybersecurity and Infrastructure Security Agency, 2024a]; [National Institute of Standards and Technology, 2025a]; [National Institute of Standards and Technology, 2024e].

2.34 Orientation figures and course links: visual evidence, source flow, and navigation

The orientation uses Figure 5, Figure 6, Figure 7, Figure 8, Figure 9, Figure 10, Figure 11, Figure 12, Figure 13, Figure 14, Figure 15, Figure 16, Figure 17, Figure 18, Figure 19, Figure 20, Figure 21, Figure 22, Figure 23, Figure 24, Figure 25, Figure 26, Figure 27, Figure 28, and Figure 29 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.

Navigation links: Section 1, Section 3.

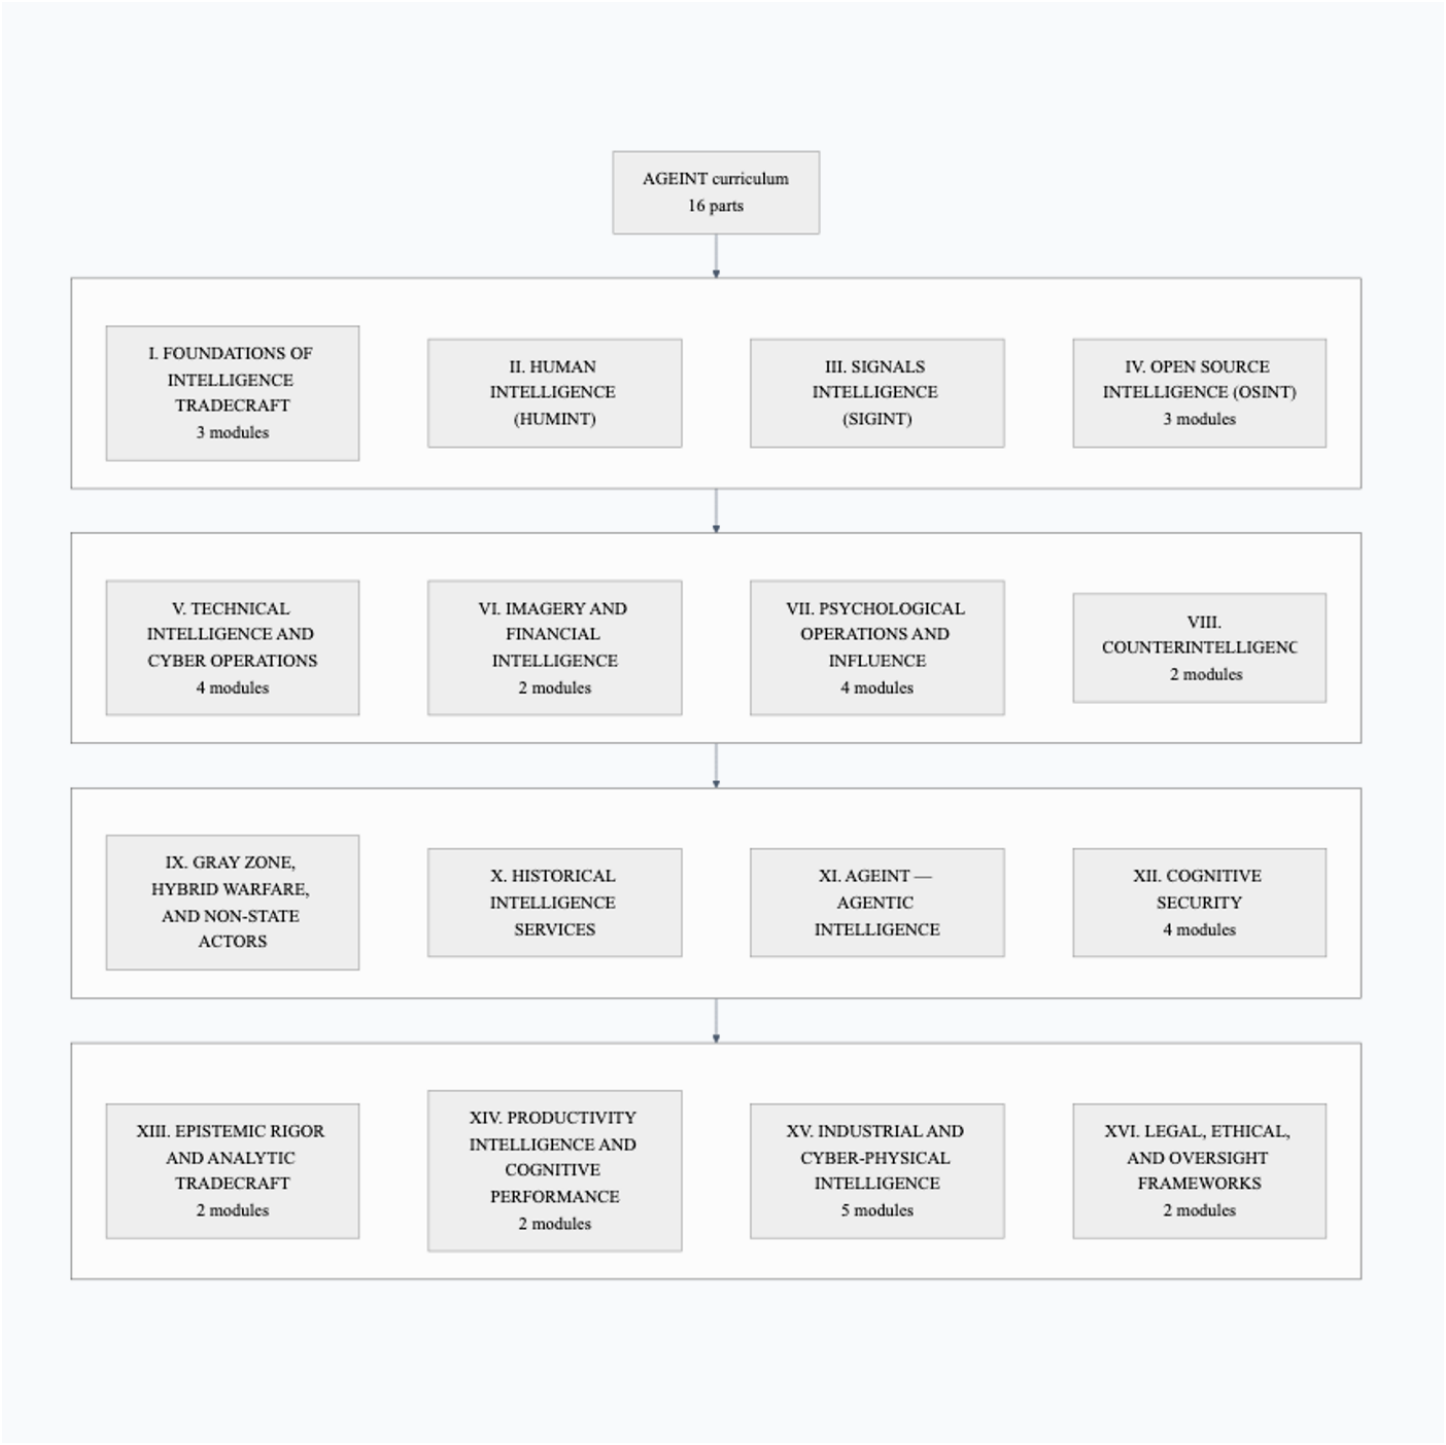

Figure 5: The curriculum map links AGEINT parts into a source-backed learning sequence. The captioned view belongs to the curriculum orientation and should be read as a map of 16 part nodes, source-backed module counts, and the reading path from tradecraft foundations through oversight frameworks, not as a capability score or live-task instruction.

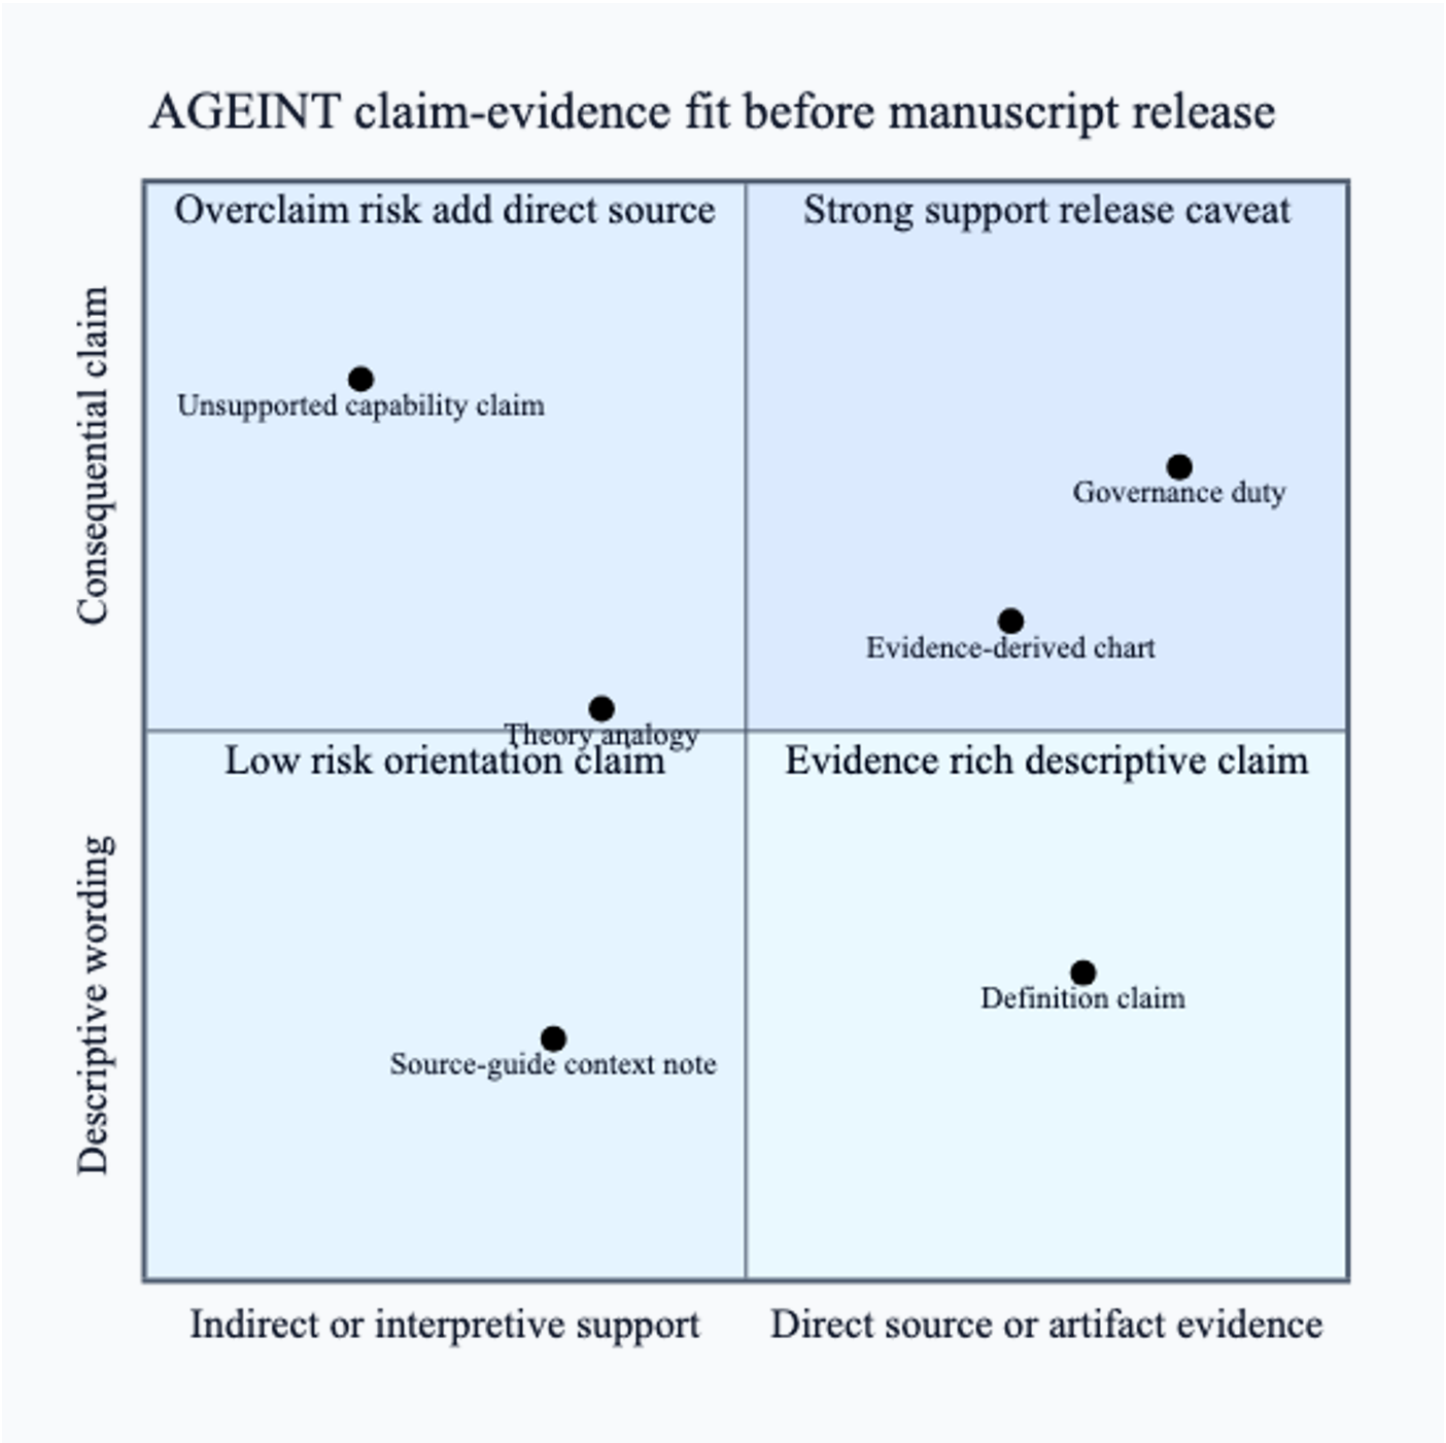

Figure 6: The claim-evidence quadrant helps reviewers distinguish low-risk definitional claims, governance duties, artifact-derived evidence, and high-caveat theory analogies before a manuscript sentence is treated as reviewable. Its reader value is to make x-axis evidence directness from indirect to direct, y-axis claim strength from descriptive to consequential, definition claims fit official or standard sources, and governance duties require policy or law text visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

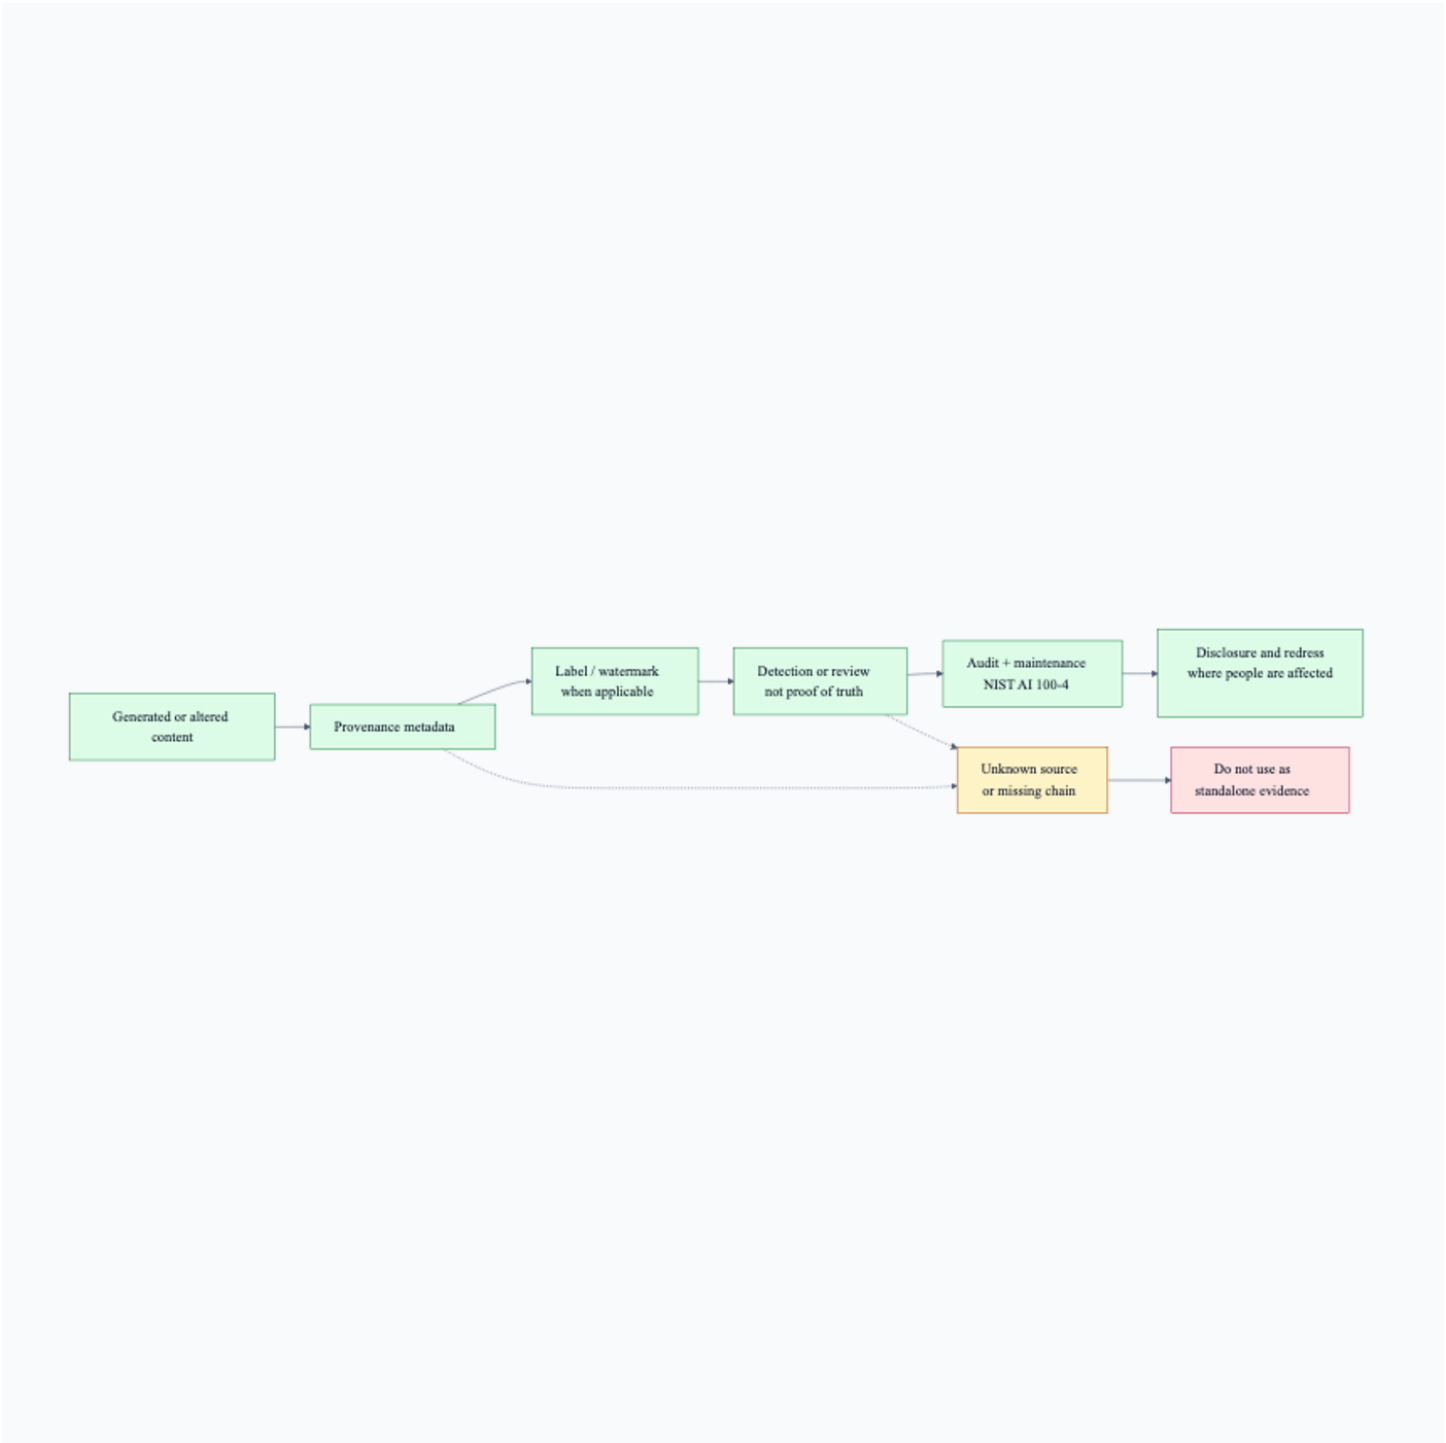

Figure 7: Source-backed conceptual schematic using NIST AI 100-4 to separate provenance, labeling, detection, testing, audit, and redress duties for generated visual and media claims. The captioned view belongs to the curriculum orientation and should be read as a map of Generated or altered content, Provenance metadata, Label / watermark when applicable, and Detection or review not proof of truth, not as a capability score or live-task instruction.

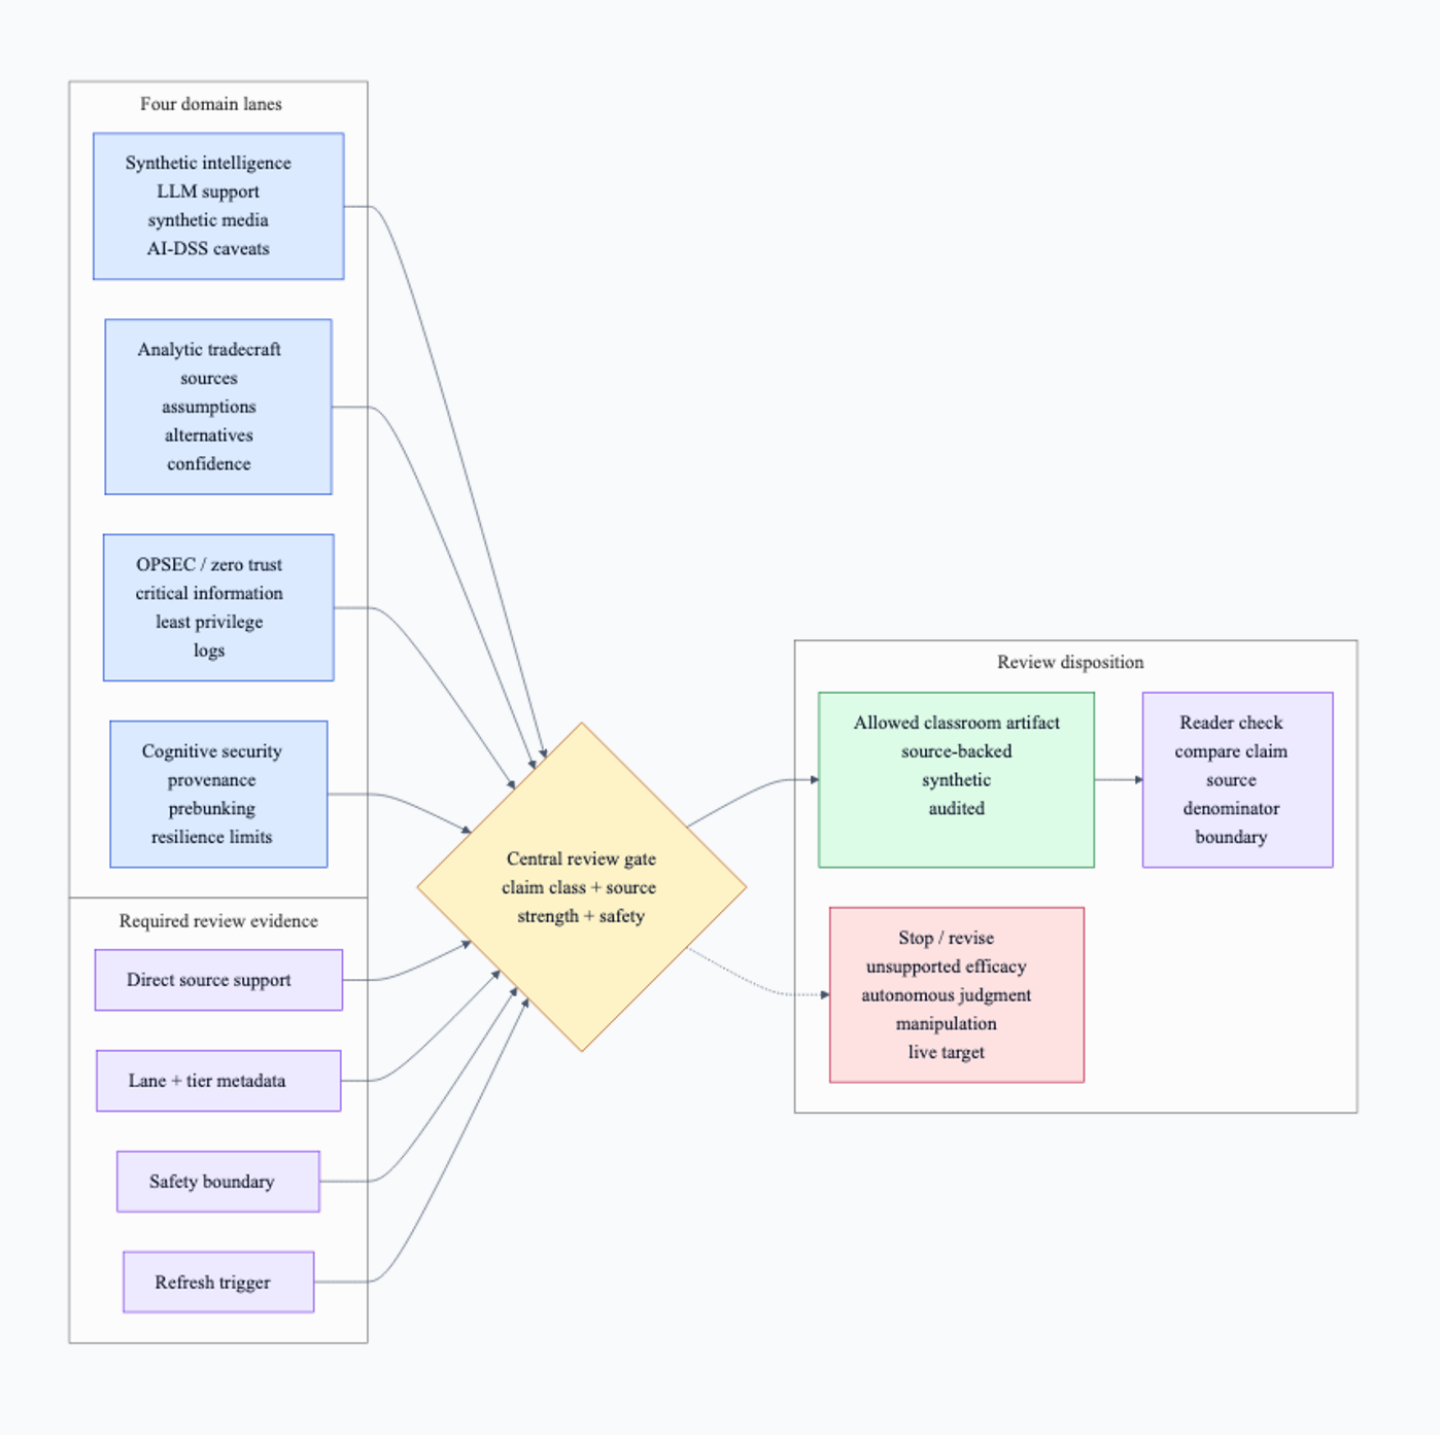

Figure 8: Source-backed architecture map showing four separate review lanes for synthetic intelligence, analytic tradecraft, OPSEC and zero-trust controls, and cognitive-security safeguards. The central gate requires direct source support, metadata, refresh evidence, and safety-boundary evidence before an allowed classroom artifact can be treated as source-backed; unsupported efficacy, autonomous judgment, manipulation, or live-target claims must stop or be revised.

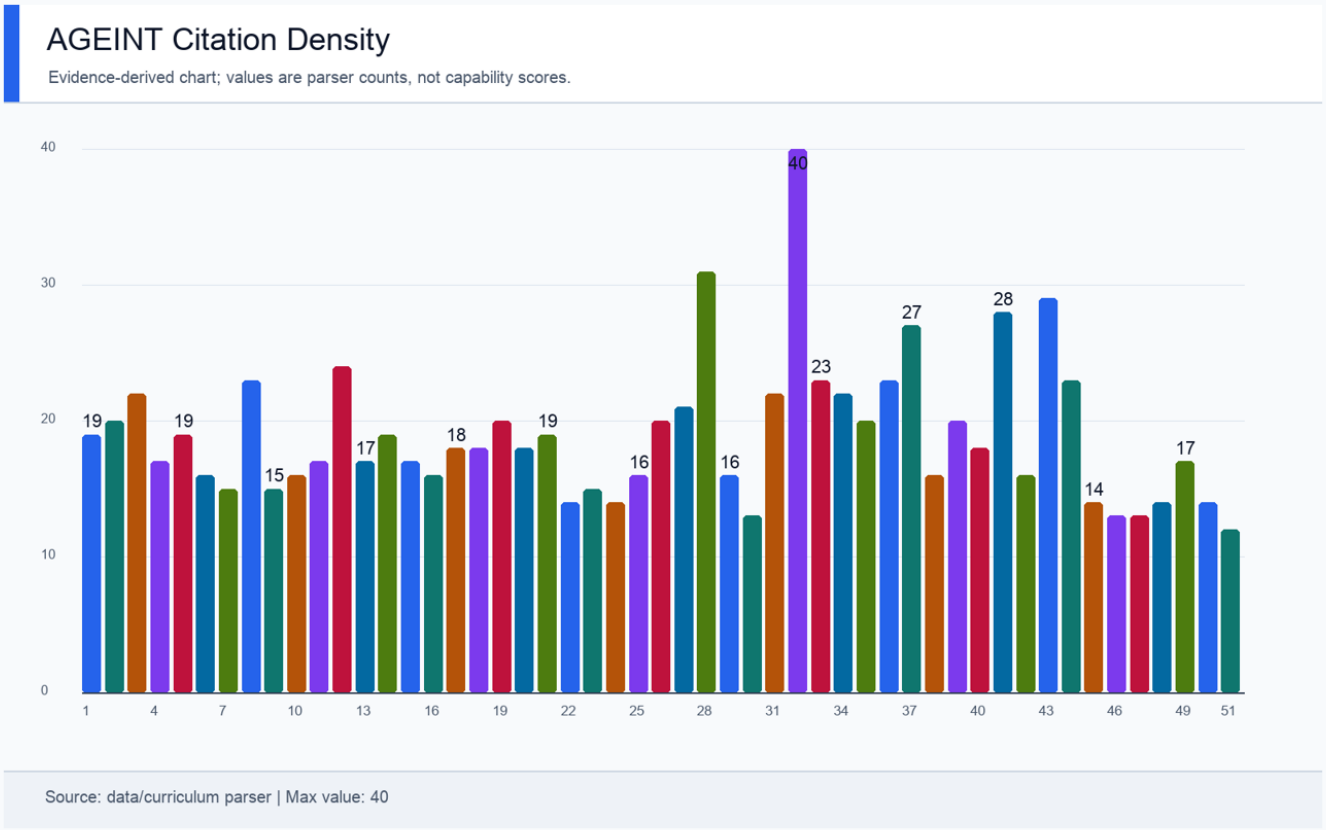

Figure 9: Method-backed audit chart reporting direct external citation counts per generated module; labels, denominators, and counting rule come from the curriculum parser. In the curriculum orientation, it lets readers compare citation density categories, denominators, evidence lanes, limitations, and reviewer-use cautions so the visual functions as a traceable course aid rather than an unscoped assertion.

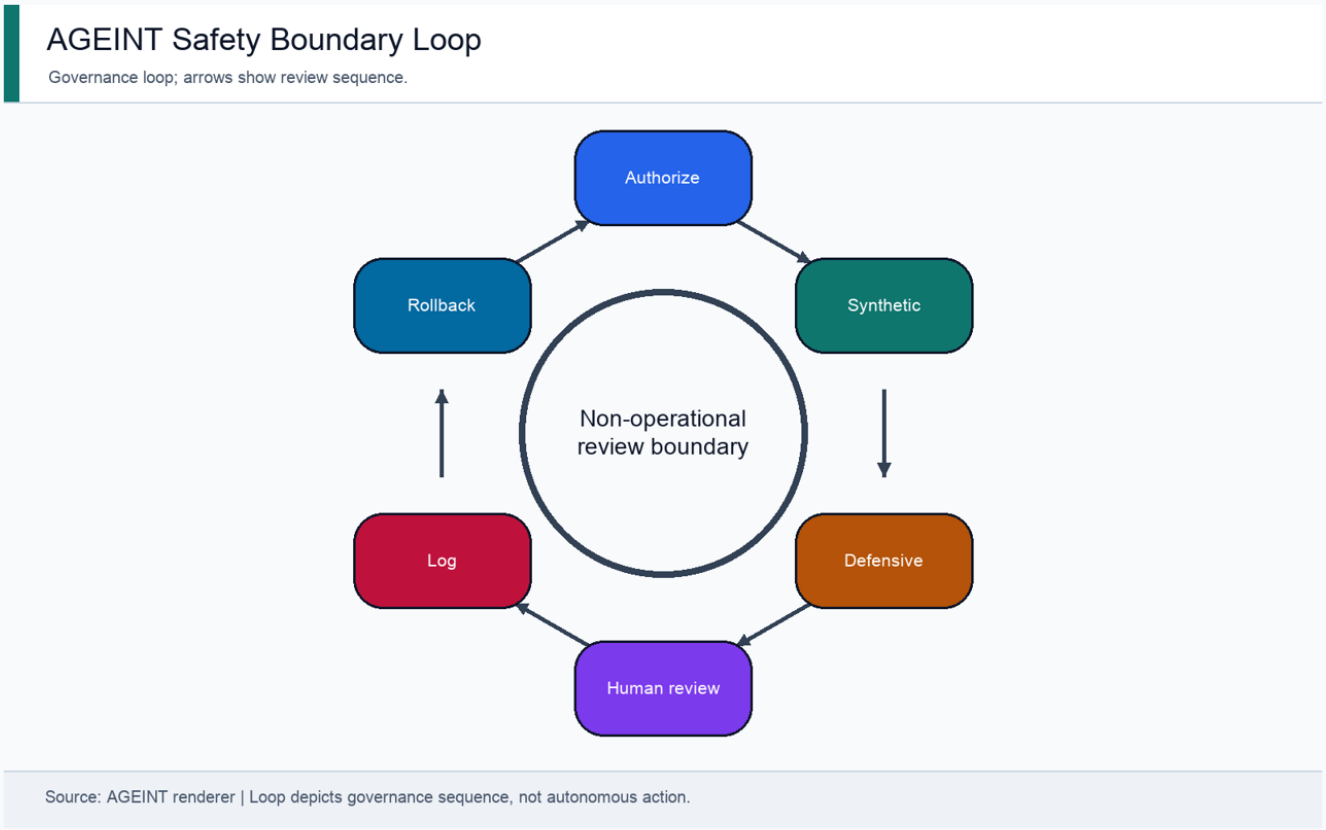

Figure 10: Conceptual governance schematic showing how accountable review, synthetic fixtures, human oversight, logging, and evidence-bounded practice stay connected. In the curriculum orientation, it lets readers compare safety boundary loop steps, decision gates, owner handoffs, refresh triggers, and closure evidence so the visual functions as a traceable course aid rather than an unscoped assertion.

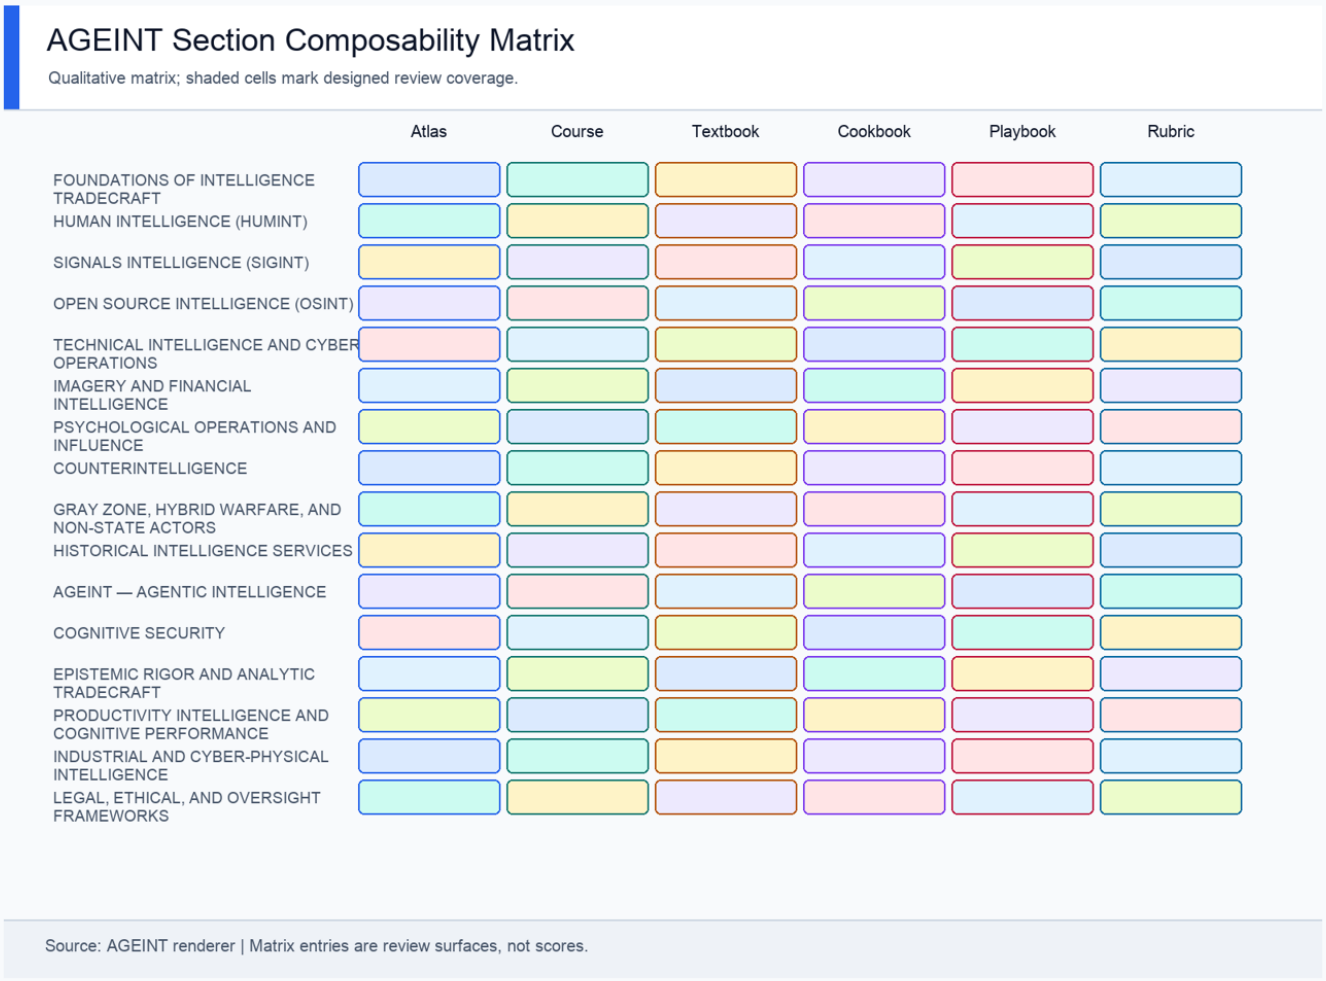

Figure 11: The section composability matrix shows which reusable curriculum artifacts support each part. It is anchored to the curriculum orientation; use it to inspect section composability matrix fields, row and column obligations, source records, reviewer decisions, and closure evidence while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

Figure 12: Conceptual compliance matrix with rows as governance lanes and columns as source, rights, assurance, artifact, and refresh obligations; color groups cells only. Its reader value is to make ai compliance map fields, row and column obligations, source records, reviewer decisions, and closure evidence visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

Figure 13: The accessibility workflow joins WCAG, UDL, remediation, and refresh evidence. In the curriculum orientation, it lets readers compare accessibility workflow steps, decision gates, owner handoffs, refresh triggers, and closure evidence so the visual functions as a traceable course aid rather than an unscoped assertion.

Figure 14: Source-backed accessibility contract mapping W3C WAI complex-image guidance, WCAG 2.2 non-text-content requirements, Section508 alternative-text and PDF checking guidance, and USWDS data-visualization guidance to AGEINT's generated figure registry. It shows how each figure carries a caption, short alt text, long description, source section, provenance, and rendered-artifact validation before PDF or web use.

Figure 15: Machine-checkable dashboard for the generated figure pipeline. It summarizes the quality gates that every AGEINT visual must pass: readable PNG assets, square-normalized layout, informative captions, short alt text, long descriptions, embedded PNG metadata, local provenance, and rendered-output link safety. The companion machine-readable artifact is `../figures/visual_quality_audit.json`.

Figure 16: Source-backed control-loop figure showing how AGEINT binds source-owned inputs, rebuilt manuscript files, citation inventory, figure registry metadata, PDF annotation audits, and current evidence reports so validators cannot certify a stale or partially copied artifact as complete. It is anchored to the curriculum orientation; use it to inspect artifact evidence control loop steps, decision gates, owner handoffs, refresh triggers, and closure evidence while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

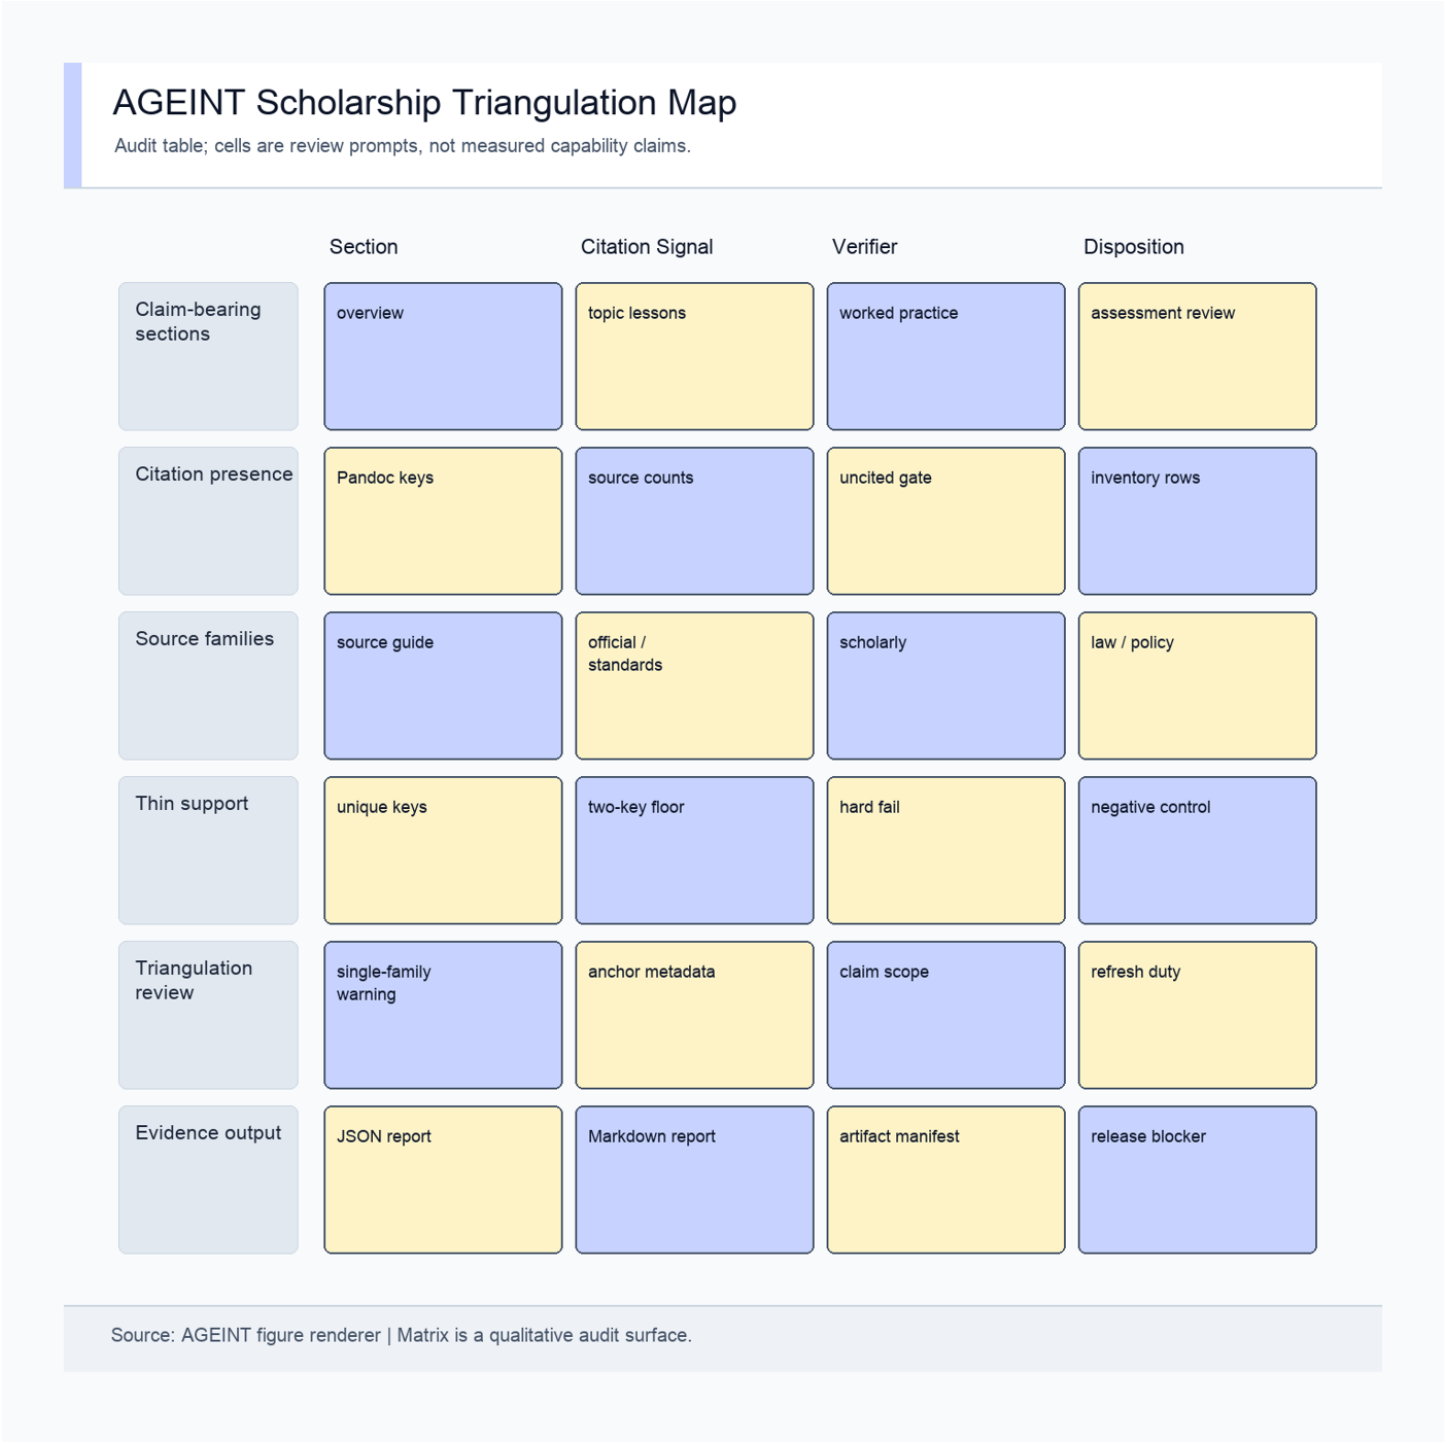

Figure 17: The scholarship triangulation map shows how generated AGEINT sections move from citation presence through source-family classification, thin-support gates, single-family review warnings, and current artifact-evidence reports. Its reader value is to make scholarship triangulation map fields, row and column obligations, source records, reviewer decisions, and closure evidence visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

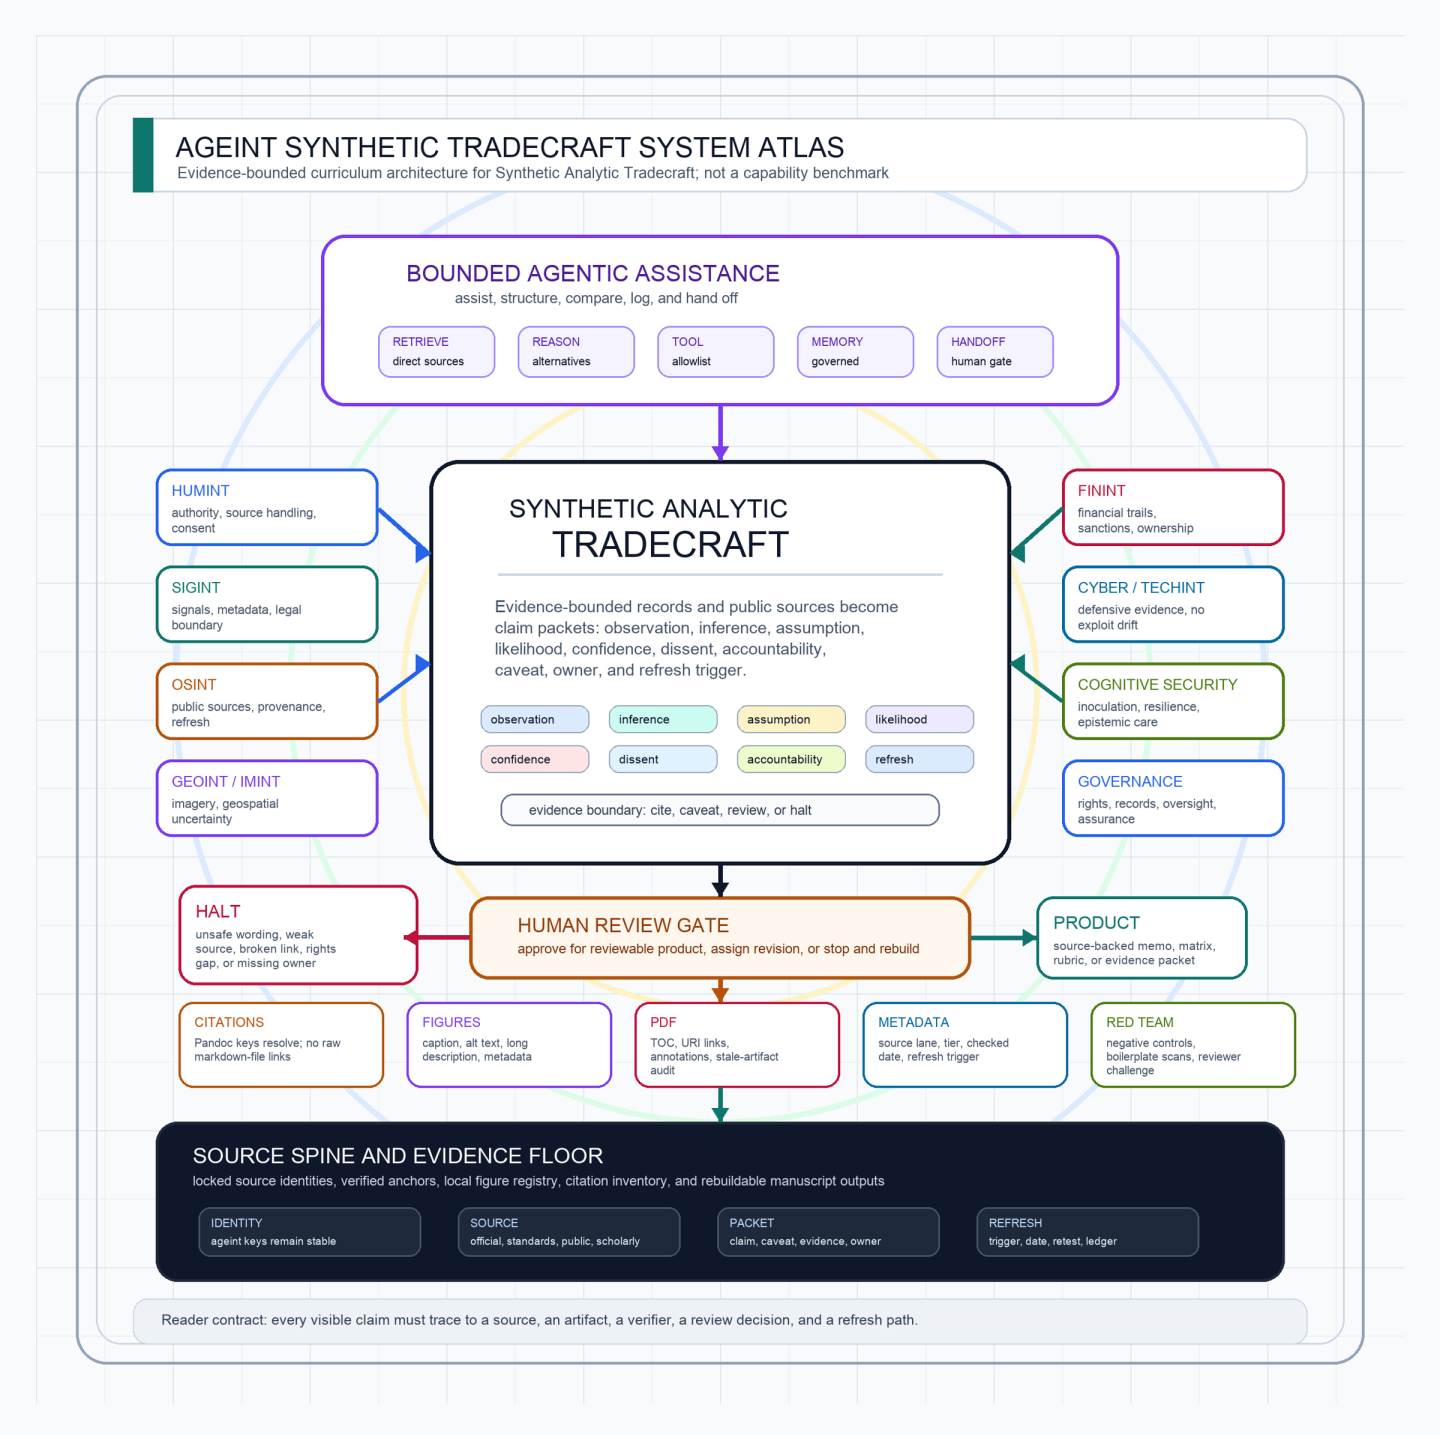

Figure 18: The Synthetic Tradecraft System Atlas replaces the former graphical abstract with a governed-system view of AGEINT. It shows the source spine as the evidence floor; intelligence disciplines as collection and context lanes; Synthetic Analytic Tradecraft as the central claim-making contract; bounded agentic assistance as a limited support layer; and verification, safety, and human-review gates as the outer assurance ring. The figure is a curriculum architecture map, not a claim that AGEINT has measured field capability or learning outcomes.

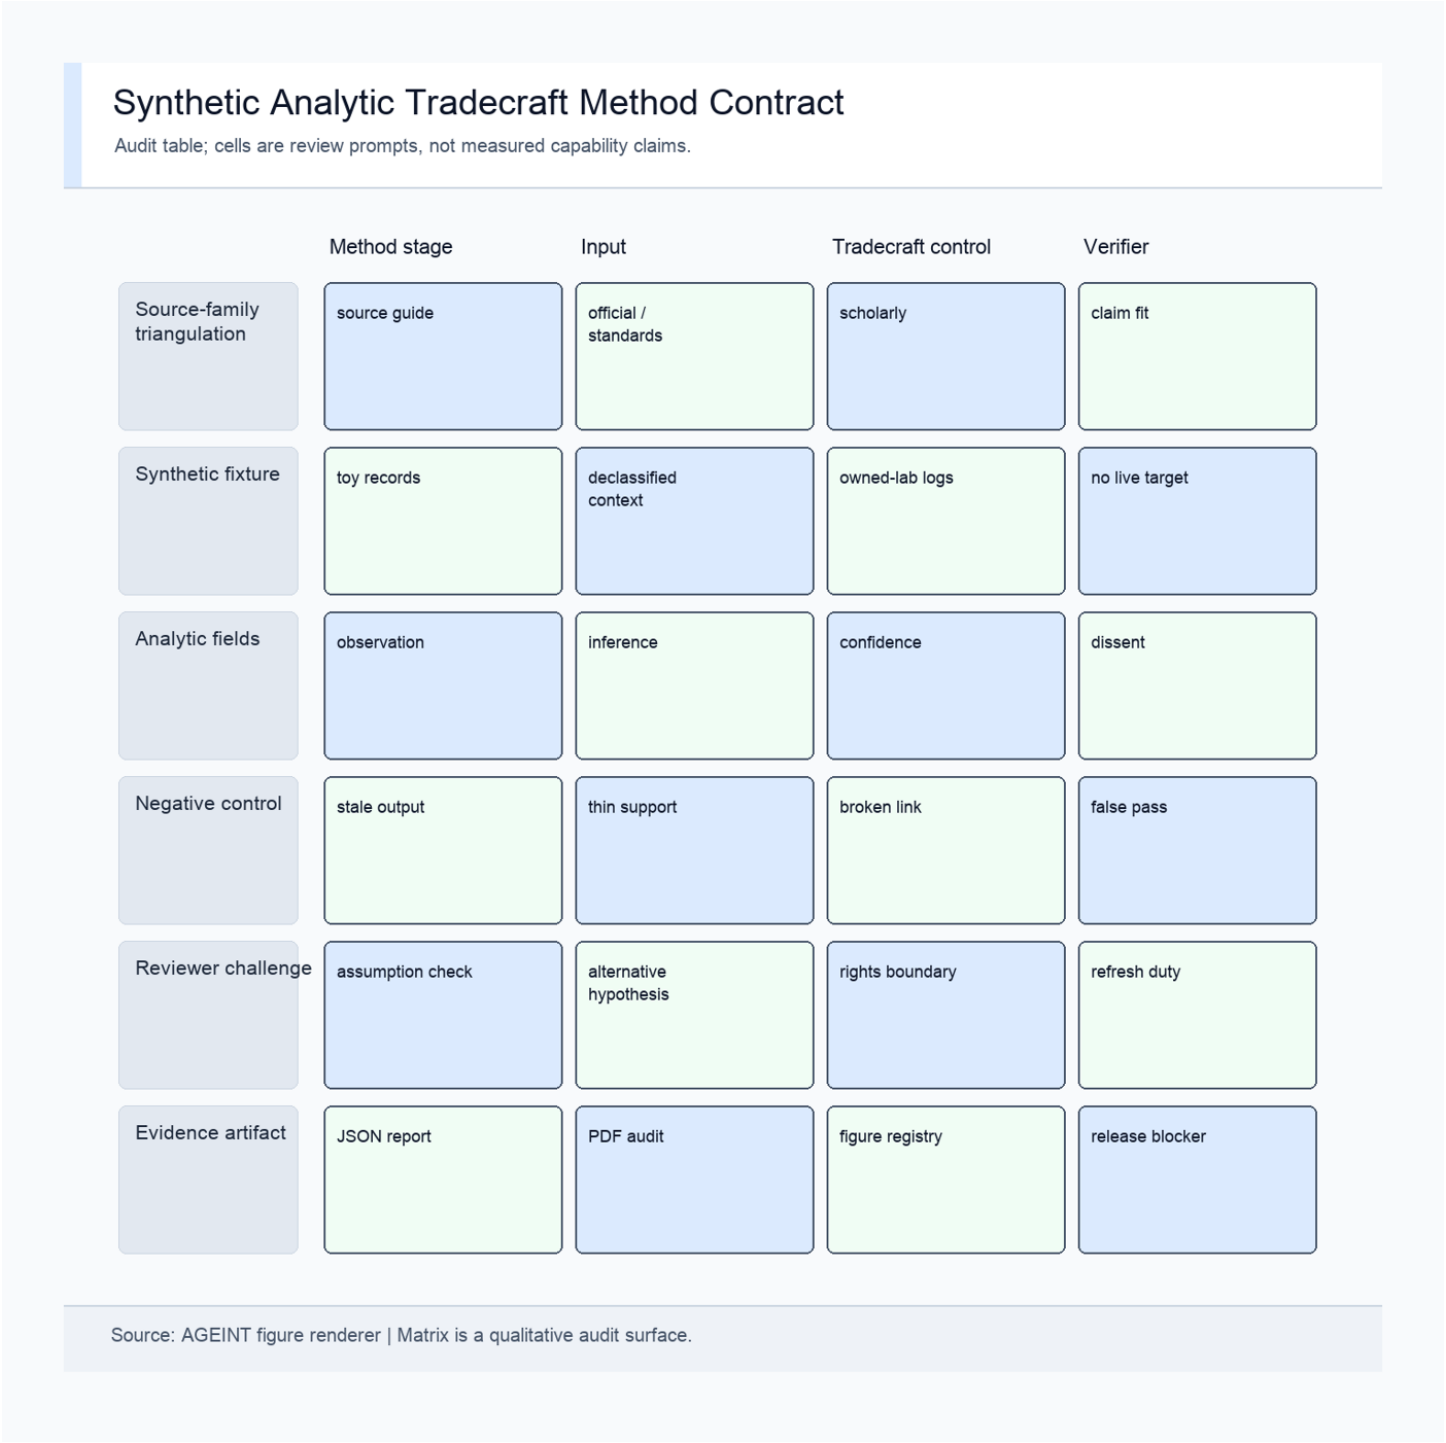

Figure 19: The method-contract figure makes AGEINT's Synthetic Analytic Tradecraft claim falsifiable. It links source-family triangulation, synthetic fixtures, analytic field separation, negative-control testing, reviewer challenge, and artifact-evidence reports so early manuscript claims remain method commitments rather than prestige language. Its reader value is to make synthetic tradecraft method contract labels, source records, review gates, refresh cues, and reader-use boundaries visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

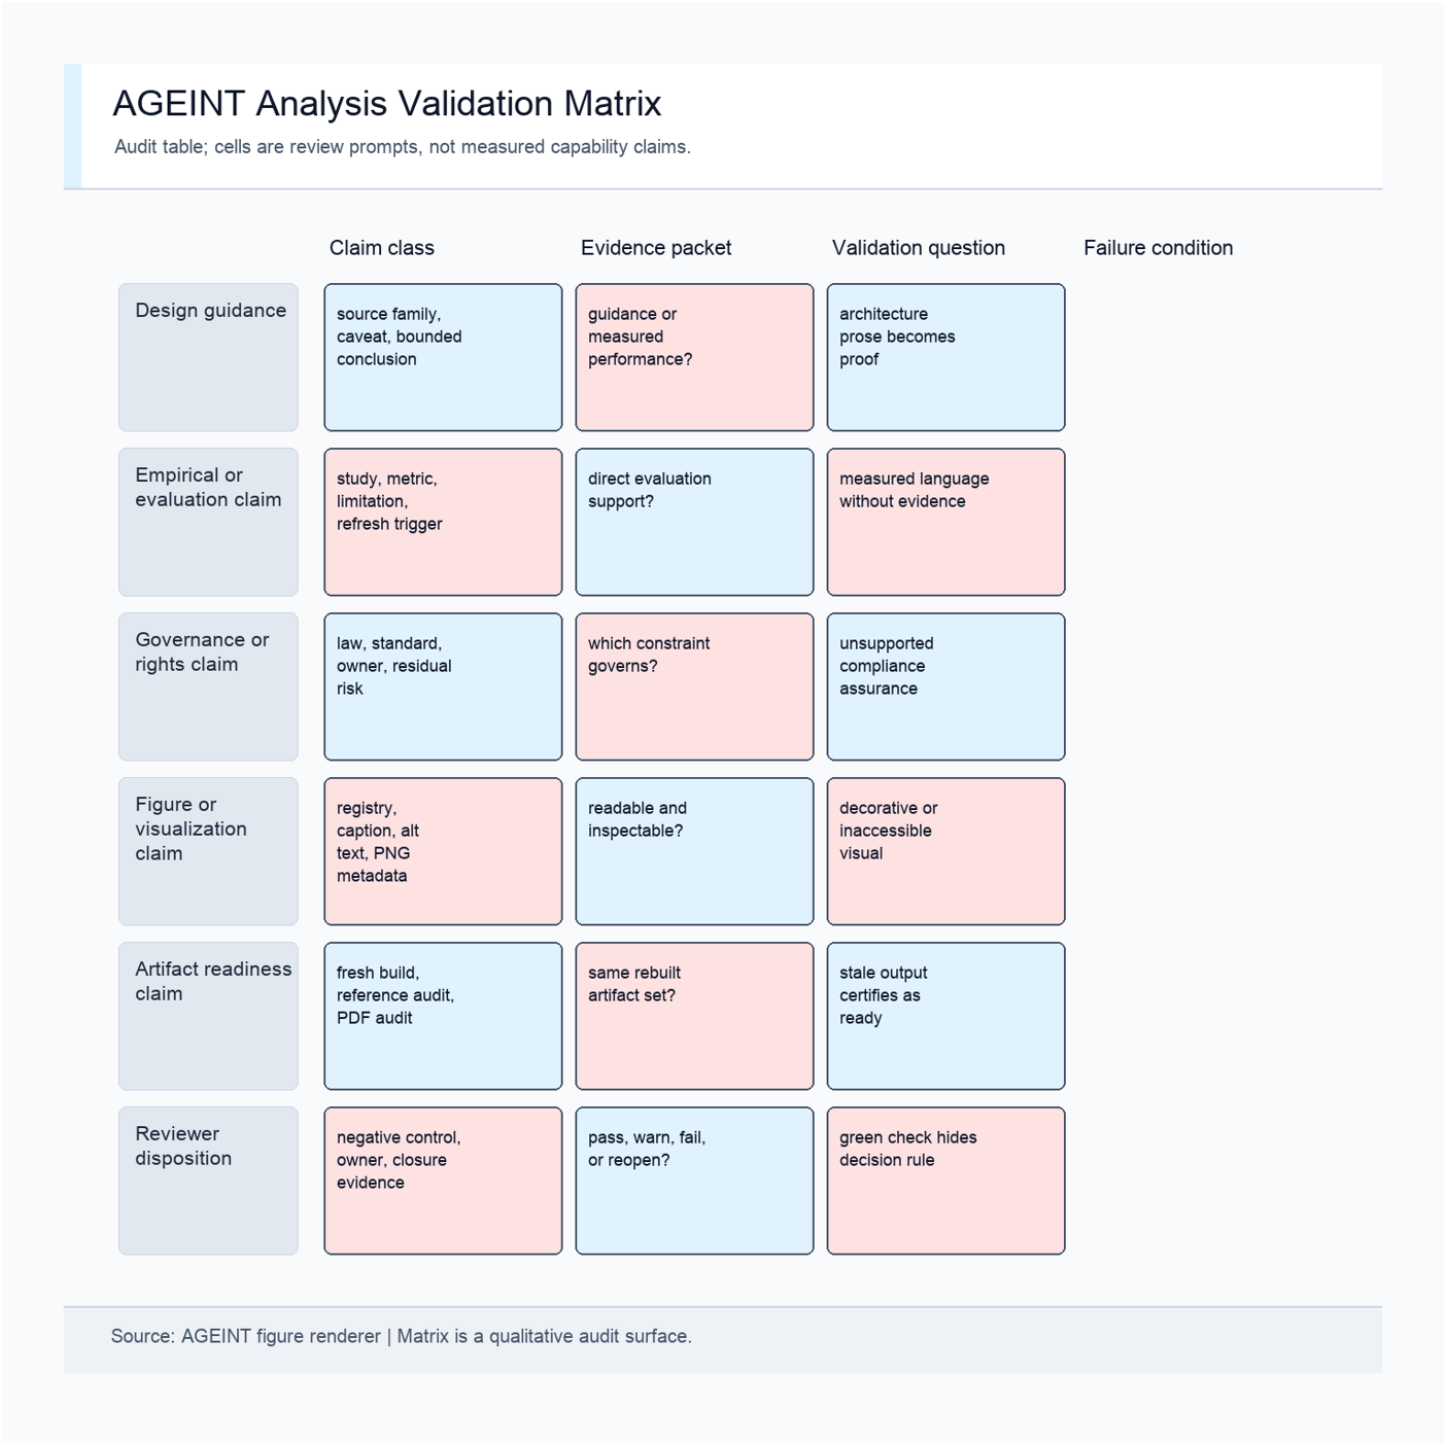

Figure 20: The analysis-validation matrix makes the manuscript's scholarship and assurance claims reviewable by class. It separates design guidance, empirical or evaluation claims, governance claims, figure/readability claims, rendered-artifact readiness claims, and reviewer disposition claims so each one has a required evidence packet, validation question, failure condition, and remediation path.

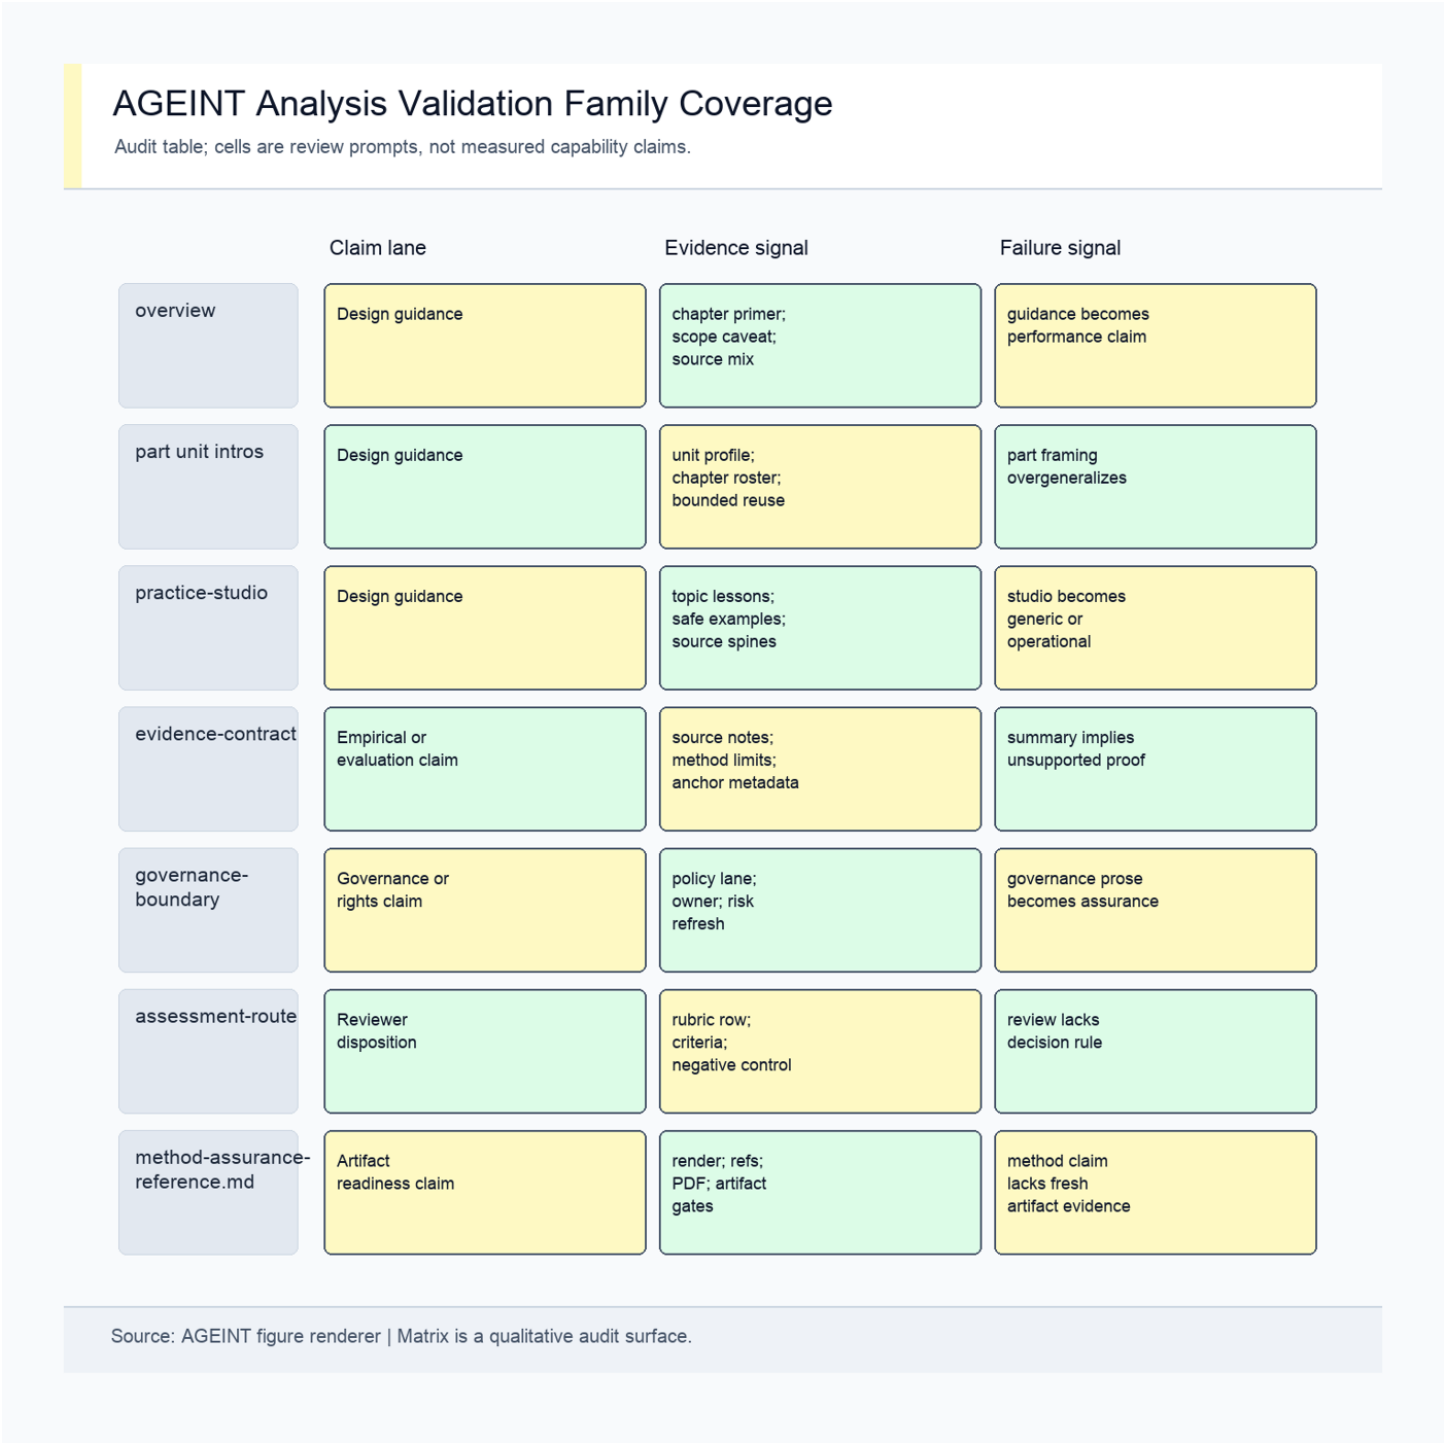

Figure 21: The analysis-validation family-coverage figure closes the gap between method prose and generated manuscript structure. It maps each claim-bearing manuscript family to a canonical analysis-validation lane, the evidence signal that should be present, and the failure signal that should block local readiness if a family becomes claim-bearing without a review class.

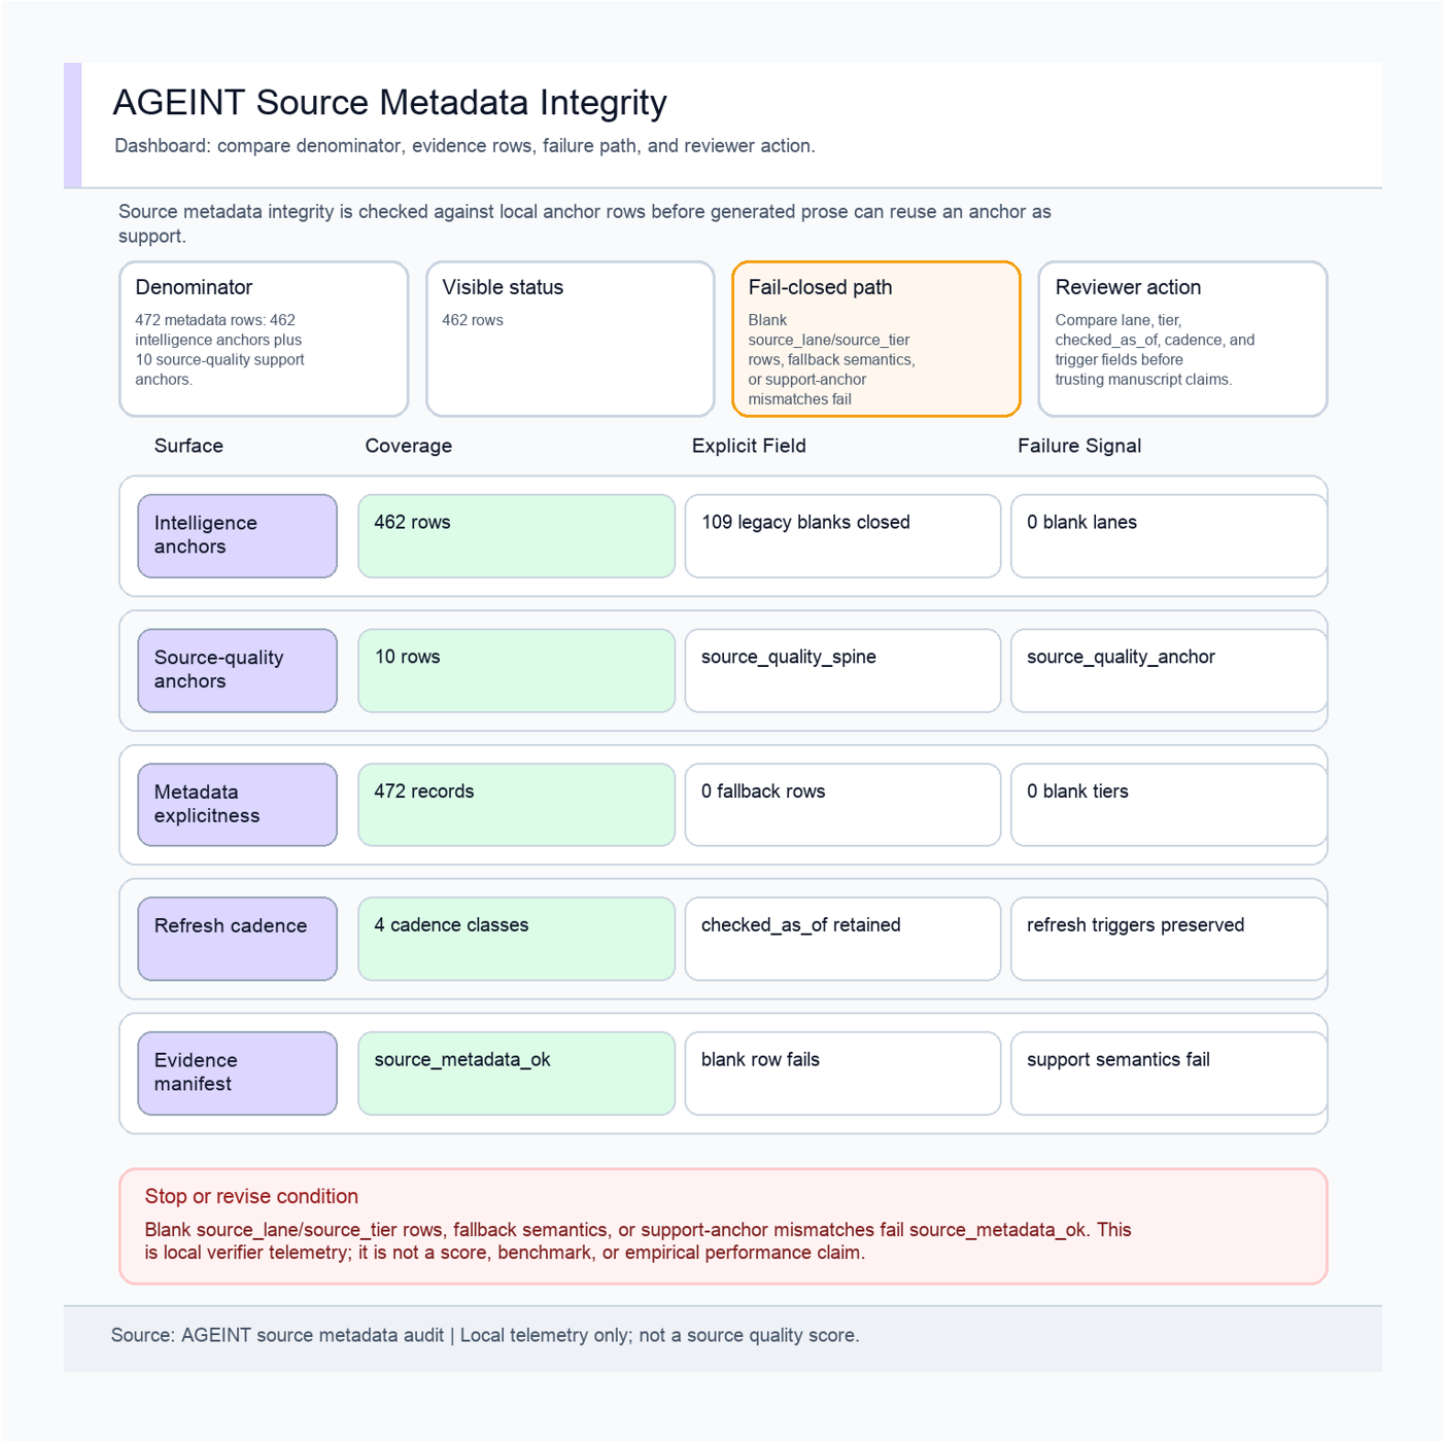

Figure 22: The source metadata integrity figure makes the anchor-lane hardening contract visible to reviewers. It separates curated intelligence anchors, source-quality support anchors, explicit lane and tier fields, refresh cadence evidence, denominator context, reviewer action, and the artifact-evidence manifest failure path so source rows cannot silently fall back to broad domain or source-type semantics while the rendered PDF still appears locally ready. Read it as local metadata telemetry, not a quality score for the cited sources.

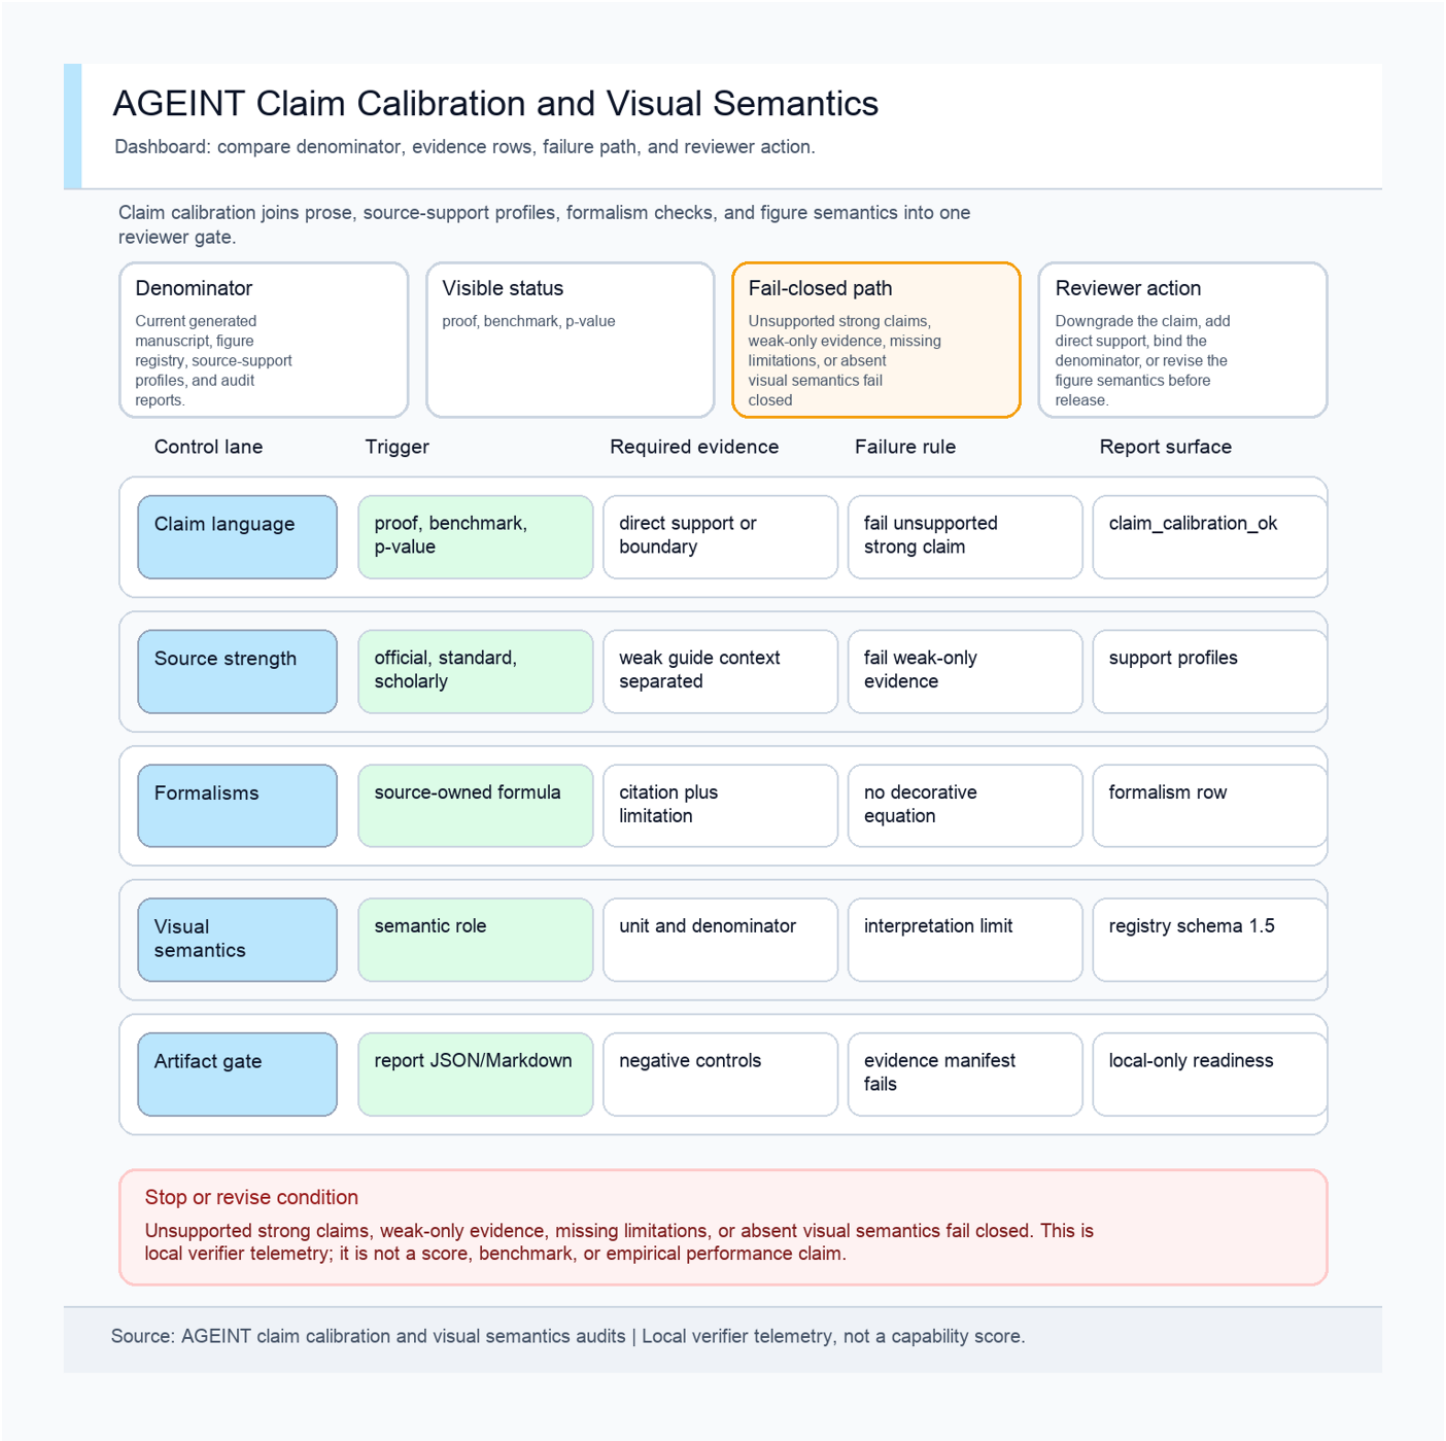

Figure 23: The claim-calibration verifier figure makes the final RedTeam/Science hardening layer visible: high-risk manuscript claims are separated into empirical, governance, visualization, artifact-readiness, safety, and formalism lanes; each lane must show direct support or explicit boundary language; weak source-guide context cannot carry measured-performance or statistical claims alone; and figure metadata must state semantic role, evidence role, quantitative status, denominator, counting rule, reviewer action, and interpretation limit before the artifact-evidence manifest can pass. Compare the local manuscript, registry, source-support, and report surfaces as reviewer inputs; do not read the visual as a score, benchmark, or empirical performance claim.

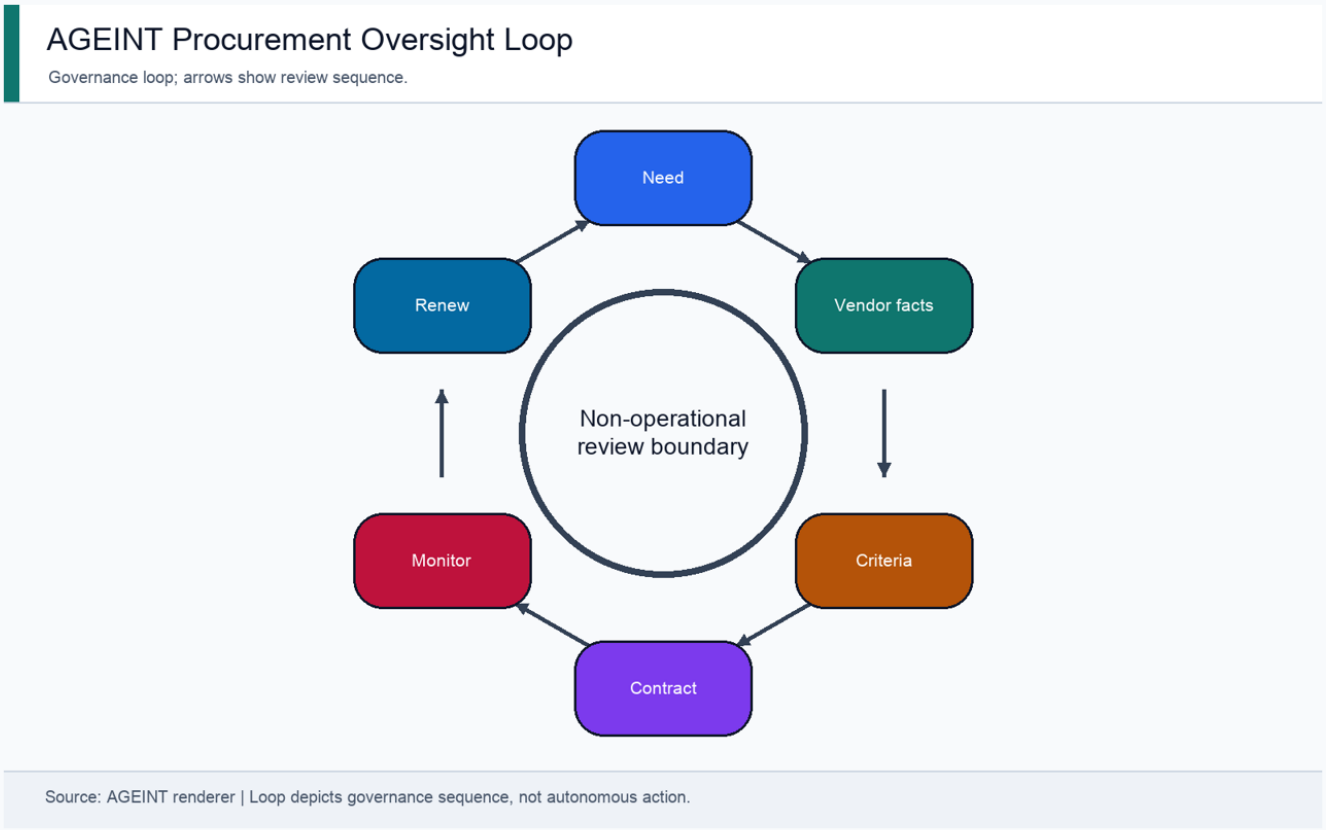

Figure 24: The procurement oversight loop connects need, transparency, criteria, contract controls, and lifecycle monitoring. It is anchored to the curriculum orientation; use it to inspect procurement oversight loop steps, decision gates, owner handoffs, refresh triggers, and closure evidence while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

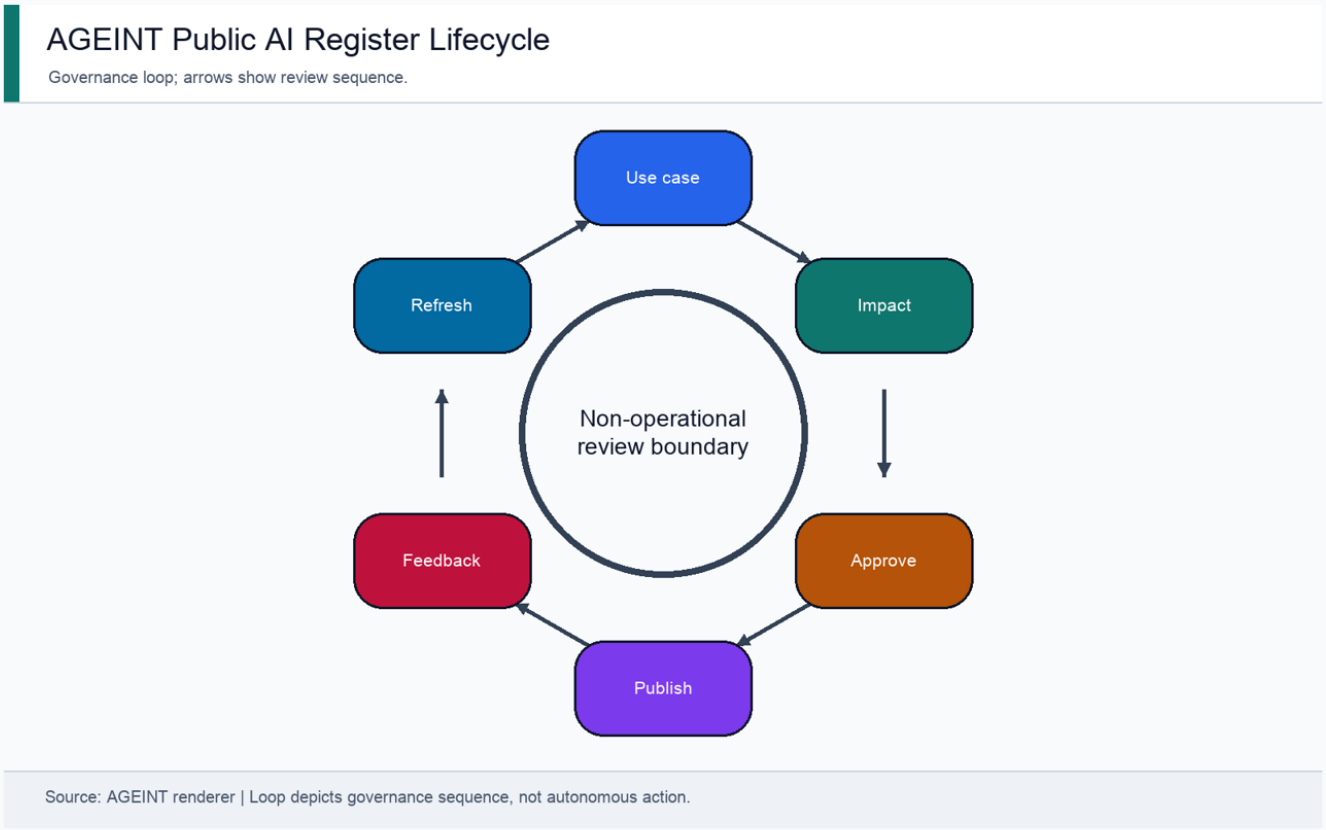

Figure 25: The public AI register lifecycle keeps use-case purpose, impact review, publication, feedback, and refresh visible. Its reader value is to make public ai register lifecycle steps, decision gates, owner handoffs, refresh triggers, and closure evidence visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

Figure 26: The model and dataset card keeps purpose, provenance, collection process, evaluation caveats, lifecycle controls, and review ownership visible for model and dataset claims. It is anchored to the curriculum orientation; use it to inspect model dataset card fields, row and column obligations, source records, reviewer decisions, and closure evidence while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

Figure 27: The boundary-control matrix shows how purpose, tool permissions, data access, human review, logging, and rollback constrain agentic assistance before any external action can occur. In the curriculum orientation, it lets readers compare agentic intelligence boundary categories, denominators, evidence lanes, limitations, and reviewer-use cautions so the visual functions as a traceable course aid rather than an unscoped assertion.

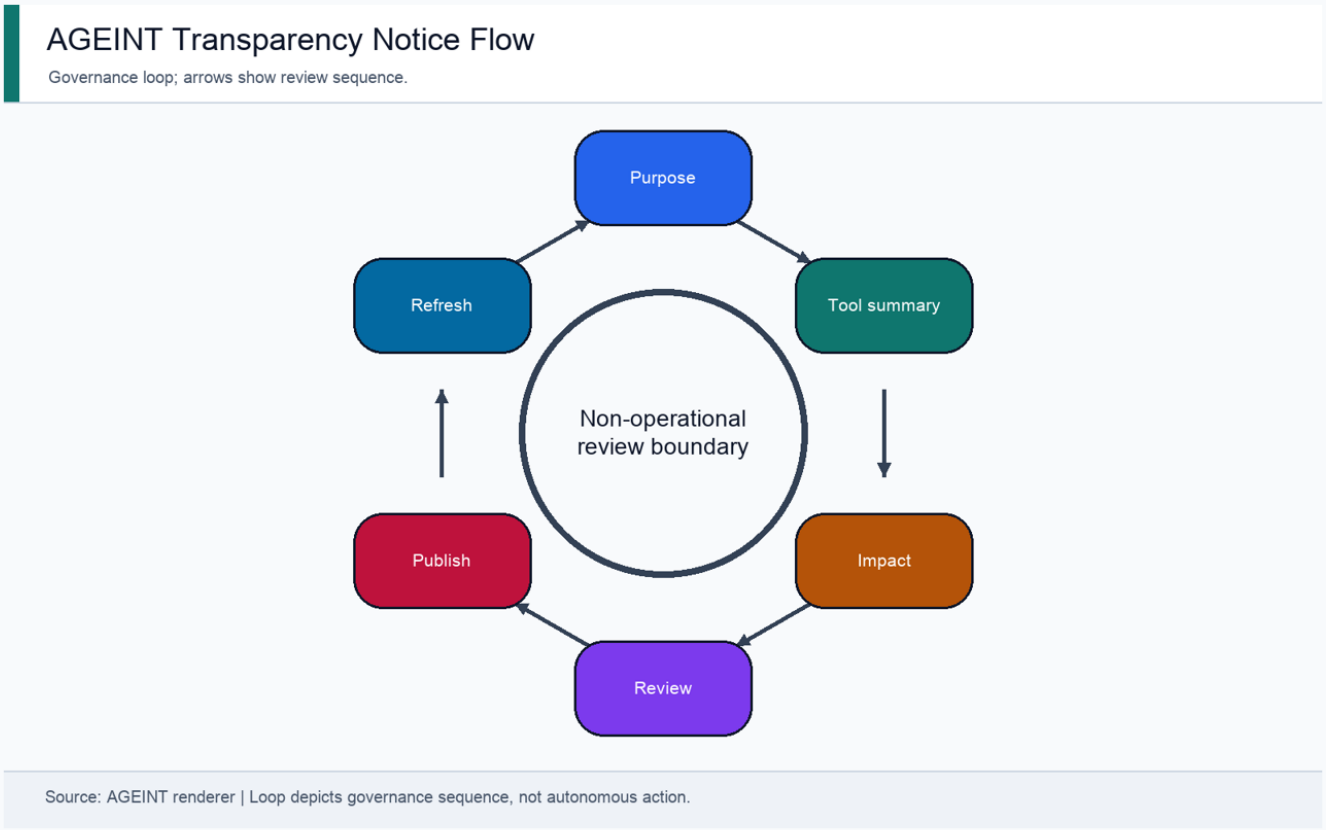

Figure 28: The transparency notice flow links public purpose, tool and data summary, impact review, and publication decisions. The captioned view belongs to the curriculum orientation and should be read as a map of transparency notice flow steps, decision gates, owner handoffs, refresh triggers, and closure evidence, not as a capability score or live-task instruction.

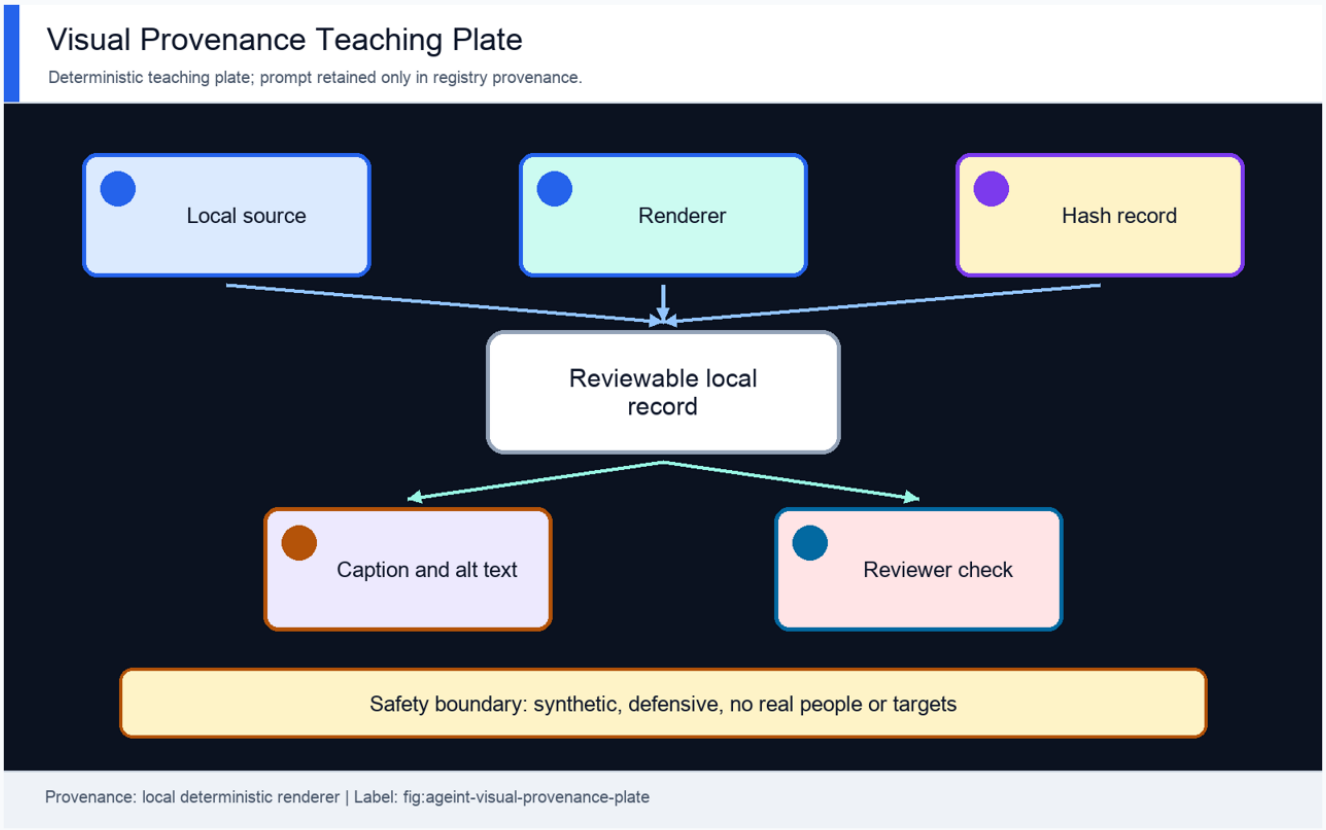

Figure 29: Deterministic teaching plate showing how AGEINT visual assets preserve local source, renderer, hash, caption, and review metadata before manuscript use. Its reader value is to make Local source, Renderer, Hash record, and Caption and alt text visible at a glance, with the curriculum orientation as the source section and defensive review as the boundary.

2.35 AGEINT pattern library: design-pattern rows, safe substitutions, and source identity

Source identity	Safe curriculum treatment	Methods	Defensive application	Safety boundary
Pattern 1: The Solo Reasoner (source identity only)	Focused Analytic Reasoner	bounded source reading, explicit assumptions, self-critique, and confidence notes	single public-source report critique with provenance and uncertainty fields	keeps reasoning reviewable without exposing hidden reasoning or delegating action
Pattern 2: The Reflection Agent (source identity only)	Reflection and Bias-Check Agent	rubric-based critique, source-quality scoring, and trajectory validation	analytic-bias review over a synthetic or public-source evidence packet	supports quality review and never replaces accountable human judgment
Pattern 3: The Tool-Forager (source identity only)	Tool-Allowlist Research Assistant	schema-bound tool calls, public-source retrieval, allowlisted connectors, and grounded summaries	accountable bibliography, source inventory, or standards-mapping exercise	excludes broad scraping, credentialed collection, and exposure-search tooling
Pattern 4: The Planner-Executor (source identity only)	Governed Planner-Executor	milestone decomposition, approval gates, dependency checks, and rollback notes	classroom project plan for evidence review, policy analysis, or tabletop preparation	plans curriculum artifacts only and does not create live operational tasking
Pattern 5: The Parallel Collector (source identity only)	Parallel Source-Corroboration Agent	bounded concurrent retrieval, deduplication, contradiction capture, and source descriptors	side-by-side comparison of public official, standards, and scholarly sources	uses public or provided materials and avoids intelligence collection expansion
Pattern 6: The Multi-Agent Crew (source identity only)	Role-Separated Review Crew	planner, retriever, validator, safety reviewer, and reporter roles	tabletop red-team critique of an analytic memo, not an operational exercise	keeps roles educational, logged, and constrained to benign artifacts
Pattern 7: The Debate Agent (source identity only)	Competing-Hypotheses Debate Agent	alternative generation, evidence challenge, dissent capture, and judge rubric	ACH-style review of a classroom claim with clearly separated evidence and judgment	does not generate adversarial persuasion or policy advocacy content
Pattern 8: The RAG-Operator (source identity only)	Provenance-Bound Retrieval Operator	curated corpus retrieval, hybrid ranking, source snippets, and citation audits	course-pack retrieval over provided readings, standards, and official guidance	does not connect to live sensitive stores or unapproved data collections
Pattern 9: The Memory-State Machine (source identity only)	Evidence-Memory State Machine	episodic note cards, retention limits, consolidation, and source change logs	longitudinal claim ledger for curriculum evidence and revision history	tracks claims and sources, not people, assets, or behavioral patterns
Pattern 10: The Control Plane Agent (source identity only)	Permissioned Control Plane Agent	single-interface routing, policy checks, budget limits, and audit logs	tool-governance demo that routes among benign summarization and validation utilities	keeps every tool revocable, observable, and constrained to evidence-bounded actions
Pattern 11: The Surveillance Agent (source identity only)	Monitoring-Governance Tabletop Agent	synthetic event polling, threshold rationale, alert review, and escalation logging	accountable monitoring governance exercise over toy asset-health records	prohibits tracking real people, real targets, private forums, or infrastructure
Pattern 12: The Red Team Agent (source identity only)	Control-Coverage Critique Agent	policy-safe scenario cards, control mapping, misuse-case review, and mitigation scoring	defensive tabletop review of controls against published high-level tactics	does not automate exploitation, weakness discovery, or attack-chain execution
Pattern 13: The Cover Story Generator (source identity only)	Identity-and-Provenance Fiction Audit	synthetic persona-risk critique, provenance labeling, and consistency-error detection	ethics exercise that detects fabricated identity artifacts in clearly synthetic materials	prohibits impersonation, false identity creation, and operational-security support
Pattern 14: The Deception Detector (source identity only)	Source-Reliability Verification Agent	corroboration, metadata review, provenance checks, and content-authenticity labels	public-source validation packet with uncertainty and review escalations	supports verification and does not accuse, deanonymize, or profile real people
Pattern 15: The Analyst in the Loop (source identity only)	Analyst-in-the-Loop Review Agent	interrupt gates, confidence thresholds, human approvals, and audit handoffs	supervised classroom analysis workflow for compliance-constrained exercises	requires accountable human review before any external communication or decision
Pattern 16: The Cyber Sentinel (source identity only)	SOC Tabletop Triage Agent	synthetic alert enrichment, ATT&CK mapping, severity rationale, and debrief notes	tier-1 incident tabletop over fabricated logs and published technique descriptions	does not run response actions, touch production systems, or publish indicators as fact
Pattern 17: The Supply Chain Inspector (source identity only)	Software Provenance Review Agent	SBOM reading, dependency graph review, advisory matching, and integrity questions	defensive package-governance exercise over sample manifests and public advisories	does not hunt real maintainers or produce exploitability claims without evidence
Pattern 18: The GEOINT Analyst (source identity only)	GEOINT Data-Quality Audit Agent	provided-image annotation, quality flags, geospatial metadata review, and caveat writing	synthetic imagery-change exercise focused on uncertainty and data quality	limits work to non-sensitive metadata quality, uncertainty notes, and synthetic location examples
Pattern 19: The Cognitive Inoculant (source identity only)	Cognitive-Resilience Education Agent	manipulation-technique labeling, transparent prebunking, and audience-harm review	opt-in media-literacy micro-lesson for a sample classroom scenario	does not design persuasion campaigns, microtargeting, or covert influence content

Source identity	Safe curriculum treatment	Methods	Defensive application	Safety boundary
Pattern 20: The Hierarchical Command (source identity only)	Hierarchical Curriculum Orchestrator	role delegation, output aggregation, exception routing, and failure recovery drills	multi-domain capstone coordination across benign module artifacts	orchestrates learning artifacts only and preserves human authorization gates

2.36 Safety rail: accountable, synthetic, defensive, and evidence-bounded boundaries

All exercises remain educational, lawful, defensive, historical, synthetic, and evidence-bounded. Modules may discuss intelligence, cyber, influence, counterintelligence, and industrial systems as objects of study, but they do not provide instructions for unauthorized collection, evasion, exploitation, manipulation, covert targeting, or real-world harm.

3 Method & Assurance Reference: claim evidence, safety gates, and refresh duties

This reference holds the shared method, governance, and assurance tables that every module applies. Each module links here instead of restamping the same tables, so a reader maintains one canonical copy of the capstone thread, claim ledger, competency rubric, refresh triggers, safety boundary, and mastery evidence. Module sections name their local source spine and topic, then point to the canonical table in this section.

3.1 Source-construction and reporting protocol: discovery records and citation boundaries

AGEINT is a curriculum-and-assurance atlas, not a PRISMA systematic review. Where a module makes a source-construction or literature-search claim, however, the source record follows PRISMA-S as a reporting discipline: record the discovery surface, search string or prompt, retrieval date, inclusion and exclusion rule, deduplication decision, source tier, conflict-handling note, direct URL, and refresh trigger [Melissa L. Rethlefsen, Shona Kirtley, Siw Waffenschmidt, Ana Patricia Ayala, David Moher, Matthew J. Page, Jonathan B. Koffel, and the PRISMA-S Group, 2021]. Discovery systems and summaries may suggest candidate sources, but final manuscript citations must resolve to directly checked official, standards, public-domain, or scholarly records in the AGEINT source atlas.

The review gate separates claim types before citation assignment. Governance claims require official or standards anchors; technical and theoretical claims require direct domain sources; empirical capability claims require evaluation or study evidence with context and subgroup caveats. If a source only supports an analogy, lesson design, or governance rationale, the generated prose must not promote it into a benchmark, deployment claim, or proof of autonomous performance.

3.2 Claim calibration and statistical limits: artifact telemetry versus empirical evidence

AGEINT treats citation counts, generated file counts, figure counts, PDF page counts, URI-link counts, and validator outcomes as **artifact telemetry**. They show what the local build produced and what the verifier checked; they are not learning-effect estimates, operational-performance measures, safety guarantees, or statistical evidence that the curriculum improves real-world analytic decisions. Stronger empirical or evaluated-capability language requires a direct benchmark, study, field evaluation, incident dataset, or scholarly empirical source with the method, denominator, subgroup/context caveat, and refresh trigger visible.

The claim-calibration audit enforces that separation after manuscript generation. It scans high-risk empirical, statistical, governance, safety, visualization, artifact-readiness, and formalism language; records the citation keys and source-support strength visible in the same row; allows explicit boundary language such as "not a benchmark" or "correct the misconception"; and fails unsupported proof-language, p-values, measured-performance claims, or formalisms without citations and limitations. The companion visual Figure 23 makes the control surface readable, while `output/reports/claim_calibration.json` and `.md` make the same disposition auditable by script.

This is a heuristic screen of row-level wording, citation presence, and source metadata—not a semantic claim verifier. It does not establish that a cited passage entails a claim, that sources are independent, that contradictory evidence was included, or that a proposed control works. Boundary wording can also explain why a row is allowed without validating another claim in that row. A passing report therefore leaves a human source-to-claim review duty; the worked procedure below makes that duty inspectable.

Protocol claims are version-sensitive. MCP references use the 2025-06-18 specification for interoperability language and the current MCP security best-practice page for confused-deputy, token-handling, consent, and least-privilege examples; those claims must refresh when the protocol version, authorization profile, transport guidance, or security model changes [Model Context Protocol Project, 2025b]; [Model Context Protocol Project, 2025a]. Memory-language claims follow the same separation rule: MCP and official agentic-AI guidance support external-memory governance, tool boundaries, logging, and retention, not cognitive-taxonomy claims about episodic, semantic, or procedural memory unless a domain source is cited for that narrower taxonomy.

3.3 Method figures and course links: assurance visuals and navigation

The orientation uses Figure 10 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.

Navigation links: Section 2, Section 4.

3.4 Capstone phase, artifact, and review-gate ladder: required handoff sequence

Navigation. Parent section: Section 3.

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

3.5 Claim and evidence ledger: claim classes, evidence floors, and review duties

Navigation. Parent section: Section 3.

Claim class	Evidence required	Review gate
Source-spine claim	Parsed module title, module section map, and curriculum citation spine	Confirm the generated text does not invent counts, paths, or labels.
Research-backed governance claim	Direct official, standards, public-domain, or scholarly anchor, exact passage, version/date, and applicability limits	Confirm the passage supports the stated obligation or recommendation; a checked URL alone does not establish entailment.
Agentic workflow claim	Tool boundary, authority contract, human review point, and rollback condition	Confirm the workflow remains educational, logged, reversible, and evidence-bounded.
Technical or theoretical claim	Direct domain source for the formal expression, protocol, architecture, or theory, with analogy limits spelled out	Confirm the prose does not cite governance guidance as proof of technical performance or autonomous agency.

Claim class	Evidence required	Review gate
Empirical or evaluated capability claim	Direct benchmark, field evaluation, user study, incident evidence, or scholarly empirical source with context and subgroup caveats	Confirm the claim is not merely inferred from the AGEINT curriculum architecture.
Source-construction claim	Search surface, query or prompt, retrieval date, inclusion and exclusion rule, deduplication note, source tier, and direct URL	Confirm discovery sources are not treated as final citations unless directly verified.
Safety claim	Explicit prohibition plus safe alternative	Confirm the module blocks live targeting, exploitation, covert collection, manipulation, and unsafe cyber-physical action.
Cross-module claim	Link to the current unit and adjacent curriculum modules	Confirm the handoff names inputs, outputs, uncertainty, and next-review owner.

3.6 Analytic workflow: question, evidence, challenge, and disposition

Use this procedure with a module's own sources and safe-practice material. It is a proposed classroom method, not a validated accuracy improvement. Analytic standards motivate explicit sourcing, assumptions, alternatives, and uncertainty; critiques of judgment aids make evaluation of those practices necessary rather than optional [Office of the Director of National Intelligence, 2015]; [Mandel and Tetlock, 2018].

1. **Frame the decision.** Name the question, audience, time horizon, allowed inputs, excluded actions, and human decision owner. State what evidence would be sufficient for the classroom disposition; do not silently expand collection.
2. **Preserve observations.** Record a source identifier, exact passage or data item, locator, author/publisher, event time, publication time, retrieval time, version, and any transformation or translation. Preserve the original and distinguish a supplied fixture from a verified real-world observation.
3. **Trace origins before counting support.** Link a repost, quotation, syndication, model summary, and translation to their upstream observation. Different URLs, publishers, models, or source families do not establish independent evidence. Unknown dependence stays unknown.
4. **Assess fitness for this claim.** Separate provenance/authenticity, source access and reliability, content credibility, relevance, temporal fit, and independence. A genuine official document may describe a policy rather than an outcome; a signed image may still be miscaptioned. Record the weakest link instead of turning heterogeneous criteria into an unexplained score.
5. **Compare explanations.** Separate observation, inference, and assumption. Name credible alternatives, including ordinary error or missing context. Ask which observation would be expected under each and which next check could change the judgment. Do not count supportive rows as posterior odds. Absence is informative only where the observation opportunity, expected detection, and reporting coverage make that absence meaningful.
6. **Write uncertainty in separate fields.** Event likelihood concerns the proposition; analytic confidence concerns its evidentiary basis. Give the basis, contradictions, missing information, and sensitivity to assumptions. Do not invent percentages to make a sparse case look calibrated.
7. **Challenge the record.** A reviewer checks the original passages rather than just the narrative. Add a duplicate report, remove a key source, and introduce a contradictory fixture. Record whether the dependency count, judgment, and confidence change for a defensible reason. This tests the artifact and review process, not universal resistance to manipulation.
8. **Dispose and hand off.** Choose accept for bounded classroom reuse, revise, hold, or reject. Retain unresolved dissent, recipient/handling limits, reviewer, next check, and refresh trigger. A human—not a generated confidence label—owns the decision. If evidence changes, version the correction, mark affected claims, and notify downstream packet owners.

3.6.1 Reusable claim record: fields a reviewer can actually inspect

Navigation. Parent section: Section 3.

Copy the field names below into a worksheet and replace the case values. Keep evidence and judgment in separate cells; an agent's generated explanation is not a record of its hidden reasoning or an additional source observation.

Field	Required entry
Claim identity and scope	One falsifiable proposition, its audience and time horizon; claim type and packet version.
Evidence and origin	Source IDs, exact excerpts/values and locators, acquisition/version dates, upstream origin, and dependency group.
Support relation	Supports, contradicts, contextualizes, or cannot determine; explain the narrow link to this claim.
Quality and limits	Access/reliability, authenticity, relevance, temporal fit, missing coverage, and transformations.
Alternatives and assumptions	Credible competing account, load-bearing assumption, and discriminating next observation.
Likelihood and confidence	Separate entries with a stated basis, or explicitly not assessed; retain substantive dissent.
Disposition and correction	Accept/revise/hold/reject, named human owner, allowed audience, refresh trigger, and affected downstream packets.

3.6.2 Completed synthetic case: three reports are not three observations

Navigation. Parent section: Section 3.

Question. May a classroom brief say that a fictional library's service interruption was caused by a cyberattack? All records below are invented, offline teaching cards; no real library, account, person, or system is involved. The task is an analytic disposition, not incident attribution or response.

Evidence card	Observation and provenance	Relation to the causal claim
R1: supplied screenshot	An undated status image says "service unavailable"; original capture time is unknown.	Supports only that the image contains that message, not an attack or a current outage.
R2: supplied newsletter	Quotes R1 verbatim and cites its screenshot; no separate observation is supplied.	Same dependency group as R1; repetition does not independently corroborate the event.
R3: supplied maintenance notice	A fixture identified as the fictional library's notice schedules maintenance during the alleged interruption.	Makes planned maintenance a credible alternative; a schedule alone does not prove what occurred.

Record field	Completed entry
Claim C1	"A cyberattack caused the reported interruption"; causal, classroom brief, fixture period only.
Observation	R1 contains an unavailable message; R2 repeats it; R3 schedules maintenance.
Inference	The packet cannot distinguish an attack, ordinary failure, planned maintenance, or a stale screenshot.
Assumption	R1 depicts the same service and period as R3; this remains unverified.
Independence	R1 and R2 share one origin; R3 has a separate supplied origin but a different claim scope.
Event likelihood	Not quantified: neither a defensible base rate nor discriminating incident evidence is supplied.
Analytic confidence	Low for any causal attribution; high for the directly inspectable R1-to-R2 copying relation within this fixture.
Dissent and next check	Preserve an alternative causal assessment if offered; request an instructor-provided time-bounded incident record, not access to a live system.
Disposition	Hold C1. A human instructor may accept only the narrower statement that the supplied records leave cause unresolved.
Refresh and handoff	Reopen when a dated independent incident card arrives; retain packet version, reviewer, and the list of classroom briefs that used C1.

Expected negative controls. A further copy of R1 adds no independent observation. Removing R3 removes a supported alternative but does not make an attack established. A new card showing that R1 predates the alleged event weakens even the same-period outage inference. If a reviewer still accepts C1 because "three sources agree," revise the source-origin and support-relation fields before scoring prose quality.

3.6.3 Bounded agent collaboration: parallel work without manufactured consensus

Navigation. Parent section: Section 3.

Use a single analyst or agent when the question is small or the next step depends on the previous result. For independent work, assign source-disjoint or method-distinct tasks under one common question, time horizon, allowed-input set, and output schema. Each worker returns evidence IDs and exact locators, origin/dependency groups, its narrow claim, contradictions, uncertainty, and missing inputs—not merely a confident summary.

One human integration owner deduplicates upstream observations, reconciles scope and time differences, and records disagreements before drafting the joint conclusion. Do not multiply evidentiary weight by the number of agreeing agents: shared training, prompts, retrieval, or memory may create common-mode errors. A separate reviewer must inspect the load-bearing originals and an intentionally contradictory fixture. Role separation is a proposed control, not evidence that the reviewers are independent or that multi-agent work is more accurate. Stop workers from expanding authority, writing unreviewed shared memory, or converting retrieved source instructions into tool authority; hold the handoff when a material source cannot be checked.

3.6.4 Decision boundaries: stop, abstain, and correct

Navigation. Parent section: Section 3.

Stop an exercise for missing authority, private or live-target material, unapproved external action, or an unsafe physical request. Hold a material claim when a source cannot be inspected or a contradiction could reverse the decision; do not replace the missing evidence with an agent consensus. Abstention is a legitimate analytic output when it specifies the unresolved question and next discriminating check. An analytic hold is not permission to delay a real safety escalation: any real incident goes to the responsible human authority under the institution's existing procedure.

3.7 Competency and mastery rubric: scoring dimensions and visible proof

Navigation. Parent section: Section 3.

Competency	Evidence of mastery
Conceptual command	Defines the distinction and applies it to a new case without confusing reporting, inference, and authorization.
Analytic rigor	Traces each material claim to an exact passage and origin, tests a credible alternative, and revises when contradictory evidence arrives.
Agentic design	Demonstrates an allowed request, a denied request, a review handoff, and a recovery decision using synthetic records.
Governance and rights	Identifies the applicable authority and affected party, explains necessity and proportionality, and assigns retention and contestability owners.
Safety posture	Stops at an excluded action or unresolved authority boundary; a polished output cannot compensate for an unsafe action.

3.8 Refresh triggers and required actions: source, safety, and tool-change duties

Navigation. Parent section: Section 3.

Trigger	Required action
Source guide reference changes	preserve existing `ageintNNN` identities and append new references only after the locked range
Official or standards source updates	inspect the changed passage and version, reassess dependent claims, then update the checked date and metadata
AI law, public-sector policy, education guidance, or rights guidance changes	distinguish jurisdiction, legal status, effective date, and local policy before rerunning the rights map
API, protocol, data-space, or provenance specification changes	pin the new version and reassess interface, authorization, and provenance assumptions before reuse
Safety audit finds operational wording	stop the affected exercise and replace the treatment with tabletop, audit, governance, or synthetic-data framing
Instructor debrief finds unreproducible or contradicted evidence	mark affected claims disputed or withdrawn, notify packet recipients, and retain the correction and review decision

3.9 Safety boundary: accountable, synthetic, defensive, and evidence-bounded practice

Navigation. Parent section: Section 3.

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded. Do not convert any module into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action. Where a module inherits a risky source motif, treat it as a tabletop, audit, provenance, or governance exercise.

3.10 Mastery evidence standard: retained artifacts, reviewer challenge, and transfer

Navigation. Parent section: Section 3.

Level	Evidence in the answer
Strong	Another reviewer reproduces the source-to-claim link; the learner handles a withheld contradiction, preserves dissent, and makes a bounded transfer judgment.
Adequate	The core claim is supported and safely bounded, but a dependency, alternative, or next-review decision needs revision before reuse.
Revise	The answer relies on definitions, citation counts, fluency, unsupported certainty, or an untested checklist instead of inspectable evidence.

4 FOUNDATIONS OF INTELLIGENCE TRADECRAFT

4.1 FOUNDATIONS OF INTELLIGENCE TRADECRAFT learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 4.

4.1.1 intelligence-cycle governance discipline spine: domain question and learning focus

Navigation. Parent section: Section 4.
This unit teaches **intelligence-cycle governance**. Requirements, collection, processing, analysis, dissemination, feedback, records, and oversight remain distinct so learners can see when research becomes intelligence work.

4.1.2 intelligence-cycle governance source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 4.
Use source-guide citations for inherited curriculum topics and official/standards anchors for claims about authority, quality, records, and review.

4.1.3 intelligence-cycle governance practice artifact: recurring packet and retained evidence

The recurring practice artifact is a **requirements-to-product traceability ledger** that draws on requirement card, source descriptor, confidence statement, and dissemination and records note. The unit keeps its learning spine explicit. Classroom packet: a fictional storm desk must decide whether to postpone tomorrow's seminar. Bulletin A forecasts disruption; map B is two years old; notice C cancels today's bus service only.

1. Write a requirement card naming tomorrow's seminar, the decision deadline, and the instructor as customer; reject a stale requirement about today's attendance.
2. Log each item's origin, date, and coverage, then separate the forecast from observed cancellations and identify the missing tomorrow-service notice.
3. Test the draft against notice C with its date hidden, then restored: today's cancellation must not become evidence of tomorrow's cancellation.
4. Submit a brief saying disruption is possible but tomorrow's transport status is unresolved; evidentiary confidence is limited by the missing current notice. Retain the source ledger and ask the customer whether this answers the requirement. Stop at the deadline without inventing service status; hand the unresolved notice check to the instructor before any dissemination beyond the class. The common claim-record format is provided in Section 3.6.

4.1.4 intelligence-cycle governance safety boundary: accountable, synthetic, and evidence-bounded limits

Activities stay inside public, synthetic, or instructor-provided materials and never become live collection or tasking.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint238]; [ageint237].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint238]; [ageint237].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint238]; [ageint237].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint238]; [ageint237].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Analytic Tradecraft and Source Integrity. Core anchors: [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]. Conceptual focus: turning uncertainty into reviewable judgment through sourcing, alternatives, separated likelihood and confidence language, warning indicators, and explicit analytic lineage. Composability contract: every agent output must preserve evidence, assumptions, judgments, likelihood, confidence, dissent, empirical limits, and change history as separable fields. **Practice lens:** Structured-Judgment Lens; Which assumptions, alternatives, confidence statements, and source limits must stay visible for review? [ageint238]; [ageint237].

4.1.5 FOUNDATIONS OF INTELLIGENCE TRADECRAFT visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 30, Figure 31, and Figure 32 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 3, Section 5.

4.1.6 FOUNDATIONS OF INTELLIGENCE TRADECRAFT module roster and source-lane inventory: citations, lanes, and learner route

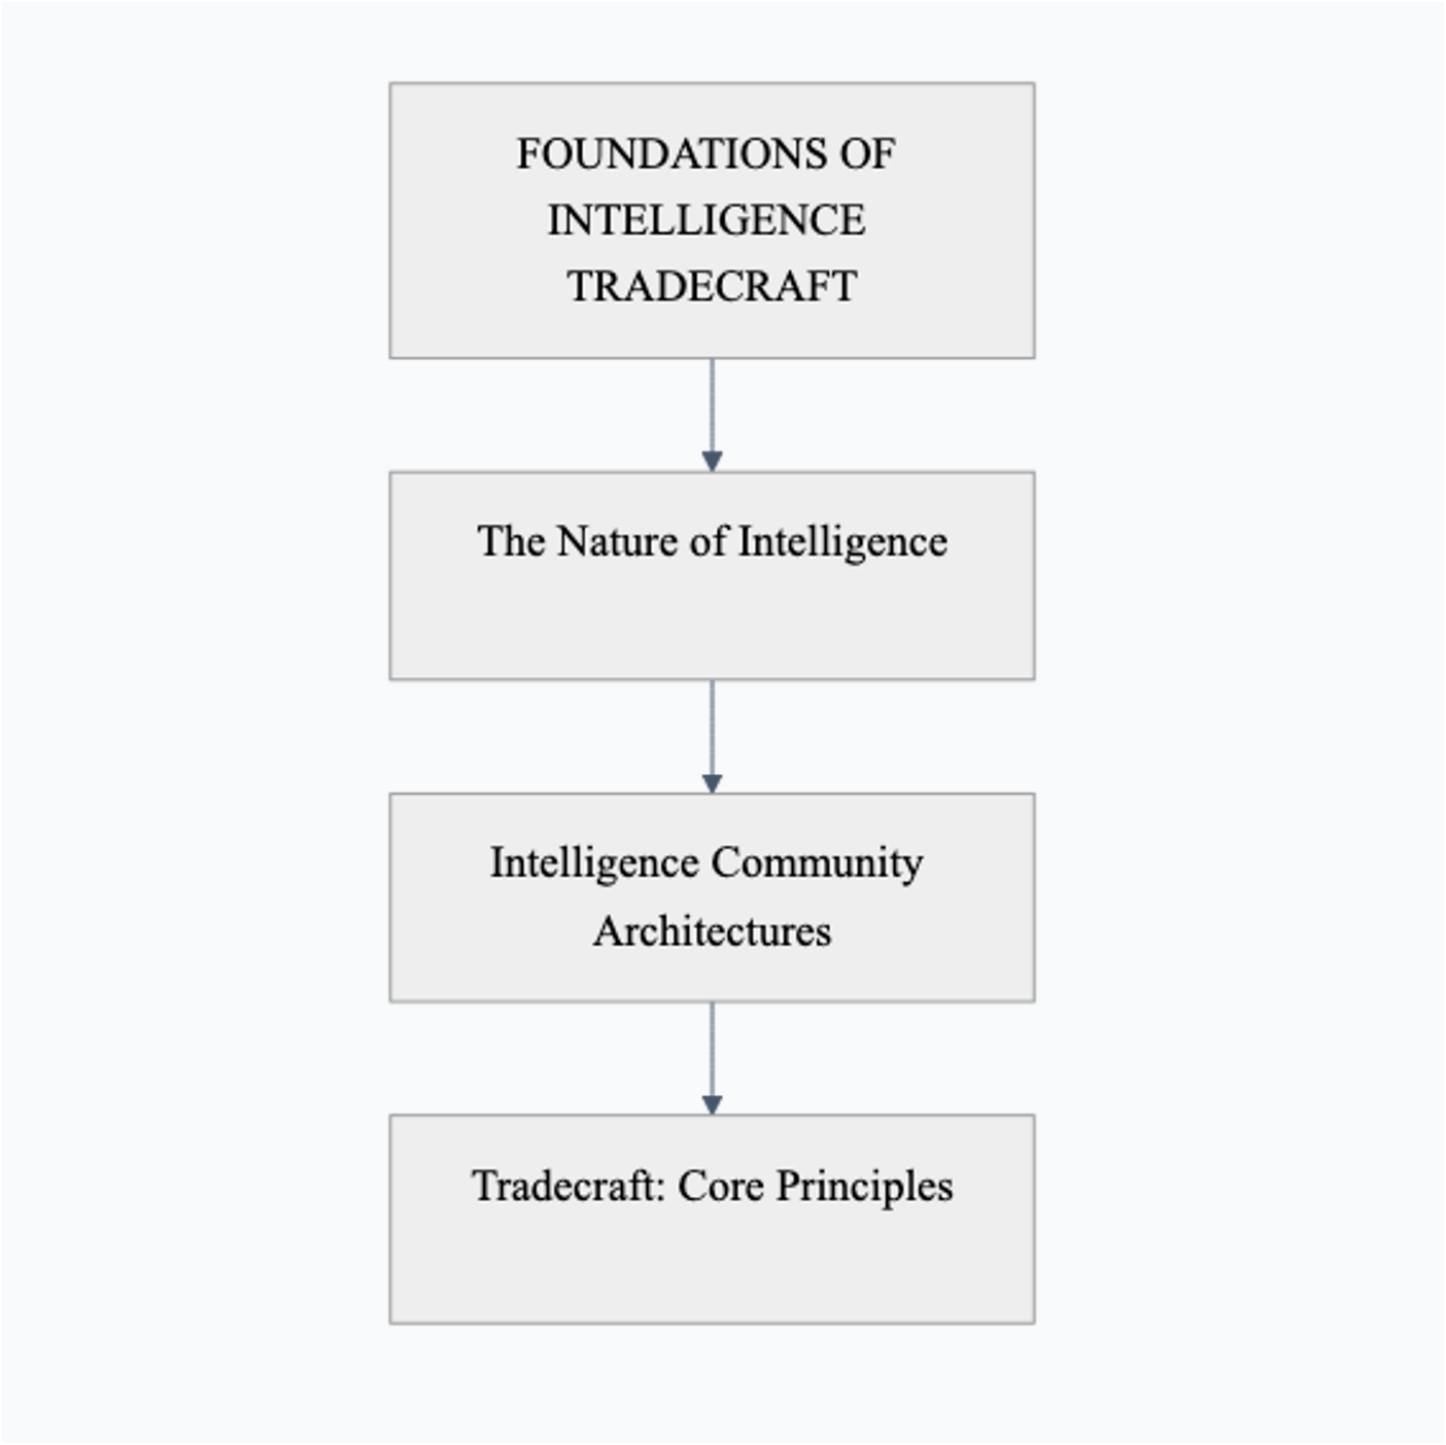

Figure 30: The FOUNDATIONS OF INTELLIGENCE TRADECRAFT module map traces the part's chapters as a linear reading sequence. The captioned view belongs to the foundations of intelligence tradecraft section and should be read as a map of 3 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last, not as a capability score or live-task instruction.

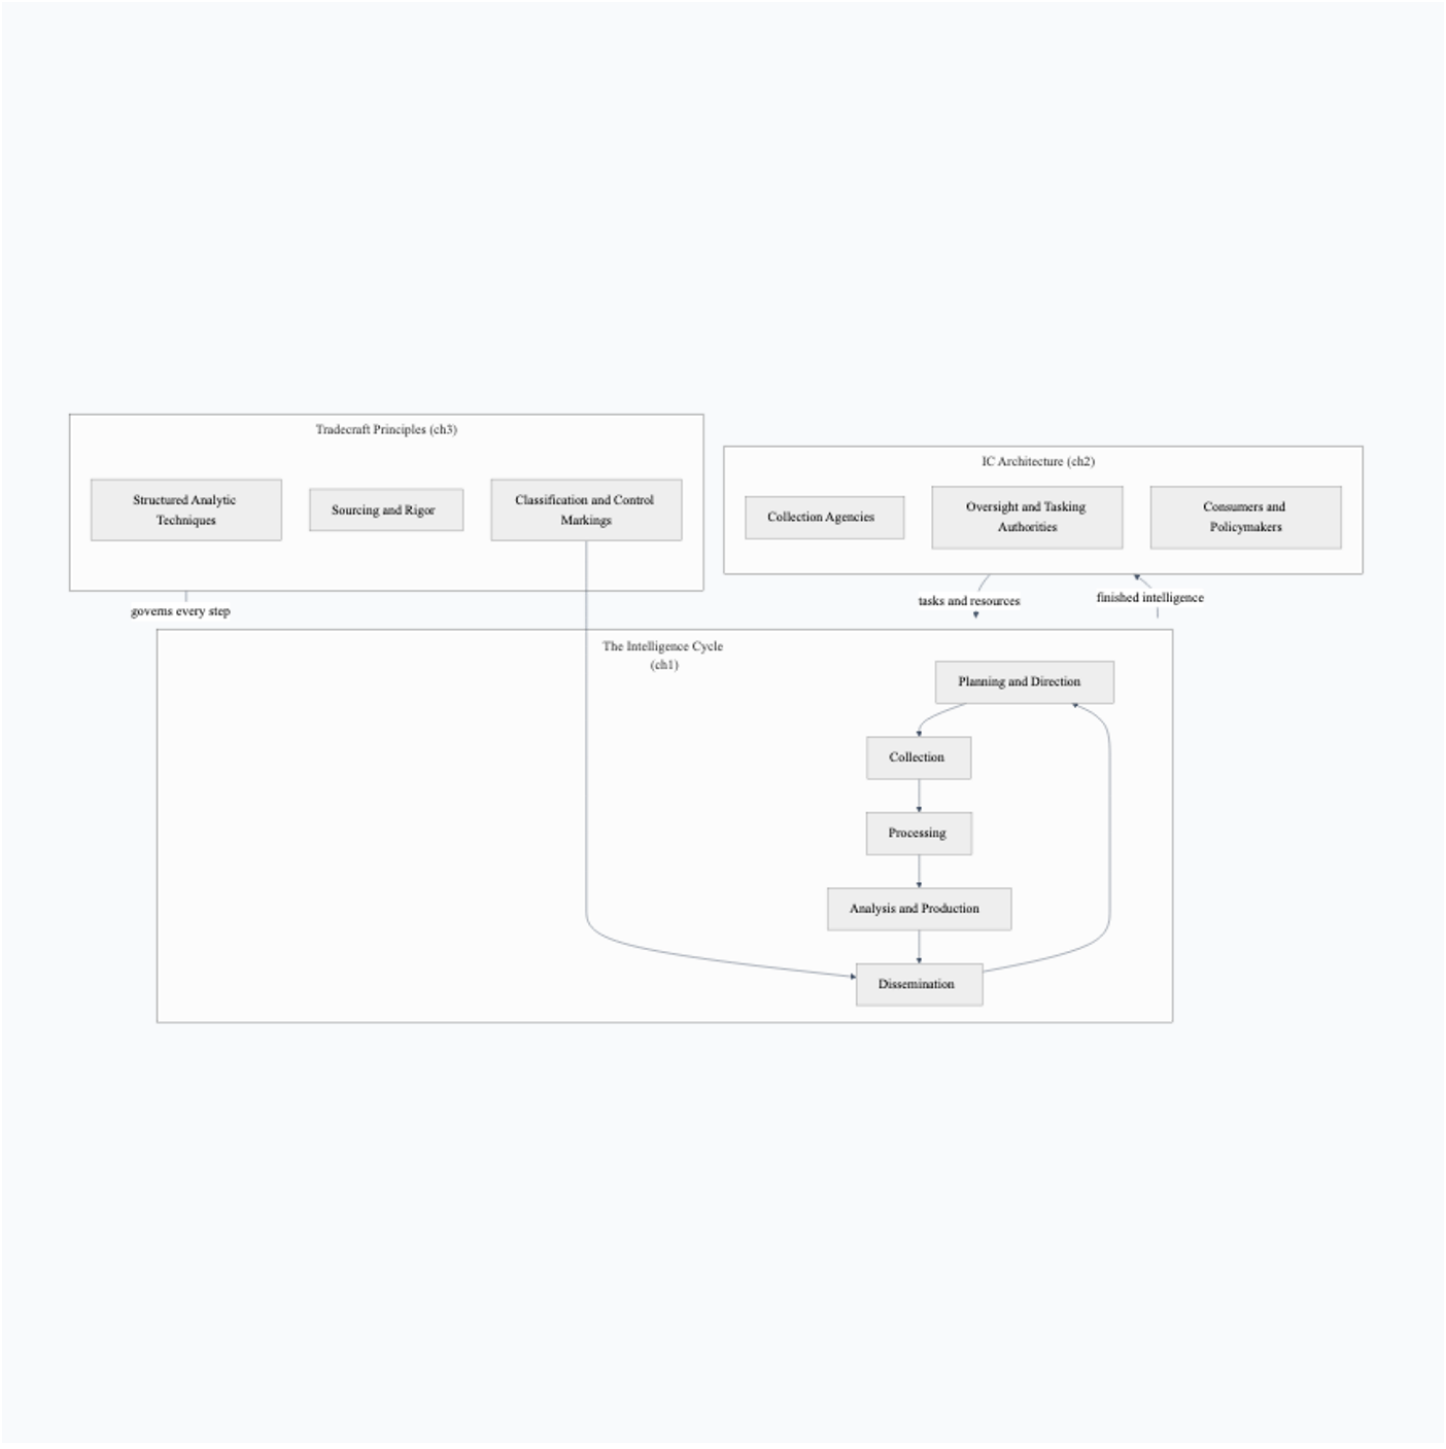

Figure 31: Part I frames intelligence as a cyclic process (ch1) driven by community architecture (ch2) and disciplined at every step by tradecraft principles and control markings (ch3). Its reader value is to make The Intelligence Cycle (ch1), Planning and Direction, Collection, and Processing visible at a glance, with the foundations of intelligence tradecraft section as the source section and defensive review as the boundary.

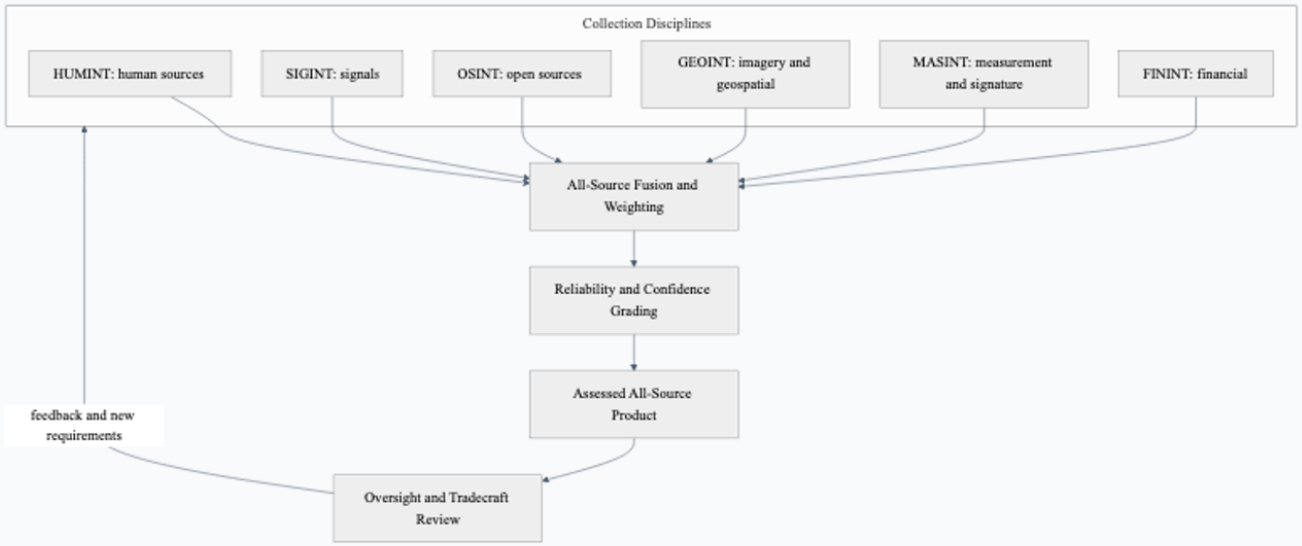

Figure 32: The intelligence disciplines each contribute distinct evidence that all-source analysis fuses, weights by reliability, and turns into an assessed product under oversight. In the foundations of intelligence tradecraft section, it lets readers compare Collection Disciplines, HUMINT: human sources, SIGINT: signals, and OSINT: open sources so the visual functions as a traceable course aid rather than an unscoped assertion.

5 The Nature of Intelligence

5.0.1 The Nature of Intelligence figures and course links: visual evidence, source flow, and navigation

The module uses Figure 33 and Figure 30 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 4, Section 6.
This module teaches the **Governed Intelligence Cycle and Dissemination Architecture** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint237].

5.1 Governed Intelligence Cycle and Dissemination Architecture frame for The Nature of Intelligence: source context, topic focus, and reader task

Navigation. Parent section: Section 5.

5.1.1 The Nature of Intelligence orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 5.

5.1.2 The Nature of Intelligence conceptual primer: source context, core model, and reader task

This chapter teaches intelligence as a governed information cycle: requirements become collection, collection becomes evaluated evidence, evidence becomes analytic judgment, and judgment becomes a disseminated product with markings, records, feedback, and oversight. The chapter uses **Dissemination-and-Marking Control Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.
The central distinction is to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. Core topics include **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits; Strategic, Operational, Tactical Uses and Technical Specialties**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint237].
Learners move from vocabulary and the **Dissemination-and-Marking Control Lens** distinction through topic lessons on **Information, Reporting, Finished Judgment, and Decision Support** with evidence and misconception checks, then assemble a **dissemination map with audience, caveat, marking, records, and feedback fields** with safety and rights gates.

5.1.3 The Nature of Intelligence learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 5.

- Connect **Information, Reporting, Finished Judgment, and Decision Support and The Intelligence Cycle: Iteration, Feedback, and Limits** to **Governed Intelligence Cycle and Dissemination Architecture** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **dissemination map with audience, caveat, marking, records, and feedback fields** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as cycle theater, undocumented dissemination, classification drift, unclear release authority, stale records assumptions, and feedback loops that hide bias, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: cycle and marking material remains public-source and educational; it never handles classified content, live release decisions, or source-method exposure.

5.1.4 The Nature of Intelligence core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 5.

Term	Working definition
Requirement	the decision need or learning question that justifies evidence collection
Dissemination	the controlled movement of an intelligence product to an authorized audience
Marking	the vocabulary that communicates handling, caveat, and release limits
Feedback loop	the customer or reviewer signal that tests whether the product answered the need
Records duty	the retention, deletion, or refresh obligation attached to an artifact
Decision hygiene	habits that keep requirements, evidence, and reviewer judgment aligned under load
Information architecture	how sources, notes, and products are organized so uncertainty stays visible

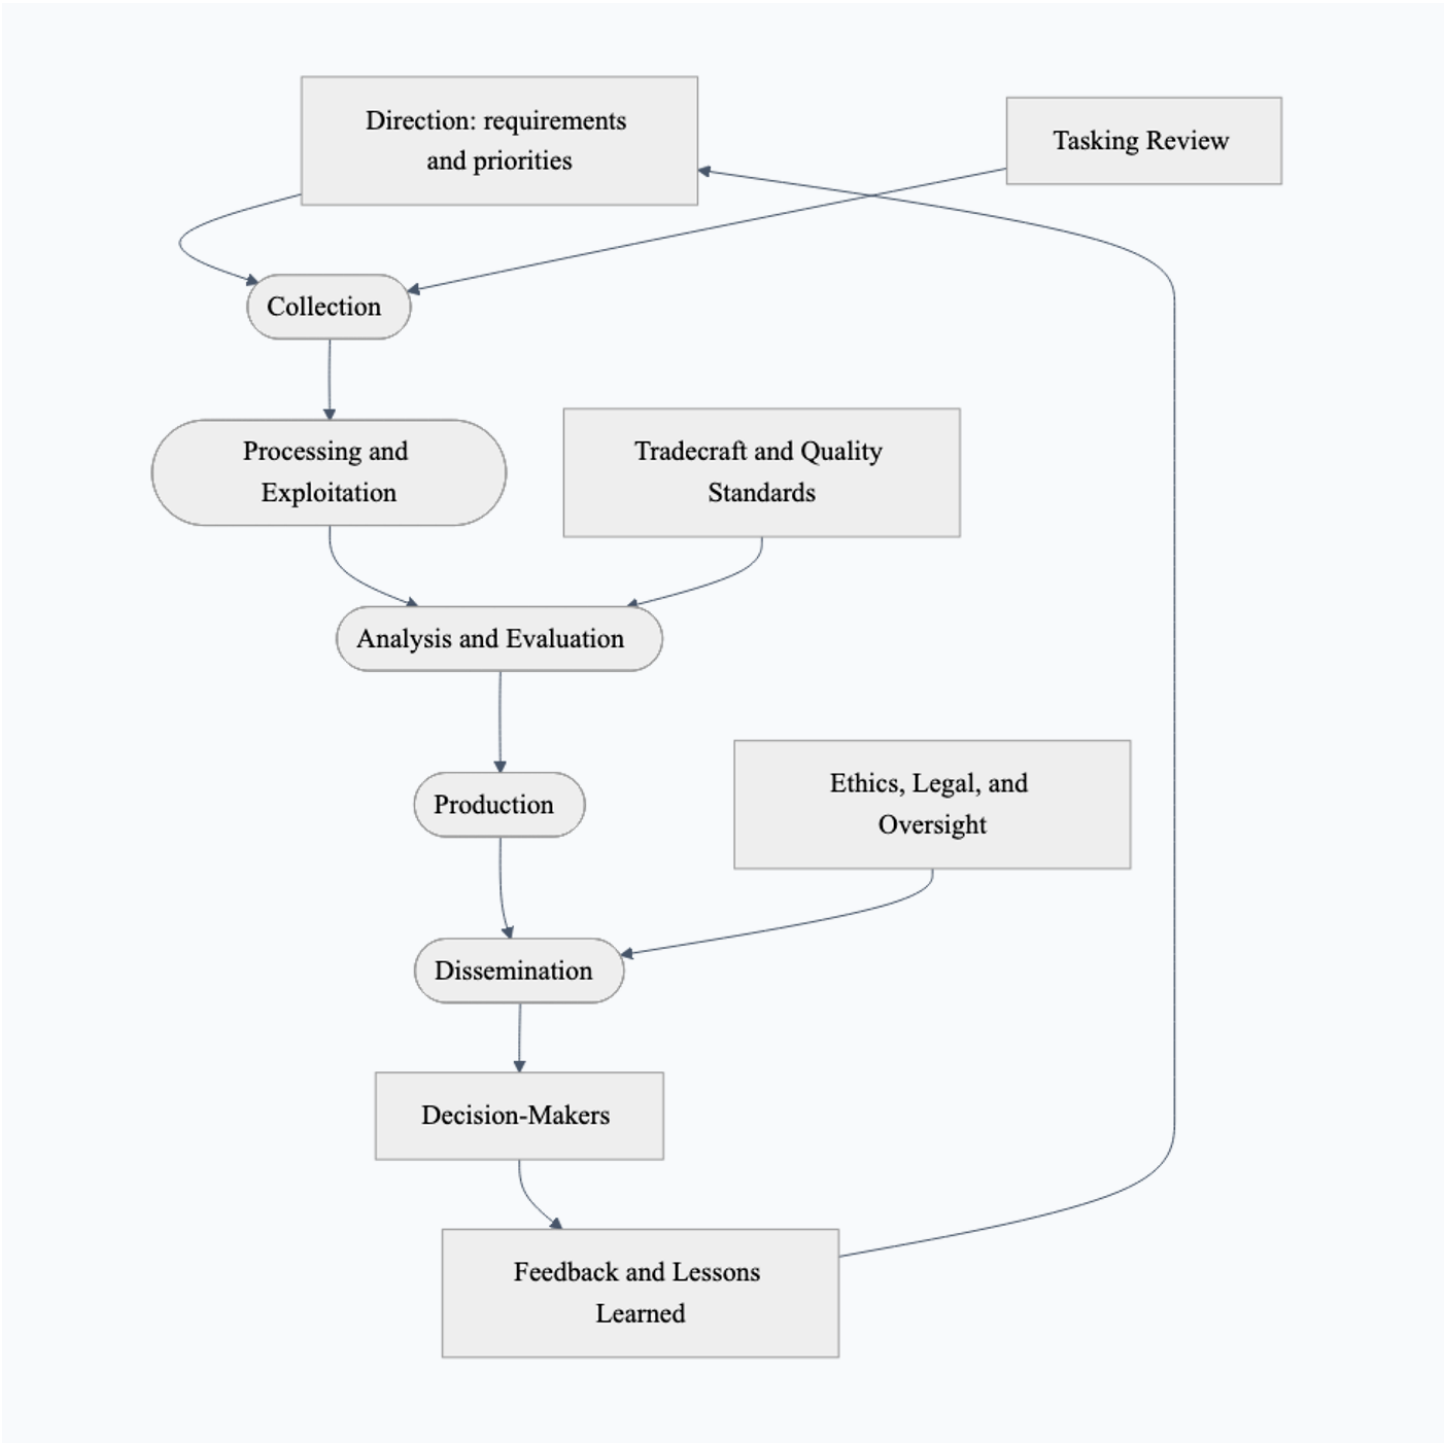

Figure 33: This diagram teaches the classic intelligence cycle as a governed, feedback-driven loop where each phase passes through review before products reach decision-makers. Its reader value is to make Direction: requirements and priorities, Decision-Makers, Feedback and Lessons Learned, and Tasking Review visible at a glance, with the foundations of intelligence tradecraft / the nature of intelligence section as the source section and defensive review as the boundary.

5.2 Dissemination-and-Marking Control Lens path for The Nature of Intelligence: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 5.

5.2.1 The Nature of Intelligence practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 5.

5.2.2 The Nature of Intelligence topic lessons: source-backed concepts and transfer tasks

The Nature of Intelligence builds intelligence as a governed information cycle: requirements become collection, collection becomes evaluated evidence, evidence becomes analytic judgment, and judgment becomes a disseminated product with markings, records, feedback, and oversight. The sequence opens with **Information, Reporting, Finished Judgment, and Decision Support**, **The Intelligence Cycle: Iteration, Feedback, and Limits**, **Strategic, Operational, Tactical Uses and Technical Specialties** and applies the **Dissemination-and-Marking Control Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 30; module overview Section 5; curriculum atlas Section 2.

Contextual source routes. For module 1's topic-lessons section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

5.2.2.1 Lesson 1: Information, Reporting, Finished Judgment, and Decision Support **Concept. Information, Reporting, Finished Judgment, and Decision Support** applies structured analytic methods with explicit alternatives, evidence tables, and calibrated confidence—not rhetorical certainty.

Worked reasoning and limits. Information is recorded content; reporting communicates observations or claims; analysis evaluates their basis and implications; finished intelligence presents bounded judgments to a decision-maker, who remains responsible for action. **Completed synthetic case:** bulletin B1 at 08:00 forecasts severe rain; fictional depot log L1 at 08:10 records water at one entrance. The evaluated observation is one affected entrance, not a closed depot; the assessment is that access may be disrupted, with low confidence about duration, and the product asks the logistics decision-owner to review available alternatives rather than announcing closure. At 08:30 correction L2 says the water was from a pipe: preserve L1, withdraw the storm-causation inference, and stop reusing the superseded brief; this exercises Section 3.6, not a measured forecast method. The inherited STIX/TAXII/ATLAS citations are interoperability context, not evidence for these definitions; the official IC explanation supports the raw/finished distinction [United States Intelligence Community, 2026].

Why it matters. Analysts use **Information, Reporting, Finished Judgment, and Decision Support** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that collapsing reporting, inference, and judgment into one line would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Information, Reporting, Finished Judgment, and Decision Support**: [ageint309], [ageint310], and [ageint300]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Information, Reporting, Finished Judgment, and Decision Support**, inspect the original passages. Curriculum annotation for [ageint309]: An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection. Curriculum annotation for [ageint310]: The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Information, Reporting, Finished Judgment, and Decision Support**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Information Reporting Finished Judgment and**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape the same topic work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Information, Reporting, Finished Judgment, and Decision Support**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Apply this module's safe boundary for **Information, Reporting, Finished Judgment, and Decision Support** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

5.2.2.2 Lesson 2: The Intelligence Cycle: Iteration, Feedback, and Limits **Concept. The Intelligence Cycle: Iteration, Feedback, and Limits** traces requirements through collection, processing, analysis, dissemination, and feedback while naming authority and audience at each transition.

Worked reasoning and limits. The official six-stage account names planning, collection, processing, analysis, dissemination, and evaluation, but explicitly makes evaluation ongoing rather than a final quality stamp [United States Intelligence Community, 2026]. A new question can emerge during analysis, and a correction can require withdrawal after dissemination; arrows therefore represent dependencies and feedback, not a universal sequence or permission to collect. Diagnostic question: does an unfilled requirement authorize new collection? No: it records an evidence gap; purpose, applicable authority, and an accountable decision are separate prerequisites. ICD analytic standards support reasoning duties, not the empirical superiority of a particular cycle diagram.

Why it matters. The Intelligence Cycle connects classroom vocabulary to Governed Intelligence Cycle and Dissemination Architecture practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **The Intelligence Cycle: Iteration, Feedback, and Limits**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **The Intelligence Cycle**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source

material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **The Intelligence Cycle**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Intelligence Cycle**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape **The Intelligence Cycle** work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **The Intelligence Cycle**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Apply this module's safe boundary for **The Intelligence Cycle** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

5.2.2.3 Lesson 3: Strategic, Operational, Tactical Uses and Technical Specialties

Concept. Strategic, Operational, Tactical Uses and Technical Specialties applies structured analytic methods with explicit alternatives, evidence tables, and calibrated confidence—not rhetorical certainty.

Worked reasoning and limits. Strategic, operational, and tactical describe decision scope, planning horizon, and intended use, not fixed file formats or guaranteed time intervals. The same synthetic depot observation could inform long-term resilience investment, next-week distribution planning, or today's access decision; each product needs different uncertainty and timeliness statements. Technical intelligence describes subject matter or specialized analysis and can support all three levels, so it is not simply a mutually exclusive fourth rung. Inherited threat-sharing standards do not define these planning levels; use doctrine as bounded terminology rather than as proof that one level is more reliable [Joint Chiefs of Staff, 2026].

Why it matters. Strategic, Operational, Tactical Uses and Technical Specialties matters in the **Governed Intelligence Cycle and Dissemination Architecture** lane because cycle mapping and audience-aware product design evidence must stay separate from judgment; collapsing reporting, inference, and judgment into one line is a common failure.

Source support. Inherited source-guide context for **Strategic, Operational, Tactical Uses and Technical Specialties**: [ageint309], [ageint310], and [ageint300]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Strategic, Operational, Tactical Uses and Technical Specialties**, inspect the original passages. Curriculum annotation for [ageint309]: An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection. Curriculum annotation for [ageint310]: The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Strategic, Operational, Tactical Uses and Technical Specialties**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Strategic Operational Tactical Uses and**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape the same topic work as a **requirements-to-product traceability ledger** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Strategic, Operational, Tactical Uses and Technical Specialties**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Apply this module's safe boundary for **Strategic, Operational, Tactical Uses and Technical Specialties** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

5.2.2.4 Lesson 4: Intelligence as Social and Epistemological Practice

Concept. Intelligence as Social and Epistemological Practice applies structured analytic methods with explicit alternatives, evidence tables, and calibrated confidence—not rhetorical certainty.

Worked reasoning and limits. An epistemic judgment asks what is warranted by evidence; a social practice also asks whose reports are heard, how translation and institutional incentives shape them, and who can contest the conclusion. Agreement among analysts is not independent corroboration if everyone read the same bulletin. In the depot case, a manager's endorsement changes the institutional status of the brief but adds no observation about the entrance; the model answer keeps authority, evidence, and confidence separate. The inherited philosophical account supplies a perspective, not a tested algorithm for eliminating bias.

Why it matters. Intelligence as Social and Epistemological Practice connects classroom vocabulary to Governed Intelligence Cycle and Dissemination Architecture practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Intelligence as Social and Epistemological Practice uses curated analytic-tradecraft anchors [Office of the Director of National Intelligence, 2015]; [Central Intelligence Agency, 2009]; [Central Intelligence Agency Center for the Study of Intelligence, 2002]; [Cooper, 2005]; [Johnston, 2005]; [National Commission on Terrorist Attacks Upon the United States, 2004]; [Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction, 2005]; [United States Senate Select Committee on Intelligence, 2004]; [Artner et al., 2016]; [Coulthart, 2017]; [Chang et al., 2018]; [Dhami et al., 2019]; [Whitesmith, 2019]; [Karvetski and Mandel, 2020]; [Wilcox and Mandel, 2024]; [Barnes and Mandel, 2014]; [Dhami et al., 2015]; [Intelligence Advanced Research Projects Activity, 2010]; [Intelligence Advanced Research Projects Activity, 2023]; [McMahon, 2024]. The inherited guide citation(s) [ageint001] remain context only; primary support must keep likelihood, confidence, assumptions, alternatives, dissent, source quality, ACH limits, and refresh duty separate. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Intelligence as Social and Epistemological Practice**, use the curated analytic-tradecraft anchors [Office of the Director of National Intelligence, 2015]; [Central Intelligence Agency, 2009]; [Central Intelligence Agency Center for the Study of Intelligence, 2002]; [Cooper, 2005]; [Johnston, 2005]; [National Commission on Terrorist Attacks Upon the United States, 2004]; [Commission on the Intelligence Capabilities of the United States Regarding Weapons of Mass Destruction, 2005]; [United States Senate Select Committee on Intelligence, 2004]; [Artner et al., 2016]; [Coulthart, 2017]; [Chang et al., 2018]; [Dhami et al., 2019]; [Whitesmith, 2019]; [Karvetski and Mandel, 2020]; [Wilcox and Mandel, 2024]; [Barnes and Mandel, 2014]; [Dhami et al., 2015]; [Intelligence Advanced Research Projects Activity, 2010]; [Intelligence Advanced Research Projects Activity, 2023]; [McMahon, 2024]. Pull observation, inference, assumption, likelihood, confidence, dissent, decision-uptake boundary, postmortem learning, and the empirical limit that would force a weaker claim. Treat SATs as reviewable reasoning artifacts, not validated universal debiasing or autonomous judgment replacements.

Student artifact. For **Intelligence as Social and Epistemological Practice**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Intelligence as Social and Epistemological**, the analytic caveat, the confidence note, the excluded-inference boundary,

and the reviewer who logs dissent. Shape the same topic work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Intelligence as Social and Epistemological Practice**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Apply this module's safe boundary for **Intelligence as Social and Epistemological Practice** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

5.2.2.5 Lesson 5: National, Corporate, and Private Intelligence: Purpose and Authority Concept. National, Corporate, and Private Intelligence: Purpose and Authority applies structured analytic methods with explicit alternatives, evidence tables, and calibrated confidence—not rhetorical certainty.

Worked reasoning and limits. Compare purpose, audience, data-access basis, and accountability separately: national work serves public mandates and institution-specific oversight; corporate analysis supports organizational decisions; private research serves an agreed client purpose. Those descriptions do not transfer state powers, restricted access, secrecy privileges, or surveillance authority to a company, contractor, or student. Public availability is not blanket permission for profiling or reuse, and a contract or consent does not remove other legal duties. For a supplied fictional market report, contractual permission to read the report supports that classroom use only; uncertainty about reuse of underlying personal records requires a hold, not an inference of government-like authority.

Why it matters. Analysts use **National, Corporate, and Private Intelligence** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that collapsing reporting, inference, and judgment into one line would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **National, Corporate, and Private Intelligence: Purpose and Authority**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **National, Corporate, and Private Intelligence**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **National, Corporate, and Private Intelligence**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **National Corporate and Private Intelligence**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape **National, Corporate, and Private Intelligence** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **National, Corporate, and Private Intelligence**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Apply this module's safe boundary for **National, Corporate, and Private Intelligence** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

5.2.2.6 Lesson 6: Law, Executive Instruments, Analytic Standards, and Ethics Concept. Law, Executive Instruments, Analytic Standards, and Ethics applies structured analytic methods with explicit alternatives, evidence tables, and calibrated confidence—not rhetorical certainty.

Worked reasoning and limits. These are different instrument types: FISA is a U.S. statutory framework; EO 12333 is an executive instrument; ICD 203 sets analytic standards; an ethical recommendation concerns justified conduct and can demand restraint beyond a legal minimum. None is a universal allied-law code, and analytic objectivity or classroom approval creates no collection authority. Record jurisdiction, instrument version/date, applicable activity, responsible approver, and unresolved scope before drawing a legal conclusion; older DCI-era EO text must be labeled historical rather than treated as a current consolidated instrument. With no applicable dated authority supplied, the correct classroom disposition is no new collection and referral to qualified review, not a claim that the named laws either permit or forbid every case.

Why it matters. Law, Executive Instruments, Analytic Standards, and Ethics matters in the **Governed Intelligence Cycle and Dissemination Architecture** lane because cycle mapping and audience-aware product design evidence must stay separate from judgment; collapsing reporting, inference, and judgment into one line is a common failure.

Source support. Inherited source-guide context for **Law, Executive Instruments, Analytic Standards, and Ethics**: [ageint002]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Law, Executive Instruments, Analytic Standards, and Ethics**, inspect the original passages. No displayable curriculum annotation is available for [ageint002]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Law, Executive Instruments, Analytic Standards, and Ethics**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Law Executive Instruments Analytic Standards**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape the same topic work as a **requirements-to-product traceability ledger** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Law, Executive Instruments, Analytic Standards, and Ethics**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Transfer **Law, Executive Instruments, Analytic Standards, and Ethics** from this module to a second motif by preserving cycle mapping and audience-aware product design, replacing action with audit, and naming the blocked use.

5.2.2.7 Lesson 7: Active Inference as a Proposed Modeling Perspective Concept. Active Inference as a Proposed Modeling Perspective treats active inference as an agent-modeling vocabulary: beliefs, actions, expected observations, and policy selection are classroom concepts, not proof that an intelligence agent should act autonomously.

Worked reasoning and limits. Active inference is presented here as a theoretical modeling perspective and a limited analyst-update analogy, not an established unifying method or evidence of intelligence effectiveness. The cited organizational application distinguishes repetitive work from the harder one-of-a-kind project setting; that boundary matters when observations do not recur under a stable model [ageint003]. In the depot example, revising a storm explanation after the pipe correction illustrates belief revision, but supplies neither a fitted generative model nor evidence that free-energy optimization improved the judgment. A classroom analogy must stop where its assumptions about recurrence, observations, or model adequacy fail.

Why it matters. Active Inference matters in the **Governed Intelligence Cycle and Dissemination Architecture** lane because cycle mapping and audience-aware product design evidence must stay separate from judgment; collapsing reporting, inference, and judgment into one line is a common failure.

Source support. Inherited source-guide context for **Active Inference as a Proposed Modeling Perspective**: [ageint003]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Active Inference**, inspect the original passages. Curriculum annotation for [ageint003]: A 2021 peer-reviewed article by Stephen Fox in the journal Entropy that relates the active inference framework to social organization. It maps concepts such as variational free energy, prediction error, generative models, and Markov blankets onto industrial engineering and quality management practices, treating organizational survival as the maintenance of process control limits. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Active Inference**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **Active Inference as a Proposed**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape **Active Inference** work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Active Inference**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. For **Active Inference**, transfer the idea to a non-AI chapter by naming the assumed model, the surprising observation, and the review point before any decision follows.

5.2.2.8 Lesson 8: AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps Concept. AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps traces requirements through collection, processing, analysis, dissemination, and feedback while naming authority and audience at each transition.

Worked reasoning and limits. AI may assist translation, triage, retrieval, and drafting, but a proposed use is not a measured improvement in accuracy, timeliness, cost, or rights protection. Translation can erase qualifiers, retrieval can multiply one source into apparent corroboration, and fluent drafting can conceal an unsupported implication. The inherited podcast and commentary support attributed forecasts, not the universal premise that every phase is already transformed; related summaries of the same professional essay are not independent evidence. A defensible comparison would need a specified task, baseline, error analysis, and consequential limitations; absent those, retain the forecast as untested and keep the accountable analyst's decision separate.

Why it matters. AI and the Intelligence Cycle connects classroom vocabulary to Governed Intelligence Cycle and Dissemination Architecture practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps**: [ageint004] and [ageint005]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **AI and the Intelligence Cycle**, inspect the original passages. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. Curriculum annotation for [ageint005]: A blog post on SemperVerus summarizing a CIA Studies in Intelligence article, "Espionage in Our AI Future: Why Human Intelligence Still Matters" (Vol. 70, No. 1, March 2026). It argues that as AI makes technical intelligence cheaper and AI-driven fabrication more pervasive, human intelligence becomes relatively more valuable, since human specialists are needed to verify source reliability over time. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI and the Intelligence Cycle**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this cycle mapping and audience-aware product design topic. The artifact must separate the source descriptor, the bounded judgment about **AI and the Intelligence Cycle**, the analytic caveat, the confidence note, the excluded-inference boundary, and the reviewer who logs dissent. Shape **AI and the Intelligence Cycle** work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **AI and the Intelligence Cycle**: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

Transfer task. Transfer **AI and the Intelligence Cycle** from this module to a second motif by preserving cycle mapping and audience-aware product design, replacing action with audit, and naming the blocked use.

5.2.3 The Nature of Intelligence worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic analyst team rebuilds a storm-impact brief after discovering a stale requirement and overloaded reading queue. [ageint238]; [ageint237].

Contextual source routes. For module 1's worked-example section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **intelligence-cycle governance**. Learners use a **requirements-to-product traceability ledger** and keep this boundary visible: Activities stay inside public, synthetic, or instructor-provided materials and never become live collection or tasking.

Frame. The classroom question centers on **Information, Reporting, Finished Judgment, and Decision Support**. Excluded actions stay explicit, and the **Dissemination-and-Marking Control Lens** planning question is: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?

Inputs. For the **Information, Reporting, Finished Judgment, and Decision Support** scenario, use instructor-supplied fictional bulletin A forecasting tomorrow's storm, map B dated two years earlier, notice C cancelling today's buses, and a requirement card asking whether tomorrow's seminar should be postponed. The Dissemination-and-Marking Control Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Information, Reporting, Finished Judgment, and Decision Support**, students first fix the decision, horizon, customer, and deadline; then log each item's date and scope, separate forecast from observation, and identify the missing tomorrow-service notice; finally restore C's date after a date-hidden comparison and reject any inference that today's cancellation proves tomorrow's status. Stop at the deadline and hand the unresolved service check to the instructor rather than extending collection. Pause whenever an inference about Information, Reporting, Finished

Judgment, and Decision Support appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a release-neutral brief stating that storm disruption is possible but tomorrow's bus status is unresolved, with limited evidentiary confidence, a source ledger, instructor review before circulation, and a feedback question about whether the decision need is answered Retain it as the **requirements-to-product traceability ledger** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Information, Reporting, Finished Judgment, and Decision Support** as "Dissemination-and-Marking Control Lens confirms it" is not enough. The revision ties the claim to cycle mapping and audience-aware product design, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Information, Reporting, Finished Judgment, and Decision Support** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

5.2.4 The Nature of Intelligence practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Dissemination-and-Marking Control Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

Contextual source routes. For module 1's practice-sequence section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Information, Reporting, Finished Judgment, and Decision Support, The Intelligence Cycle: Iteration, Feedback, and Limits, Strategic, Operational, Tactical Uses and Technical Specialties; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Governed Intelligence Cycle and Dissemination Architecture** lane.
2. Frame	Answer the lens question: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Information, Reporting, Finished Judgment, and Decision Support: dissemination map with audience, caveat, marking, records, and feedback fields.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the requirements-to-product traceability ledger fields for Information, Reporting, Finished Judgment, and Decision Support.	Unit profile note.	Evidence artifacts include requirement card, source descriptor.
4. Challenge	Test the misconception that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.	Failure-mode note.	The artifact applies the key distinction: separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

5.2.4.1 The Nature of Intelligence instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. [ageint238]; [ageint237].

5.2.4.2 The Nature of Intelligence extension exercise: peer validation and refresh trigger review Navigation.

Parent section: Section 5.

Have learners swap artifacts and apply the **Dissemination-and-Marking Control Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.2.5 The Nature of Intelligence knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 5.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Information, Reporting, Finished Judgment, and Decision Support**.
2. Transfer the **Dissemination-and-Marking Control Lens** artifact from **Information, Reporting, Finished Judgment, and Decision Support** to the final topic, **AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Governed Intelligence Cycle and Dissemination Architecture** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which requirement, source, or workflow step failed first when the team ran out of review time?
5. Correct this misconception: that a confident narrative is the same as a tested, source-backed judgment with its alternatives and confidence stated.

5.2.5.1 The Nature of Intelligence answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Information, Reporting, Finished Judgment, and Decision Support** without source evidence, uncertainty, or a safe transfer task.

5.3 The Nature of Intelligence assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 5.

5.3.1 The Nature of Intelligence evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 5.

5.3.2 The Nature of Intelligence transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 5.

5.3.2.1 The Nature of Intelligence lineage and source tradition: profile, concepts, and first anchors This sits in the **Governed Intelligence Cycle and Dissemination Architecture** lineage: treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit. [ageint238]; [ageint237].

5.3.2.2 The Nature of Intelligence working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 5.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**, with provenance and reviewability throughout.

5.3.2.3 The Nature of Intelligence knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** requirements, audience needs, public-source evidence, caveats, and feedback signals. [ageint238]; [ageint237].
- **Transforms:** requirement framing, collection scoping, source evaluation, analytic judgment, dissemination, and feedback review.
- **Outputs:** release-neutral brief, audience map, caveat register, and feedback note.
- **Failure modes:** unscoped audiences, missing caveats, weak records, and product reuse without feedback.

5.3.2.4 The Nature of Intelligence transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 5.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.
- **Evidence contract:** keep the **Governed Intelligence Cycle and Dissemination Architecture** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as release-neutral brief, audience map, caveat register, and feedback note that another reviewer can audit.

5.3.2.5 The Nature of Intelligence profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 5.

The matched profile emphasizes treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit. The method stack is cycle mapping, priority-to-product traceability, data-lifecycle mapping, classification vocabulary review, dissemination-caveat audit, customer feedback, and oversight checkpointing; the local topic cluster is **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.3 The Nature of Intelligence evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 5.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Governed Intelligence Cycle and Dissemination Architecture** profile tells reviewers what evidence is strong enough for the module artifact built around **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.3.1 The Nature of Intelligence guide source spine: inherited keys and local citation roles Primary guide citations: [ageint238]; [ageint237]; [ageint270]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint001]; [ageint002]; [ageint003]; [ageint004]; [ageint005]; [ageint297]; [ageint298]; [ageint309]; [ageint310]; [ageint300].

5.3.3.2 The Nature of Intelligence verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint238]; [ageint237].

Tier	What counts	How it is used
Source guide	[ageint238]; [ageint237]; [ageint270]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint001]; [ageint002]; [ageint003]; [ageint004]; [ageint005]; [ageint297]; [ageint298]; [ageint309]; [ageint310]; [ageint300].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 1's source-canon section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits** and [ageint238]; [ageint237], but only directly verified source URLs are encoded as citations.

5.3.3.3 The Nature of Intelligence intelligence practice lens: evidence artifact and safety check Practice lens: **Dissemination-and-Marking Control Lens** for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. [ageint238]; [ageint237].

Planning question: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?

Evidence artifact: dissemination map with audience, caveat, marking, records, and feedback fields.

Validation rule: verify source authority, public/classification status, CAPCO-safe vocabulary, audience need, and records disposition before reuse. Applied to **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

Handoff contract: deliver release-neutral summaries, source metadata, marking rationale, and review ownership as separate fields.

Safety check: exclude classified content, live release decisions, source-method exposure, and improvised control markings.

5.3.3.4 The Nature of Intelligence runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 5.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	1.99	1.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind The Nature of Intelligence to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Bounded autonomy, procurement, incident-response, and assurance studio	1.101	1.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for The Nature of Intelligence	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Model-card, recoverability, retention, and learner-support evidence package	1.102	1.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for The Nature of Intelligence	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Information, Reporting, Finished Judgment, and Decision Support	1.1	1.1 Information, Reporting, Finished Judgment, and Decision Support	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
The Intelligence Cycle: Iteration, Feedback, and Limits	1.2	1.2 The Intelligence Cycle: Iteration, Feedback, and Limits	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Strategic, Operational, Tactical Uses and Technical Specialties	1.3	1.3 Strategic, Operational, Tactical Uses and Technical Specialties	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Intelligence as Social and Epistemological Practice	1.4	1.4 Intelligence as Social and Epistemological Practice	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
National, Corporate, and Private Intelligence: Purpose and Authority	1.5	1.5 National, Corporate, and Private Intelligence: Purpose and Authority	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Law, Executive Instruments, Analytic Standards, and Ethics	1.6	1.6 Law, Executive Instruments, Analytic Standards, and Ethics	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Active Inference as a Proposed Modeling Perspective	1.7	1.7 Active Inference as a Proposed Modeling Perspective	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps	1.8	1.8 AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

5.3.3.5 The Nature of Intelligence reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 5.

Lesson topic	Practice lens	Evidence artifact	Safety check
Information, Reporting, Finished Judgment, and Decision Support	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
The Intelligence Cycle: Iteration, Feedback, and Limits	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Strategic, Operational, Tactical Uses and Technical Specialties	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Intelligence as Social and Epistemological Practice	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
National, Corporate, and Private Intelligence: Purpose and Authority	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Law, Executive Instruments, Analytic Standards, and Ethics	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

Lesson topic	Practice lens	Evidence artifact	Safety check
Active Inference as a Proposed Modeling Perspective	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

5.3.3.6 The Nature of Intelligence annotated source ledger: real titles and local contribution Each source cited by this **Governed Intelligence Cycle and Dissemination Architecture** module is paired below with its real title and a one-line note on what it contributes to **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

Source	Cited work	Curriculum annotation	Status
[ageint238]	Recommendation on the Ethics of Artificial Intelligence	The official UNESCO page for the Recommendation on the Ethics of Artificial Intelligence, the first global standard-setting instrument on AI ethics, adopted in 2021 and applicable to all 194 member states. It outlines four core values, including human rights protection and environmental flourishing, and ten guiding principles such as proportionality, privacy, transparency, and fairness.	verified source-guide; annotation metadata, not claim verification
[ageint237]	Artificial Intelligence: An Accountability Framework for Federal Agencies and Other Entities	Official GAO AI accountability framework.	original source-guide; annotation metadata, not claim verification
[ageint270]	NIST Big Data Interoperability Framework	NIST Special Publication 1500-1 (revised edition by Chang and Grady) establishes foundational terminology and consensus definitions for Big Data through the NIST Big Data Public Working Group. The volume defines Big Data characteristics, taxonomy, and a reference architecture assigning roles to Application Providers, Data Consumers, Data Providers, and System Orchestrators.	verified source-guide; annotation metadata, not claim verification
[ageint273]	WCAG 2 Overview	The W3C Web Accessibility Initiative overview of the Web Content Accessibility Guidelines (WCAG), an international standard for making web content accessible to people with disabilities. It explains that WCAG is organized around four principles (perceivable, operable, understandable, robust) with testable success criteria at three conformance levels (A, AA, AAA), and covers versions 2.0, 2.1, and 2.2.	verified source-guide; annotation metadata, not claim verification
[ageint274]	CAST Universal Design for Learning Guidelines version 3.0	The official CAST website for the Universal Design for Learning (UDL) Guidelines version 3.0, released in 2024. The framework offers research-based guidance for designing inclusive learning environments and is organized around three principles: Engagement (motivation and emotional support), Representation (accessible presentation of information), and Action and Expression (diverse means of participation and communication).	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint275]	Fact Sheet: New Rule on the Accessibility of Web Content and Mobile Apps Provided by State and Local Governments	A US Department of Justice fact sheet explaining the 2024 ADA Title II rule requiring state and local governments to make their web content and mobile apps accessible. It establishes WCAG 2.1 Level AA as the technical standard, applies to entities such as schools, courts, libraries, and transit agencies, and sets compliance deadlines of April 2027 for larger jurisdictions and April 2028 for smaller ones.	verified source-guide; annotation metadata, not claim verification
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification
[ageint287]	Datasheets for Datasets	A 2018 arXiv paper proposing 'datasheets for datasets,' a standardized documentation framework for machine learning datasets modeled on electronic component datasheets. The authors argue the field lacks consistent dataset documentation, which creates risk in high-stakes applications, and propose that datasets be accompanied by documentation covering motivation, composition, collection process, recommended uses, and test results.	verified source-guide; annotation metadata, not claim verification
[ageint292]	Assessing Risks and Impacts of AI (ARIA): Pilot Evaluation Report	The ARIA 0.1 pilot evaluation report documents NIST's methodology for systematically assessing AI applications for risks and societal impacts, using a multi-layered evaluation approach across five participating organizations and seven submitted AI applications. The pilot employed three evaluation scenarios and three testing levels: model testing, red teaming, and field testing, supplemented by dialogue annotation, tester questionnaires, and structured measurement trees.	verified source-guide; annotation metadata, not claim verification
[ageint001]	Epistemic Governance in the Context of Crisis	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint002]	Objectivity / Office of the Director of National Intelligence	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint003]	Active Inference: Applicability to Different Types of Social	A 2021 peer-reviewed article by Stephen Fox in the journal Entropy that relates the active inference framework to social organization. It maps concepts such as variational free energy, prediction error, generative models, and Markov blankets onto industrial engineering and quality management practices, treating organizational survival as the maintenance of process control limits.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint004]	AI Won't Replace Spies—It Will Make Them More Powerful Than Ever	Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools.	verified source-guide; annotation metadata, not claim verification
[ageint005]	CIA: Studies in AI and Human Intelligence - SemperVerus	A blog post on SemperVerus summarizing a CIA Studies in Intelligence article, "Espionage in Our AI Future: Why Human Intelligence Still Matters" (Vol. 70, No. 1, March 2026). It argues that as AI makes technical intelligence cheaper and AI-driven fabrication more pervasive, human intelligence becomes relatively more valuable, since human specialists are needed to verify source reliability over time.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint309]	STIX Version 2.1	An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection.	verified source-guide; annotation metadata, not claim verification
[ageint310]	TAXII Version 2.1	The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring.	verified source-guide; annotation metadata, not claim verification
[ageint300]	MITRE ATLAS	MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 5; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

5.3.4 The Nature of Intelligence governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 5.

5.3.5 The Nature of Intelligence analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 1's governance-boundary section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Governed Intelligence Cycle and Dissemination Architecture** for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. [ageint238]; [ageint237].

Curriculum topic spine: Information, Reporting, Finished Judgment, and Decision Support, **The Intelligence Cycle: Iteration, Feedback, and Limits**, **Strategic, Operational, Tactical Uses and Technical Specialties**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]; [Office of the Director of National Intelligence, 2026b]; [General Services Administration, Office of Management and Budget, and CDO Council, 2026]; [Privacy and Civil Liberties Oversight Board, 2026].

Conceptual depth: treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit.

Method stack: cycle mapping, priority-to-product traceability, data-lifecycle mapping, classification vocabulary review, dissemination-caveat audit, customer feedback, and oversight checkpointing.

Composability contract: requirements, data provenance, analytic judgments, markings, dissemination permissions, records obligations, and feedback remain separable artifacts.

Known failure modes: cycle theater, undocumented dissemination, classification drift, unclear release authority, stale records assumptions, and feedback loops that hide bias.

Defensive boundary: cycle and marking material remains public-source and educational; it never handles classified content, live release decisions, or source-method exposure. Applied to **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2025a]	Official IC data-management directive for data governance, data stewardship, CDO authority, interoperability, and data lifecycle management. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026b]	Official CAPCO register for classification and control-marking vocabulary, abbreviations, portion markings, and dissemination syntax. Checked as of 2026-05-21; role: curriculum_anchor.
[General Services Administration, Office of Management and Budget, and CDO Council, 2026]	Official federal data-governance benchmark for data as a strategic asset, ethical governance, lifecycle practices, and learning culture. Checked as of 2026-05-21; role: curriculum_anchor.
[Privacy and Civil Liberties Oversight Board, 2026]	Official oversight-report library for privacy, civil-liberties, surveillance, watchlisting, facial-recognition, and redress analysis. Checked as of 2026-05-21; role: curriculum_anchor.

5.3.5.1 The Nature of Intelligence evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Governed Intelligence Cycle and Dissemination Architecture** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint238]; [ageint237].

5.3.6 The Nature of Intelligence agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 5.

AGEINT translation is bounded by the **Governed Intelligence Cycle and Dissemination Architecture** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.6.1 The Nature of Intelligence permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 5.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.6.2 The Nature of Intelligence excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint238]; [ageint237] and **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

5.3.7 The Nature of Intelligence governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 5.

Governance is practiced as a gate on the **Governed Intelligence Cycle and Dissemination Architecture** lane. Learners use the **Dissemination-and-Marking Control Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.7.1 The Nature of Intelligence governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint238]; [ageint237].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Governed Intelligence Cycle and Dissemination Architecture** failure modes and the **Dissemination-and-Marking Control Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

5.3.7.2 The Nature of Intelligence evidence package handoff: appendices, records, and reuse

Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Dissemination-and-Marking Control Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.7.3 The Nature of Intelligence current-source assurance: verified anchors and local artifact fit

The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. [ageint238]; [ageint237].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_203` for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**?	Intelligence Community Directive 203: Analytic Standards; lane `source_quality_spine`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; source-quality triangulation and claim-boundary review
What does the module inherit from `official_odni_icd_204` for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_odni_icd_504` for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**?	Intelligence Community Directive 504: Intelligence Community Data Management; lane `ai_ethics_data_governance`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official IC data-management directive for data governance, data stewardship, CDO authority, interoperability, and data lifecycle management.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 5; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

5.3.8 The Nature of Intelligence assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 5.

5.3.9 The Nature of Intelligence assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 5.

5.3.9.1 The Nature of Intelligence capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits** and [ageint238]; [ageint237].

5.3.9.2 The Nature of Intelligence instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits** and [ageint238]; [ageint237].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

5.3.9.3 The Nature of Intelligence assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Information, Reporting, Finished Judgment, and Decision Support; **The Intelligence Cycle: Iteration, Feedback, and Limits**; **Strategic, Operational, Tactical Uses and Technical Specialties** **Intelligence as Social and Epistemological Practice**; **National, Corporate, and Private Intelligence: Purpose and Authority**; **Law, Executive Instruments, Analytic Standards, and Ethics** **Active Inference as a Proposed Modeling Perspective**; **AI and the Intelligence Cycle: Proposed Changes and Evidence Gaps**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: verify source authority, public/classification status, CAPCO-safe vocabulary, audience need, and records disposition before reuse. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude classified content, live release decisions, source-method exposure, and improvised control markings.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

5.3.10 The Nature of Intelligence refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint238]; [ageint237] and **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**.

5.3.10.1 The Nature of Intelligence refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. The local signals begin with [ageint238]; [ageint237].

5.3.10.2 The Nature of Intelligence claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**, and the source spine for these checks begins with [ageint238]; [ageint237].

5.3.11 The Nature of Intelligence reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint238]; [ageint237].

Contextual source routes. For module 1's review-checklist section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits**. [ageint238]; [ageint237].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.

- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

5.3.12 The Nature of Intelligence learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Information, Reporting, Finished Judgment, and Decision Support; The Intelligence Cycle: Iteration, Feedback, and Limits** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint238]; [ageint237].

Section 2, Section 4, Section 6

6 Intelligence Community Architectures

6.0.1 Intelligence Community Architectures figures and course links: visual evidence, source flow, and navigation

The module uses Figure 34 and Figure 30 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 4, Section 5, Section 7.
This module teaches the **Analytic Tradecraft and Source Integrity** lane through a bounded, source-backed coursebook chapter. [ageint234]; [ageint247].

6.1 Analytic Tradecraft and Source Integrity frame for Intelligence Community Architectures: source context, topic focus, and reader task

Navigation. Parent section: Section 6.

6.1.1 Intelligence Community Architectures orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 6.

6.1.2 Intelligence Community Architectures conceptual primer: source context, core model, and reader task

This chapter teaches analytic tradecraft as disciplined judgment under uncertainty: claims become useful only when evidence, assumptions, alternatives, confidence, and dissent remain visible. The chapter uses **Dissemination-and-Marking Control Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.
The central distinction is to separate reporting from inference, and inference from judgment. Core topics include **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits; British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint234]; [ageint247].
Learners move from vocabulary and the **Dissemination-and-Marking Control Lens** distinction through topic lessons on **U.S. Intelligence Community: Elements, Functions, and Responsibility** with evidence and misconception checks, then assemble a **dissemination map with audience, caveat, marking, records, and feedback fields** with safety and rights gates.

6.1.3 Intelligence Community Architectures learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 6.

- Connect **U.S. Intelligence Community: Elements, Functions, and Responsibility and Soviet and Russian Institutions: Historical Lineage and Comparison Limits** to **Analytic Tradecraft and Source Integrity** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **dissemination map with audience, caveat, marking, records, and feedback fields** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate reporting from inference, and inference from judgment; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as source laundering, automation bias, hidden assumptions, collapsed likelihood/confidence language, hindsight certainty, SAT-as-bias-cure overclaiming, and visually persuasive but weakly sourced claims, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: analysis remains educational and decision-supportive; it does not become tasking, targeting, covert collection, or policy advocacy.

6.1.4 Intelligence Community Architectures core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 6.

Term	Working definition
Source descriptor	a compact statement of where evidence came from and what it can support
Assumption	a claim accepted for analysis that still needs challenge
Alternative hypothesis	a plausible explanation that competes with the favored account
Confidence	an assessment of the evidence base and reasoning behind a judgment, distinct from the likelihood that an event will occur; calibration requires suitable repeated judgments and outcomes
Dissent	a documented disagreement that preserves minority reasoning for review

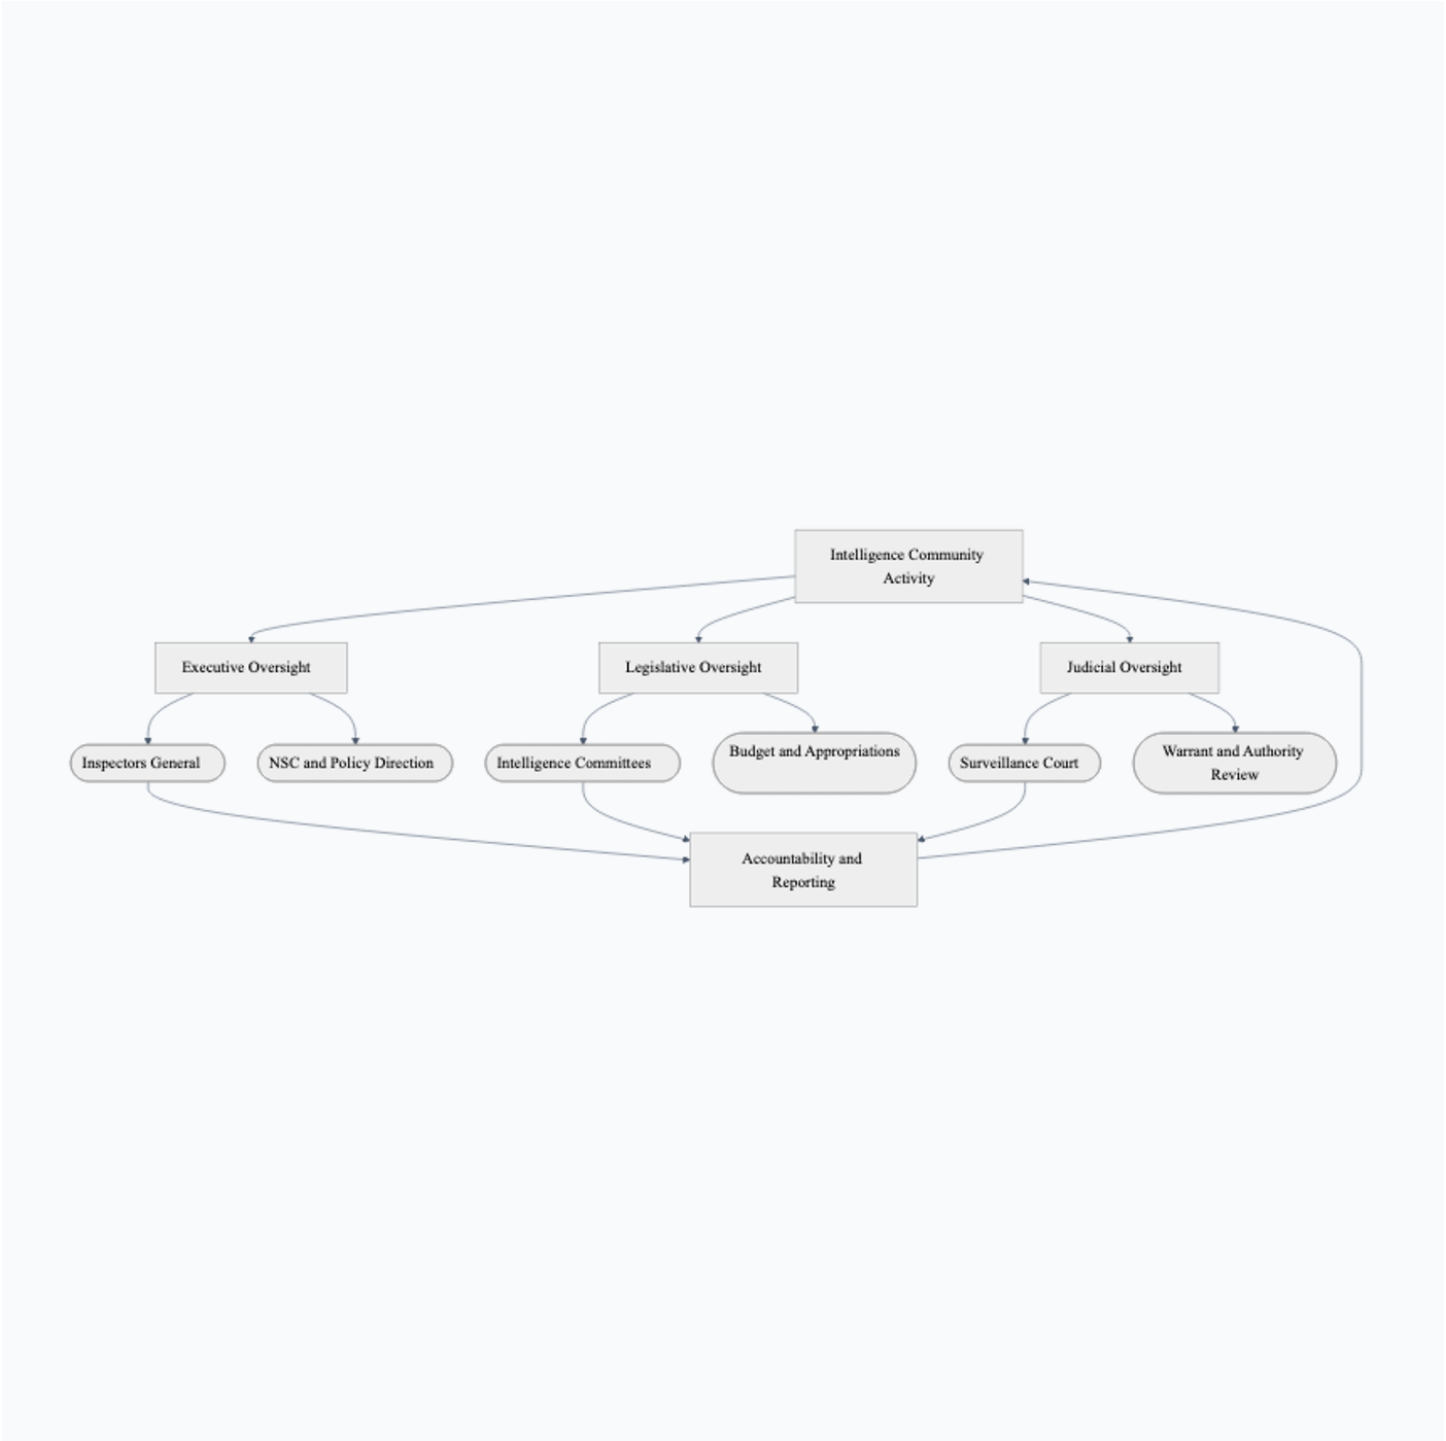

Figure 34: This diagram teaches how executive, legislative, and judicial oversight mechanisms jointly constrain and supervise intelligence community activity. It is anchored to the foundations of intelligence tradecraft / intelligence community architectures section; use it to inspect Intelligence Community Activity, Executive Oversight, Legislative Oversight, and Judicial Oversight while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

6.2 Dissemination-and-Marking Control Lens path for Intelligence Community Architectures: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 6.

6.2.1 Intelligence Community Architectures practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 6.

6.2.2 Intelligence Community Architectures topic lessons: source-backed concepts and transfer tasks

Intelligence Community Architectures builds analytic tradecraft as disciplined judgment under uncertainty: claims become useful only when evidence, assumptions, alternatives, confidence, and dissent remain visible. The sequence opens with **U.S. Intelligence Community: Elements, Functions, and Responsibility**, **Soviet and Russian Institutions: Historical Lineage and Comparison Limits**, **British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles** and applies the **Dissemination-and-Marking Control Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 30; module overview Section 6; curriculum atlas Section 2.

Contextual source routes. For module 2's topic-lessons section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

6.2.2.1 Lesson 1: U.S. Intelligence Community: Elements, Functions, and Responsibility

Concept. U.S. Intelligence Community: Elements, Functions, and Responsibility compares civilian, military, and technical components by mission, oversight chain, and product type rather than by organizational chart alone.

Worked reasoning and limits. The public IC overview inspected for this curriculum on 6 November 2026 lists 18 elements or organizations, not 18 interchangeable standalone agencies [United States Intelligence Community, 2026]. Distinguish ODNI coordination/integration, CIA foreign-intelligence work, NSA signals-intelligence responsibilities, and departmental or military elements serving their respective remits; this is a role orientation, not a complete or current authorization chart. **Completed synthetic handoff:** a supplied public weather bulletin and fictional port-status record go from an analyst to a coordinating review role, then to the logistics decision-owner; a release reviewer receives only the source/caveat summary needed to approve classroom distribution. When the status record's permission field is missing, the reviewer holds that record and releases only the independently permitted bulletin summary; the analyst must not treat coordination, collection, release, and policy decision as one power.

Why it matters. Analysts use **U.S. Intelligence Community** to separate reporting from inference, and inference from judgment. A defensible treatment names the judgment it enables for structured reasoning and source-integrity review, the proof limit that source laundering would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **U.S. Intelligence Community: Elements, Functions, and Responsibility**: [ageint006]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **U.S. Intelligence Community**, inspect the original passages. Curriculum annotation for [ageint006]: A Federation of American Scientists repository cataloguing the Intelligence Community Directives (ICDs) issued by the Director of National Intelligence. ICDs are the principal means by which the DNI provides policy, guidance, and direction to the U.S. Intelligence Community. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **U.S. Intelligence Community**, build an institutional feedback-loop map with incentives, review points, and oversight hooks. Shape **U.S. Intelligence Community** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that U.S. Intelligence Community: Elements, Functions, and Responsibility replaces human review whenever evidence looks plausible.

Transfer task. Transfer **U.S. Intelligence Community** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.2 Lesson 2: Soviet and Russian Institutions: Historical Lineage and Comparison Limits

Concept. Soviet and Russian Institutions: Historical Lineage and Comparison Limits is taught in the **Analytic Tradecraft and Source Integrity** lane. The analytic distinction is to separate reporting from inference, and inference from judgment. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The inherited arrow list is a historical prompt, not an accurate single chain of equivalent institutions or a certified current organization chart. Distinguish political-security institutions, foreign intelligence, domestic security, and military intelligence; do not present GRU military intelligence as simply another successor branch of the KGB. The supplied ICD citations concern U.S. analytic standards and do not establish Soviet/Russian institutional chronology, present remits, or accountability. A comparison card must date each named body and leave unsupported succession, oversight, and present authority cells unknown rather than infer them from a familiar acronym.

Why it matters. Soviet and Russian Institutions connects classroom vocabulary to Analytic Tradecraft and Source Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Soviet and Russian Institutions: Historical Lineage and Comparison Limits**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Soviet and Russian Institutions**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Soviet and Russian Institutions**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **Soviet and Russian Institutions**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Soviet and Russian Institutions** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Soviet and Russian Institutions: Historical Lineage and Comparison Limits can be used while ignoring the rule to separate reporting from inference, and inference from judgment.

Transfer task. Transfer **Soviet and Russian Institutions** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.3 Lesson 3: British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles

Concept. British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles is taught in the **Analytic Tradecraft and Source Integrity** lane. The analytic distinction is to separate reporting from inference, and inference from judgment. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The useful functional contrast is domestic security (MI5), foreign intelligence (SIS/MI6), signals/cyber work (GCHQ), defence intelligence (DI), and coordinated assessment (JIC); an assessment body is not interchangeable with a collection service. Treat these as introductory role labels whose precise legal remits and oversight arrangements require dated authoritative records. The inherited historical British source does not certify a 2026 reporting chain or current sharing permission. Diagnostic answer: a JIC-related assessment label alone does not show who collected the underlying information or who may release it; preserve those as separate provenance and authority questions.

Why it matters. British Intelligence connects classroom vocabulary to Analytic Tradecraft and Source Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles**: [ageint007]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **British Intelligence**, inspect the original passages. No displayable curriculum annotation is available for [ageint007]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **British Intelligence**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **British Intelligence**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **British Intelligence** work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles is optional whenever separate reporting from inference, and inference from judgment feels inconvenient.

Transfer task. Transfer **British Intelligence** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.4 Lesson 4: Israeli Institutions: Role Labels and Historical Scope

Concept. Israeli Institutions: Role Labels and Historical Scope is taught in the **Analytic Tradecraft and Source Integrity** lane. The analytic distinction is to separate reporting from inference, and inference from judgment. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Distinguish the introductory categories of foreign intelligence (Mossad), internal security (Shin Bet), and military signals intelligence (Unit 8200), without treating them as equivalent bodies or asserting a complete chain of authority. LAKAM belongs in explicitly historical discussion, not an undated list of assumed current institutions. The inherited Mossad overview does not support the entire Israeli architecture, detailed remits, or present oversight; those cells remain unverified pending dated primary records. A source discussing one organization cannot silently validate claims about all organizations named beside it.

Why it matters. Analysts use **Israeli Institutions** to separate reporting from inference, and inference from judgment. A defensible treatment names the judgment it enables for structured reasoning and source-integrity review, the proof limit that source laundering would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Israeli Institutions: Role Labels and Historical Scope**: [ageint008]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Israeli Institutions**, inspect the original passages. Curriculum annotation for [ageint008]: An EBSCO Research Starter reference article on the Mossad, Israel's national intelligence agency established in 1949 and responsible for foreign intelligence collection and counterterrorism operations conducted outside Israel's borders. It describes the agency's departmental structure (collection, political action and liaison, research, technology) and reviews historically documented operations including the 1960 capture of Adolf Eichmann and the rescue of Ethiopian Jews. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Israeli Institutions**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **Israeli Institutions**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Israeli Institutions** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Israeli Institutions: Role Labels and Historical Scope establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Israeli Institutions** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.5 Lesson 5: Chinese Institutions: Historical PLA-SSF Context and Attribution Limits

Concept. Chinese Institutions: Historical PLA-SSF Context and Attribution Limits uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. The inherited MERICS source is November 2023 analysis: PLA Strategic Support Force (PLA-SSF) is explicitly pre-April-2024-reorganization historical context, not an assumed current institution. This source cannot certify a 2026 PLA organization chart, so present structure and exact successor remits remain outside its supported scope. State-security, military, and party bodies are different institutional categories; an APT label is an analytic attribution label, not itself proof of formal membership, command, capability, or legal responsibility. A correct comparison records the date and claimed relationship separately and withholds a current or actor-attribution conclusion where primary evidence is absent.

Why it matters. Chinese Institutions connects classroom vocabulary to Analytic Tradecraft and Source Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Chinese Institutions: Historical PLA-SSF Context and Attribution Limits**: [ageint009]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support

is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Chinese Institutions**, inspect the original passages. Curriculum annotation for [ageint009]: A November 2023 report from MERICS (Mercator Institute for China Studies) analyzing Chinese state-affiliated cyber intrusions aimed at strategic goals. It argues that Chinese actors pursue long-term, persistent access to European technology firms and critical infrastructure for espionage rather than disruption, with targeting aligned to government priorities such as semiconductors, pharmaceuticals, and advanced manufacturing. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Chinese Institutions**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **Chinese Institutions**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Chinese Institutions** work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Chinese Institutions: Historical PLA-SSF Context and Attribution Limits replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Chinese Institutions** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.6 Lesson 6: BRUSA, UKUSA, and Allied Sharing: History versus Permission

Concept. BRUSA, UKUSA, and Allied Sharing: History versus Permission uses the sharing arrangement to distinguish alliance governance, handling rules, legal authority, and source caveats.

Worked reasoning and limits. Historical BRUSA/UKUSA records can establish an agreement's wording and institutional setting at a stated date; they do not by themselves establish every contemporary Five Eyes practice. Sharing arrangements coordinate partners with distinct domestic authorities rather than create one borderless agency or a blanket right to redistribute material. In the synthetic port handoff, an allied-source tag is not release permission: the recipient needs the supplied originator caveat and permitted audience, and an unknown field triggers a hold. Separate agreement date, archival release date, record completeness, and the present claim being made.

Why it matters. Without explicit treatment of **BRUSA, UKUSA, and Allied Sharing**, source laundering undermines structured reasoning and source-integrity review; the lesson builds the habit to separate reporting from inference, and inference from judgment.

Source support. Inherited source-guide context for **BRUSA, UKUSA, and Allied Sharing: History versus Permission**: [ageint010] and [ageint011]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **BRUSA, UKUSA, and Allied Sharing**, inspect the original passages. Curriculum annotation for [ageint010]: An online archive maintained by Unredacted UK that compiles declassified government documents on intelligence sharing among the Five Eyes nations (United States, United Kingdom, Canada, Australia, and New Zealand). The collection traces the emergence and evolution of bilateral and multilateral agreements from the postwar era, including the BRUSA and UKUSA agreements, drawing on records from UK, US, and Australian agencies plus freedom-of-information releases. Curriculum annotation for [ageint011]: A curated collection from Unredacted UK presenting documents declassified by the NSA and GCHQ in 2010 relating to US-UK signals intelligence cooperation. It covers the 1946 British-US Communications Agreement (BRUSA), its wartime origins from 1940, and its evolution into the 1956 UKUSA Agreement and the broader Five Eyes alliance. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **BRUSA, UKUSA, and Allied Sharing**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **BRUSA UKUSA and Allied Sharing**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **BRUSA, UKUSA, and Allied Sharing** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that BRUSA, UKUSA, and Allied Sharing: History versus Permission can be used while ignoring the rule to separate reporting from inference, and inference from judgment.

Transfer task. Transfer **BRUSA, UKUSA, and Allied Sharing** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.7 Lesson 7: Non-State Intelligence Activity: Categories without Person-Level Attribution

Concept. Non-State Intelligence Activity: Categories without Person-Level Attribution uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. Non-state actors may gather, interpret, and use information, but organizational labels such as criminal, terrorist, or private military company do not establish a particular person's conduct, intent, or legal status. Compare purpose, resources, accountability, and access only to the extent documented in a supplied historical or synthetic case. A researcher's use of public information is not evidence of hostile collection, and similarity of technique is not evidence of shared sponsorship. The inherited source supplies contextual discussion, not a license to investigate real people or a validated attribution test.

Why it matters. Non-State Intelligence Activity matters in the **Analytic Tradecraft and Source Integrity** lane because structured reasoning and source-integrity evidence must stay separate from judgment; source laundering is a common failure.

Source support. Inherited source-guide context for **Non-State Intelligence Activity: Categories without Person-Level Attribution**: [ageint012]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Non-State Intelligence Activity**, inspect the original passages. Curriculum annotation for [ageint012]: A Grey Dynamics analysis article (Rachel Brown, 2021) on how non-state actors conduct counterintelligence. It argues that although such groups lack the technical collection capabilities of states, they compensate through open-source and human-source methods and benefit defensively from compartmentalized, cell-based structures and ideological cohesion. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Non-State Intelligence Activity**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **State Intelligence Activity**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Non-State Intelligence Activity** work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Non-State Intelligence Activity: Categories without Person-Level Attribution is optional whenever separate reporting from inference, and inference from judgment feels inconvenient.

Transfer task. Transfer **Non-State Intelligence Activity** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.8 Lesson 8: Fusion Centers and Task Forces: Specify the Coordination Model

Concept. Fusion Centers and Task Forces: Specify the Coordination Model is taught in the **Analytic Tradecraft and Source Integrity** lane. The analytic distinction is to separate reporting from inference, and inference from judgment. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A fusion center is a coordination/analysis arrangement, while a task force is organized around a defined mission; neither label transfers every participant's statutory powers to every other participant. The inherited acronym JITF is not expanded by its cited evidence and must not silently be read as JTTF, a particular Joint Intelligence Task Force, or another organization. Leave the intended JITF model unresolved until a dated charter supplies its full name, membership, scope, and accountable lead. In a fictional handoff, the useful fields are sending role, receiving role, purpose, caveat, decision owner, and unresolved authority—not an unsupported acronym-based claim of permission.

Why it matters. Analysts use **Fusion Centers and Task Forces** to separate reporting from inference, and inference from judgment. A defensible treatment names the judgment it enables for structured reasoning and source-integrity review, the proof limit that source laundering would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Fusion Centers and Task Forces: Specify the Coordination Model**: [ageint306] and [ageint312]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Fusion Centers and Task Forces**, inspect the original passages. Curriculum annotation for [ageint306]: Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support. Curriculum annotation for [ageint312]: Official Government of Canada guide for responsible use of agentic AI, used for public-sector agent governance and accountability source support. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Fusion Centers and Task Forces**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **Fusion Centers and Task Forces**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Fusion Centers and Task Forces** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Fusion Centers and Task Forces: Specify the Coordination Model establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Fusion Centers and Task Forces** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.2.9 Lesson 9: Oversight: Legislative, Judicial, and Executive Functions

Concept. Oversight: Legislative, Judicial, and Executive Functions is taught in the **Analytic Tradecraft and Source Integrity** lane. The analytic distinction is to separate reporting from inference, and inference from judgment. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. In U.S. orientation, congressional committees perform legislative scrutiny and funding/authorization functions; courts address matters within their legal jurisdiction; executive oversight includes agency review, inspectors general, and privacy/civil-liberties mechanisms. These are different checks, not three interchangeable sign-off routes, and inspectors general are not courts. The public overview is an introductory snapshot inspected on 6 November 2026, not a legal opinion about a particular activity; verify dated governing records before assigning a specific approval duty [United States Intelligence Community, 2026]. In the synthetic port case, an analytic reviewer checks support, a release reviewer checks permitted distribution, and an oversight/legal role receives the unresolved authority issue; none may cure it merely by endorsing the conclusion.

Why it matters. Oversight: Legislative, Judicial, and Executive Functions connects classroom vocabulary to Analytic Tradecraft and Source Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Oversight: Legislative, Judicial, and Executive Functions**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d].

Evidence to inspect. For **Oversight: Legislative, Judicial, and Executive Functions**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Oversight**, build a **dissemination map with audience, caveat, marking, records, and feedback fields** for this structured reasoning and source-integrity review topic. The artifact must name the source descriptor, the bounded claim about **Oversight**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Oversight: Legislative, Judicial, and Executive Functions** work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Oversight: Legislative, Judicial, and Executive Functions replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Oversight: Legislative, Judicial, and Executive Functions** to a second module by preserving structured reasoning and source-integrity review, changing the source evidence, and naming a new reviewer.

6.2.3 Intelligence Community Architectures worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic analyst cell evaluates whether a benign supplier delay signals normal friction or elevated risk. [ageint234]; [ageint247].

Contextual source routes. For module 2's worked-example section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **intelligence-cycle governance**. Learners use a **requirements-to-product traceability ledger** and keep this boundary visible: Activities stay inside public, synthetic, or instructor-provided materials and never become live collection or tasking.

Frame. The classroom question centers on **U.S. Intelligence Community: Elements, Functions, and Responsibility**. Excluded actions stay explicit, and the **Dissemination-and-Marking Control Lens** planning question is: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?

Inputs. For the **U.S. Intelligence Community: Elements, Functions, and Responsibility** scenario, use a fictional two-day shipment delay,

a dated weather closure on the route, a copied rumor of financial distress, and no supplier accounts. The Dissemination-and-Marking Control Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **U.S. Intelligence Community: Elements, Functions, and Responsibility**, students first compare weather, scheduling friction, and distress hypotheses; then mark assumptions and test each item's diagnostic value rather than tally supporting mentions; remove the copied rumor and then the weather notice separately to expose which judgments depend on each. Record dissent about route coverage and stop a firm attribution or numerical forecast until the instructor reviews the missing evidence. Pause whenever an inference about U.S. Intelligence Community: Elements, Functions, and Responsibility appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a hypothesis table provisionally favoring weather disruption with limited evidentiary confidence, distress unresolved rather than disproved, and a route-coverage gap assigned to the reviewer; any forecast would separately specify its event, horizon, and likelihood, not translate confidence into an event probability Retain it as the **requirements-to-product traceability ledger** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **U.S. Intelligence Community: Elements, Functions, and Responsibility** as "Dissemination-and-Marking Control Lens confirms it" is not enough. The revision ties the claim to structured reasoning and source-integrity review, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **U.S. Intelligence Community: Elements, Functions, and Responsibility** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

6.2.4 Intelligence Community Architectures practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Dissemination-and-Marking Control Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

Contextual source routes. For module 2's practice-sequence section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare U.S. Intelligence Community: Elements, Functions, and Responsibility, Soviet and Russian Institutions: Historical Lineage and Comparison Limits, British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Analytic Tradecraft and Source Integrity** lane.
2. Frame	Answer the lens question: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for U.S. Intelligence Community: Elements, Functions, and Responsibility: dissemination map with audience, caveat, marking, records, and feedback fields.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the requirements-to-product traceability ledger fields for U.S. Intelligence Community: Elements, Functions, and Responsibility.	Unit profile note.	Evidence artifacts include requirement card, source descriptor.
4. Challenge	Test the misconception that U.S. Intelligence Community: Elements, Functions, and Responsibility replaces human review whenever evidence looks plausible.	Failure-mode note.	The artifact applies the key distinction: separate reporting from inference, and inference from judgment.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

6.2.4.1 Intelligence Community Architectures instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. [ageint234]; [ageint247].

6.2.4.2 Intelligence Community Architectures extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 6.

Have learners swap artifacts and apply the **Dissemination-and-Marking Control Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.2.5 Intelligence Community Architectures knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 6.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **U.S. Intelligence Community: Elements, Functions, and Responsibility**.

2. Transfer the **Dissemination-and-Marking Control Lens** artifact from **U.S. Intelligence Community: Elements, Functions, and Responsibility** to the final topic, **Oversight: Legislative, Judicial, and Executive Functions**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Analytic Tradecraft and Source Integrity** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which assumption would change the judgment if it were false?
5. Correct this misconception: that U.S. Intelligence Community: Elements, Functions, and Responsibility replaces human review whenever evidence looks plausible.

6.2.5.1 Intelligence Community Architectures answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **U.S. Intelligence Community: Elements, Functions, and Responsibility** without source evidence, uncertainty, or a safe transfer task.

6.3 Intelligence Community Architectures assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 6.

6.3.1 Intelligence Community Architectures evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 6.

6.3.2 Intelligence Community Architectures transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 6.

6.3.2.1 Intelligence Community Architectures lineage and source tradition: profile, concepts, and first anchors This sits in the **Analytic Tradecraft and Source Integrity** lineage: turning uncertainty into reviewable judgment through sourcing, alternatives, separated likelihood and confidence language, warning indicators, and explicit analytic lineage. [ageint234]; [ageint247].

6.3.2.2 Intelligence Community Architectures working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 6.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**, with provenance and reviewability throughout.

6.3.2.3 Intelligence Community Architectures knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** reporting, assumptions, alternatives, confidence language, dissent, and source descriptors. [ageint234]; [ageint247].
- **Transforms:** hypothesis generation, evidence sorting, assumption challenge, confidence calibration, and dissent capture.
- **Outputs:** analytic note, hypothesis table, assumption list, and confidence statement.
- **Failure modes:** single-hypothesis reasoning, source laundering, confidence inflation, and suppressed dissent.

6.3.2.4 Intelligence Community Architectures transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 6.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.
- **Evidence contract:** keep the **Analytic Tradecraft and Source Integrity** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as analytic note, hypothesis table, assumption list, and confidence statement that another reviewer can audit.

6.3.2.5 Intelligence Community Architectures profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 6.

The matched profile emphasizes turning uncertainty into reviewable judgment through sourcing, alternatives, separated likelihood and confidence language, warning indicators, and explicit analytic lineage. The method stack is key assumptions check, analysis of competing hypotheses, diagnosticity review, indicators and warnings, probability calibration, red-team review, collective tradecraft rating, and source descriptor audit; the local topic cluster is **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.3 Intelligence Community Architectures evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 6.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Analytic Tradecraft and Source Integrity** profile tells reviewers what evidence is strong enough for the module artifact built around **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.3.1 Intelligence Community Architectures guide source spine: inherited keys and local citation roles Primary guide citations: [ageint234]; [ageint247]; [ageint249]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint006]; [ageint007]; [ageint008]; [ageint009]; [ageint010]; [ageint011]; [ageint012]; [ageint297]; [ageint298]; [ageint306]; [ageint312].

6.3.3.2 Intelligence Community Architectures verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint234]; [ageint247].

Tier	What counts	How it is used
Source guide	[ageint234]; [ageint247]; [ageint249]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint006]; [ageint007]; [ageint008]; [ageint009]; [ageint010]; [ageint011]; [ageint012]; [ageint297]; [ageint298]; [ageint306]; [ageint312].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 2's source-canon section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits** and [ageint234]; [ageint247], but only directly verified source URLs are encoded as citations.

6.3.3.3 Intelligence Community Architectures intelligence practice lens: evidence artifact and safety check Practice lens: **Dissemination-and-Marking Control Lens** for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. [ageint234]; [ageint247].

Planning question: Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact?

Evidence artifact: dissemination map with audience, caveat, marking, records, and feedback fields.

Validation rule: verify source authority, public/classification status, CAPCO-safe vocabulary, audience need, and records disposition before reuse. Applied to **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

Handoff contract: deliver release-neutral summaries, source metadata, marking rationale, and review ownership as separate fields.

Safety check: exclude classified content, live release decisions, source-method exposure, and improvised control markings.

6.3.3.4 Intelligence Community Architectures runtime-to-reader map: generated sections and verifier surfaces **Navigation.** Parent section: Section 6.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	2.99	2.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Intelligence Community Architectures to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Bounded autonomy, procurement, incident-response, and assurance studio	2.101	2.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Intelligence Community Architectures	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Model-card, recoverability, retention, and learner-support evidence package	2.102	2.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Intelligence Community Architectures	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
U.S. Intelligence Community: Elements, Functions, and Responsibility	2.1	2.1 U.S. Intelligence Community: Elements, Functions, and Responsibility	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check

Non-State Intelligence Activity: Categories without Person-Level Attribution	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Fusion Centers and Task Forces: Specify the Coordination Model	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings
Oversight: Legislative, Judicial, and Executive Functions	Dissemination-and-Marking Control Lens	dissemination map with audience, caveat, marking, records, and feedback fields	exclude classified content, live release decisions, source-method exposure, and improvised control markings

6.3.3.6 Intelligence Community Architectures annotated source ledger: real titles and local contribution Each source cited by this **Analytic Tradecraft and Source Integrity** module is paired below with its real title and a one-line note on what it contributes to **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

Source	Cited work	Curriculum annotation	Status
[ageint234]	AI Act	The European Commission's official page on the AI Act, described as the first comprehensive legal framework on artificial intelligence worldwide. It explains the regulation's risk-based approach, classifying AI systems into unacceptable, high, transparency, and minimal risk tiers, with prohibited practices and strict requirements for high-risk uses.	verified source-guide; annotation metadata, not claim verification
[ageint247]	AI in the Public Sector	Official OECD.AI public-sector AI theme page.	original source-guide; annotation metadata, not claim verification
[ageint249]	GovTech: Putting People First	The official page for the World Bank's Global Program on GovTech and Public Sector Innovation, which helps governments use technology and data to improve public services and governance. It describes support for digital transformation in public administration across areas such as tax administration, public financial management, human resource systems, and citizen engagement, with cross-cutting themes including responsible AI and green digital transformation.	verified source-guide; annotation metadata, not claim verification
[ageint276]	What is a Data Protection Impact Assessment and When Is This Mandatory?	A European Data Protection Board FAQ page, part of its data protection guide for small businesses, explaining Data Protection Impact Assessments (DPIAs) and when they are mandatory. It describes a DPIA as a written assessment of the impact of a planned processing operation, required when processing poses high risks to individuals' rights.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint277]	Endorsed WP29 Guidelines	This is a European Data Protection Board webpage listing guidelines and documents originating from the Article 29 Working Party that the EDPB endorsed at its first plenary meeting. The catalogued materials relate to the GDPR and cover topics such as consent and transparency, data breach notification, automated decision-making and profiling, data protection impact assessments, data protection officers, and binding corporate rules.	verified source-guide; annotation metadata, not claim verification
[ageint284]	Verifiable Credential Data Integrity 1.0	The W3C Recommendation for Verifiable Credential Data Integrity 1.0, published May 2025, defining mechanisms for ensuring the authenticity and integrity of verifiable credentials using cryptographic proofs. It specifies a process of data transformation, hashing, and proof generation, and a corresponding verification procedure, along with a proof data model containing properties such as type, verification method, purpose, and proof value.	verified source-guide; annotation metadata, not claim verification
[ageint288]	Algorithmic Transparency Recording Standard Hub	A GOV.UK collection page serving as the hub for the UK Algorithmic Transparency Recording Standard (ATRS), maintained by the Government Digital Service. It provides a standardized template for documenting public-sector use of algorithmic tools, completion guidance, policy on scope and compliance, and a searchable repository of published transparency records.	verified source-guide; annotation metadata, not claim verification
[ageint289]	Guidance for Organisations Using the Algorithmic Transparency Recording Standard	This is a GOV.UK guidance page published by the Government Digital Service that instructs public sector organizations on completing the Algorithmic Transparency Recording Standard (ATRS) template and publishing their records to the GOV.UK repository. It applies both to central government bodies required to publish under mandatory policy and to other public sector bodies doing so voluntarily.	verified source-guide; annotation metadata, not claim verification
[ageint293]	Inventory of NARA Artificial Intelligence (AI) Use Cases	The National Archives and Records Administration (NARA) official inventory of its artificial intelligence use cases, documenting 14 projects across deployed, pilot, and planned stages. Deployed efforts include workplace productivity tools, automated tagging for museum experiences, and historical record retrieval, while pilots cover PII detection and redaction, semantic search, and metadata generation, and planned work targets FOIA processing and public search.	verified source-guide; annotation metadata, not claim verification
[ageint006]	Director of National Intelligence - Intelligence Community Directives	A Federation of American Scientists repository cataloguing the Intelligence Community Directives (ICDs) issued by the Director of National Intelligence. ICDs are the principal means by which the DNI provides policy, guidance, and direction to the U.S. Intelligence Community.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint007]	THE FRIENDS BRITAIN'S POST-WAR SECRET INTELLIGENCE	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint008]	Mossad / Military History and Science	An EBSCO Research Starter reference article on the Mossad, Israel's national intelligence agency established in 1949 and responsible for foreign intelligence collection and counterterrorism operations conducted outside Israel's borders. It describes the agency's departmental structure (collection, political action and liaison, research, technology) and reviews historically documented operations including the 1960 capture of Adolf Eichmann and the rescue of Ethiopian Jews.	verified source-guide; annotation metadata, not claim verification
[ageint009]	"Here to stay" – Chinese state-affiliated hacking for strategic goals	A November 2023 report from MERICS (Mercator Institute for China Studies) analyzing Chinese state-affiliated cyber intrusions aimed at strategic goals. It argues that Chinese actors pursue long-term, persistent access to European technology firms and critical infrastructure for espionage rather than disruption, with targeting aligned to government priorities such as semiconductors, pharmaceuticals, and advanced manufacturing.	verified source-guide; annotation metadata, not claim verification
[ageint010]	The Five Eyes Archive	An online archive maintained by Unredacted UK that compiles declassified government documents on intelligence sharing among the Five Eyes nations (United States, United Kingdom, Canada, Australia, and New Zealand). The collection traces the emergence and evolution of bilateral and multilateral agreements from the postwar era, including the BRUSA and UKUSA agreements, drawing on records from UK, US, and Australian agencies plus freedom-of-information releases.	verified source-guide; annotation metadata, not claim verification
[ageint011]	BRUSA and UKUSA Agreements: GCHQ and NSA	A curated collection from Unredacted UK presenting documents declassified by the NSA and GCHQ in 2010 relating to US-UK signals intelligence cooperation. It covers the 1946 British-US Communications Agreement (BRUSA), its wartime origins from 1940, and its evolution into the 1956 UKUSA Agreement and the broader Five Eyes alliance.	verified source-guide; annotation metadata, not claim verification
[ageint012]	Counterintelligence Activities of Non-State Actors - Grey Dynamics	A Grey Dynamics analysis article (Rachel Brown, 2021) on how non-state actors conduct counterintelligence. It argues that although such groups lack the technical collection capabilities of states, they compensate through open-source and human-source methods and benefit defensively from compartmentalized, cell-based structures and ideological cohesion.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint306]	Artificial Intelligence	Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support.	original source-guide; annotation metadata, not claim verification
[ageint312]	Guide on the Use of Agentic Artificial Intelligence	Official Government of Canada guide for responsible use of agentic AI, used for public-sector agent governance and accountability source support.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 6; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

6.3.4 Intelligence Community Architectures governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 6.

6.3.5 Intelligence Community Architectures analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 2's governance-boundary section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Analytic Tradecraft and Source Integrity** for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. [ageint234]; [ageint247].

Curriculum topic spine: U.S. Intelligence Community: Elements, Functions, and Responsibility, **Soviet and Russian Institutions: Historical Lineage and Comparison Limits**, **British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles**. **Recorded source cluster; inspection and scope limits apply:** [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]; [Central Intelligence Agency Center for the Study of Intelligence, 2002]; [Central Intelligence Agency Center for the Study of Intelligence, 1994]; [Defense Intelligence Agency, 2016].

Conceptual depth: turning uncertainty into reviewable judgment through sourcing, alternatives, separated likelihood and confidence language, warning indicators, and explicit analytic lineage.

Method stack: key assumptions check, analysis of competing hypotheses, diagnosticity review, indicators and warnings, probability calibration, red-team review, collective tradecraft rating, and source descriptor audit.

Composability contract: every agent output must preserve evidence, assumptions, judgments, likelihood, confidence, dissent, empirical limits, and change history as separable fields.

Known failure modes: source laundering, automation bias, hidden assumptions, collapsed likelihood/confidence language, hindsight certainty, SAT-as-bias-cure overclaiming, and visually persuasive but weakly sourced claims.

Defensive boundary: analysis remains educational and decision-supportive; it does not become tasking, targeting, covert collection, or policy advocacy. Applied to **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

Anchor	Why it matters here
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026e]	Official ODNI explanation of analytic objectivity, ombuds, and tradecraft standards. Checked as of 2026-05-21; role: curriculum_anchor.
[Central Intelligence Agency, 2009]	Official structured analytic techniques primer for bias checks, alternatives, and warning analysis. Checked as of 2026-05-21; role: curriculum_anchor.
[Central Intelligence Agency Center for the Study of Intelligence, 2002]	Official CIA Center for the Study of Intelligence essay on Kent's professionalization of intelligence analysis and analytic standards. Checked as of 2026-06-11; role: curriculum_anchor.
[Central Intelligence Agency Center for the Study of Intelligence, 1994]	Official CIA CSI republication of Kent's final essay on analyst-policy relations, warning, intention, and communication boundaries. Checked as of 2026-06-11; role: curriculum_anchor.
[Defense Intelligence Agency, 2016]	Defense intelligence structured-analysis primer for classroom analytic exercises. Checked as of 2026-05-21; role: curriculum_anchor.

6.3.5.1 Intelligence Community Architectures evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Analytic Tradecraft and Source Integrity** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint234]; [ageint247].

6.3.6 Intelligence Community Architectures agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 6.

AGEINT translation is bounded by the **Analytic Tradecraft and Source Integrity** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.6.1 Intelligence Community Architectures permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 6.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.6.2 Intelligence Community Architectures excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint234]; [ageint247] and **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

6.3.7 Intelligence Community Architectures governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 6.

Governance is practiced as a gate on the **Analytic Tradecraft and Source Integrity** lane. Learners use the **Dissemination-and-Marking Control Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-

assisted artifact must stop for human review while using **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.7.1 Intelligence Community Architectures governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint234]; [ageint247].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Analytic Tradecraft and Source Integrity** failure modes and the **Dissemination-and-Marking Control Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

6.3.7.2 Intelligence Community Architectures evidence package handoff: appendices, records, and reuse

Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Dissemination-and-Marking Control Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.7.3 Intelligence Community Architectures current-source assurance: verified anchors and local artifact fit

The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. [ageint234]; [ageint247].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_odni_icd_203` for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**?	Intelligence Community Directive 203: Analytic Standards; lane `source_quality_spine`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; source-quality triangulation and claim-boundary review
What does the module inherit from `official_odni_icd_206` for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**?	Intelligence Community Directive 206: Sourcing Requirements for Disseminated Analytic Products; lane `analytic_tradecraft`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official sourcing directive for traceability, citations, source descriptors, and source summaries.
What does the module inherit from `official_odni_objectivity` for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**?	Objectivity and IC Analytic Standards; lane `analytic_tradecraft`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official ODNI explanation of analytic objectivity, ombuds, and tradecraft standards.
What does the module inherit from `official_cia_tradecraft_primer` for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**?	A Tradecraft Primer: Structured Analytic Techniques for Improving Intelligence Analysis; lane `analytic_tradecraft`; checked 2026-05-21.	dissemination map with audience, caveat, marking, records, and feedback fields; Official structured analytic techniques primer for bias checks, alternatives, and warning analysis.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 6; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

6.3.8 Intelligence Community Architectures assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 6.

6.3.9 Intelligence Community Architectures assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 6.

6.3.9.1 Intelligence Community Architectures capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits** and [ageint234]; [ageint247].

6.3.9.2 Intelligence Community Architectures instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits** and [ageint234]; [ageint247].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

6.3.9.3 Intelligence Community Architectures assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
U.S. Intelligence Community: Elements, Functions, and Responsibility; **Soviet and Russian Institutions: Historical Lineage and Comparison Limits**; **British Intelligence: Security, Foreign Intelligence, Defence, and Assessment Roles** **Israeli Institutions: Role Labels and Historical Scope**; **Chinese Institutions: Historical PLA-SSF Context and Attribution Limits**; **BRUSA, UKUSA, and Allied Sharing: History versus Permission** **Non-State Intelligence Activity: Categories without Person-Level Attribution**; **Fusion Centers and Task Forces: Specify the Coordination Model**; **Oversight: Legislative, Judicial, and Executive Functions**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: verify source authority, public/classification status, CAPCO-safe vocabulary, audience need, and records disposition before reuse. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude classified content, live release decisions, source-method exposure, and improvised control markings.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

6.3.10 Intelligence Community Architectures refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint234]; [ageint247] and **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**.

6.3.10.1 Intelligence Community Architectures refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. The local signals begin with [ageint234]; [ageint247].

6.3.10.2 Intelligence Community Architectures claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**, and the source spine for these checks begins with [ageint234]; [ageint247].

6.3.11 Intelligence Community Architectures reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint234]; [ageint247].

Contextual source routes. For module 2's review-checklist section, the **Analytic Tradecraft and Source Integrity** catalog routes include [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2026e]; [Central Intelligence Agency, 2009]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits**. [ageint234]; [ageint247].

- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

6.3.12 Intelligence Community Architectures learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **U.S. Intelligence Community: Elements, Functions, and Responsibility; Soviet and Russian Institutions: Historical Lineage and Comparison Limits** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint234]; [ageint247].

Section 2, Section 4, Section 5, Section 7

7 Tradecraft: Core Principles

7.0.1 Tradecraft: Core Principles figures and course links: visual evidence, source flow, and navigation

The module uses Figure 35 and Figure 30 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 4, Section 6, Section 8.
This module teaches the **Governed Intelligence Cycle and Dissemination Architecture** lane through a bounded, source-backed coursebook chapter. [ageint237]; [ageint266].

7.1 Governed Intelligence Cycle and Dissemination Architecture frame for Tradecraft: Core Principles: source context, topic focus, and reader task

Navigation. Parent section: Section 7.

7.1.1 Tradecraft: Core Principles orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 7.

7.1.2 Tradecraft: Core Principles conceptual primer: source context, core model, and reader task

This chapter teaches intelligence as a governed information cycle: requirements become collection, collection becomes evaluated evidence, evidence becomes analytic judgment, and judgment becomes a disseminated product with markings, records, feedback, and oversight. The chapter uses **Structured-Judgment Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.
The central distinction is to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. Core topics include **Tradecraft: Historical Practice and Analytic Discipline; Operations security (OPSEC) governance; Compartmentation and need-to-know governance**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint237]; [ageint266].
Learners move from vocabulary and the **Structured-Judgment Lens** distinction through topic lessons on **Tradecraft: Historical Practice and Analytic Discipline** with evidence and misconception checks, then assemble an **analytic note with hypotheses, evidence table, confidence, and dissent fields** with safety and rights gates.

7.1.3 Tradecraft: Core Principles learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 7.

- Connect **Tradecraft: Historical Practice and Analytic Discipline and Operations security (OPSEC) governance** to **Governed Intelligence Cycle and Dissemination Architecture** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build an **analytic note with hypotheses, evidence table, confidence, and dissent fields** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as cycle theater, undocumented dissemination, classification drift, unclear release authority, stale records assumptions, and feedback loops that hide bias, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: cycle and marking material remains public-source and educational; it never handles classified content, live release decisions, or source-method exposure.

7.1.4 Tradecraft: Core Principles core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 7.

Term	Working definition
Requirement	the decision need or learning question that justifies evidence collection
Dissemination	the controlled movement of an intelligence product to an authorized audience
Marking	the vocabulary that communicates handling, caveat, and release limits
Feedback loop	the customer or reviewer signal that tests whether the product answered the need
Records duty	the retention, deletion, or refresh obligation attached to an artifact
Decision hygiene	habits that keep requirements, evidence, and reviewer judgment aligned under load
Information architecture	how sources, notes, and products are organized so uncertainty stays visible

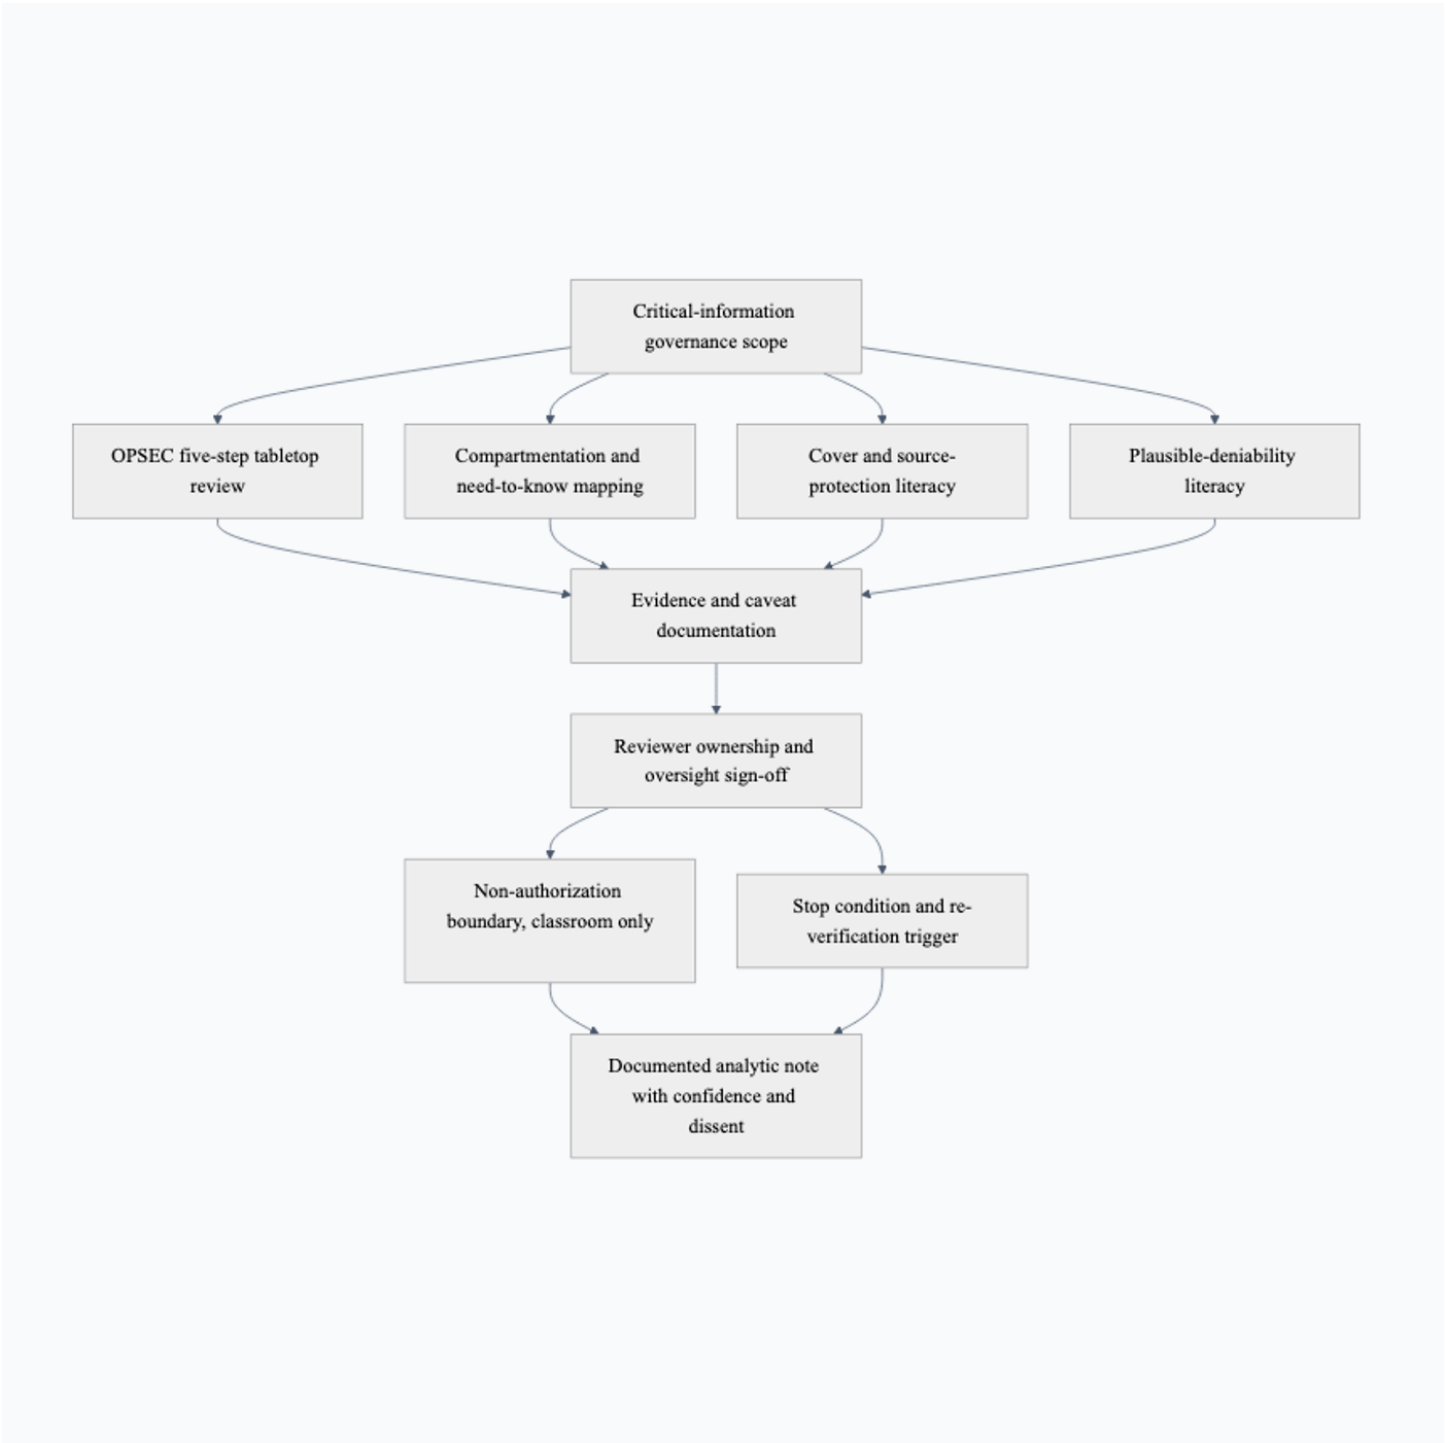

Figure 35: How core tradecraft concepts are taught as documented governance controls feeding analytic oversight, not as operational activity. It is anchored to the foundations of intelligence tradecraft / tradecraft core principles section; use it to inspect Critical-information governance scope, OPSEC five-step tabletop review, Compartmentation and need-to-know mapping, and Cover and source-protection literacy while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

7.2 Structured-Judgment Lens path for Tradecraft: Core Principles: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 7.

7.2.1 Tradecraft: Core Principles practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 7.

7.2.2 Tradecraft: Core Principles topic lessons: source-backed concepts and transfer tasks

Tradecraft: Core Principles builds intelligence as a governed information cycle: requirements become collection, collection becomes evaluated evidence, evidence becomes analytic judgment, and judgment becomes a disseminated product with markings, records, feedback, and oversight. The sequence opens with **Tradecraft: Historical Practice and Analytic Discipline**, **Operations security (OPSEC) governance**, **Compartmentation and need-to-know governance** and applies the **Structured-Judgment Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 30; module overview Section 7; curriculum atlas Section 2.

Contextual source routes. For module 3's topic-lessons section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

7.2.2.1 Lesson 1: Tradecraft: Historical Practice and Analytic Discipline

Concept. Tradecraft: Historical Practice and Analytic Discipline treats operational tradecraft as governance: OPSEC, compartmentation, cover discipline, and oversight—not contact or evasion activity.

Worked reasoning and limits. Tradecraft can refer to historical practices of intelligence work or to disciplined analytic reasoning; the senses overlap but are not interchangeable. Historical descriptions of clandestine practice do not authorize classroom enactment or prove a method's effectiveness, while analytic tradecraft concerns explicit assumptions, alternatives, sourcing, and warranted confidence. A diagnostic answer should identify which sense a passage uses and what evidence would support its claim. This chapter studies public records and synthetic artifacts, not how to conduct operations.

Why it matters. Tradecraft: Historical Practice and Analytic Discipline matters in the **Governed Intelligence Cycle and Dissemination Architecture** lane because cycle mapping and audience-aware product design evidence must stay separate from judgment; confusing governance vocabulary with operational authorization is a common failure.

Source support. Inherited source-guide context for **Tradecraft: Historical Practice and Analytic Discipline**: [ageint013] and [ageint014]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Tradecraft: Historical Practice and Analytic Discipline**, inspect the original passages. Curriculum annotation for [ageint013]: This is an instructional training document hosted on Scribd that introduces the fundamentals of intelligence tradecraft, defined as the methods and skills used in intelligence operations. It covers core concepts and types of tradecraft, cover and operational security, casing and surveillance, clandestine communication, and information gathering. Curriculum annotation for [ageint014]: An educational article from TRDCRFT defining tradecraft as the techniques, strategies, and tools used by intelligence operatives to pursue objectives while maintaining secrecy and operational security. It surveys core disciplines such as surveillance and counter-surveillance, cover and disguise, technical and human intelligence work, and the field's evolution toward digital and cyber methods. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Tradecraft**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Tradecraft**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape **Tradecraft: Historical Practice and Analytic Discipline** work as a **requirements-to-product traceability ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Tradecraft: Historical Practice and Analytic Discipline**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Transfer **Tradecraft: Historical Practice and Analytic Discipline** from this module to a second motif by preserving cycle mapping and audience-aware product design, replacing action with audit, and naming the blocked use.

7.2.2.2 Lesson 2: Operations security (OPSEC) governance

Concept. Operations security (OPSEC) governance applies the five-step OPSEC process—identify critical information, analyze threats, analyze vulnerabilities, assess risk, apply countermeasures—in tabletop governance review only.

Worked reasoning and limits. Completed synthetic five-step case: a fictional course handout contains an invented room-access code and a public timetable; critical information is the code, the assumed threat is unintended reader access, and the vulnerability is its inclusion in the distribution copy. The risk judgment is unnecessary disclosure with no teaching benefit; the approved countermeasure is removing the code while retaining the timetable, with the instructor as release owner. A second supplied copy still has the code in its comments, so review rejects that copy and records residual risk from unexamined versions; the stop is no release until the approved copy and comments are checked. This is a normative classroom application of critical-information, threat, vulnerability, risk, and countermeasure reasoning, not an OPSEC efficacy result; inherited analytic-standard citations alone do not establish the method's historical doctrine.

Why it matters. Operations security (OPSEC) governance connects classroom vocabulary to Governed Intelligence Cycle and Dissemination Architecture practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Operations security (OPSEC) governance**: [ageint305], [ageint304], and [ageint303]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Operations security (OPSEC) governance**, inspect the original passages. Curriculum annotation for [ageint305]: Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Operations security (OPSEC) governance**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Operations security governance**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape the same topic work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Operations security (OPSEC) governance**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Operations security (OPSEC) governance** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

7.2.2.3 Lesson 3: Compartmentation and need-to-know governance

Concept. Compartmentation and need-to-know governance maps compartment boundaries, access lists, and need-to-know fields before any information moves across teams.

Worked reasoning and limits. Compartmentation limits access to information according to purpose and authorized need; need-to-share addresses the cost of withholding context required for a valid decision. In a synthetic release matrix, the public reader receives the course timetable, the reviewer receives the reason a field was removed, and only the authorized source custodian receives the original restricted field. Giving everyone the original over-shares; withholding the caveat from the reviewer under-shares and can create a misleading conclusion. Role labels alone are insufficient: both access and onward release require their own applicable permissions.

Why it matters. Analysts use **Compartmentation and need-to-know governance** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that confusing governance vocabulary with operational authorization would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Compartmentation and need-to-know governance**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Compartmentation and need-to-know governance**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Compartmentation and need-to-know governance**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape the same topic work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Compartmentation and need-to-know governance**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Compartmentation and need-to-know governance** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

7.2.2.4 Lesson 4: Cover identity governance literacy

Concept. Cover identity governance literacy — Review cover-and-legend governance as oversight, documentation, and source-protection literacy—not identity fabrication.

Worked reasoning and limits. In historical vocabulary, cover concerns an attributed role or explanation for presence; a legend concerns a supporting identity narrative, while official/non-official are descriptive institutional distinctions rather than a reliability scale. A public glossary or historical account can explain usage but cannot establish any present person's identity, status, privileges, or lawful conduct. The classroom task is to distinguish a source's terminology from what its archival evidence actually shows, leaving missing details unknown. No identity construction, impersonation, evasion, or reconstruction of current methods follows from this literacy exercise.

Why it matters. Without explicit treatment of **Cover identity governance literacy**, confusing governance vocabulary with operational authorization undermines cycle mapping and audience-aware product design review; the lesson builds the habit to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback.

Source support. Inherited source-guide context for **Cover identity governance literacy**: [ageint015]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Cover identity governance literacy**, inspect the original passages. Curriculum annotation for [ageint015]: A Wikipedia article explaining the concept of cover in human intelligence and counterintelligence work, defined as the ostensible identity assumed by a covert agent. It distinguishes official cover (diplomatic channels, immunity) from non-official cover (no government acknowledgment, less protection). The article surveys historical examples of front organizations and assumed identities. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Cover identity governance literacy**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape the same topic work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Cover identity governance literacy**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Apply this module's safe boundary for **Cover identity governance literacy** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

7.2.2.5 Lesson 5: Plausible Deniability: Attribution Claims and Accountability

Concept. Plausible Deniability: Attribution Claims and Accountability uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. Plausible deniability describes an attribution or knowledge claim in historical discussion; it is not proof that responsibility is absent and not a legal defense or authorization supplied by this curriculum. Lack of a named decision-maker in one record may reflect redaction, missing records, delegated work, or intentional concealment, and the record alone may not distinguish them. The model answer preserves those alternatives instead of inferring innocence or culpability. ICD analytic standards support careful reasoning, not the historical origin or legal validity of a deniability doctrine.

Why it matters. Without explicit treatment of **Plausible Deniability**, confusing governance vocabulary with operational authorization undermines cycle mapping and audience-aware product design review; the lesson builds the habit to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback.

Source support. Inherited source-guide context for **Plausible Deniability: Attribution Claims and Accountability**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Plausible Deniability**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Plausible Deniability**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Plausible Deniability**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape **Plausible Deniability** work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Plausible Deniability**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Plausible Deniability** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

7.2.2.6 Lesson 6: Versioned Evidence Memory without Person Tracking

Concept. **Versioned Evidence Memory without Person Tracking** treats operational tradecraft as governance: OPSEC, compartmentation, cover discipline, and oversight—not contact or evasion activity.

Worked reasoning and limits. The inherited heading and surveillance-related source are retained as historical provenance, not as support for a person-tracking or disruption exercise. In a synthetic claim ledger, report R1 says a room was unavailable all day; R2 corrects this to 09:00–10:00 only. Preserve R1 as superseded, link R2 as its correction, and narrow the assessment to the stated hour instead of overwriting the record or treating the reports as independent corroboration. The relevant lesson is evidence lineage and correction memory, supported conceptually by provenance documentation [ageint266], not observation of people or movement patterns.

Why it matters. Analysts use **Versioned Evidence Memory without Person Tracking** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that confusing governance vocabulary with operational authorization would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Versioned Evidence Memory without Person Tracking**: [ageint016]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Versioned Evidence Memory without Person Tracking**, inspect the original passages. Curriculum annotation for [ageint016]: Place where victim can be controlled with limited avenues of escape. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Versioned Evidence Memory without Person Tracking**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Versioned Evidence Memory without Person**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape the same topic work as a **requirements-to-product traceability ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Versioned Evidence Memory without Person Tracking**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Versioned Evidence Memory without Person Tracking** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

7.2.2.7 Lesson 7: Situational Awareness: Observation, Interpretation, and Uncertainty

Concept. **Situational Awareness: Observation, Interpretation, and Uncertainty** treats operational tradecraft as governance: OPSEC, compartmentation, cover discipline, and oversight—not contact or evasion activity.

Worked reasoning and limits. Situational awareness separates noticing an available cue, interpreting its possible meaning, and anticipating implications; the last two involve assumptions, not direct observations. In a supplied synthetic room diagram, a blocked doorway is an observed feature, while an intentional obstruction is only one explanation alongside maintenance or a drawing error. The correct answer records the ambiguity and refers a safety question to the instructor rather than investigating a person or facility. A historical tradecraft account does not validate a general threat-detection ability across urban or rural contexts.

Why it matters. **Situational Awareness** matters in the **Governed Intelligence Cycle and Dissemination Architecture** lane because cycle mapping and audience-aware product design evidence must stay separate from judgment; confusing governance vocabulary with operational authorization is a common failure.

Source support. Inherited source-guide context for **Situational Awareness: Observation, Interpretation, and Uncertainty**: [ageint014]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Situational Awareness**, inspect the original passages. Curriculum annotation for [ageint014]: An educational article from TRDCRFT defining tradecraft as the techniques, strategies, and tools used by intelligence operatives to pursue objectives while maintaining secrecy and operational security. It surveys core disciplines such as surveillance and counter-surveillance, cover and disguise, technical and human intelligence work, and the field's evolution toward digital and cyber methods. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Situational Awareness**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Situational Awareness**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape **Situational Awareness** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Situational Awareness**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Apply this module's safe boundary for **Situational Awareness** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

7.2.2.8 Lesson 8: Public Intelligence Vocabulary and Glossary Error Checking

Concept. Public Intelligence Vocabulary and Glossary Error Checking treats operational tradecraft as governance: OPSEC, compartmentation, cover discipline, and oversight—not contact or evasion activity.

Worked reasoning and limits. A public glossary establishes a term's documented usage, not the truth of a report containing it or permission to disclose actual protected terminology. Synthetic glossary check: draft D1 uses 'agent' for both a human source and a software process, then attributes the software process's access to the person. Correct D1 by naming the two roles explicitly and withdrawing the unsupported access inference; unchanged wording would be a category error, not merely poor style. Public code-word discussion remains historical/descriptive and does not include creating covert communication conventions.

Why it matters. Analysts use **Public Intelligence Vocabulary** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that confusing governance vocabulary with operational authorization would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Public Intelligence Vocabulary and Glossary Error Checking**: [ageint017]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Public Intelligence Vocabulary**, inspect the original passages. Curriculum annotation for [ageint017]: An educational glossary from the International Spy Museum, a nonprofit institution in Washington, DC, presenting an alphabetized dictionary of espionage terminology. It defines operational roles (agent, handler, case officer), intelligence disciplines such as HUMINT, SIGINT, and IMINT, major organizations (CIA, FBI, KGB, MI5, MI6, NSA), and historical equipment like the Enigma machine and U-2 aircraft. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Public Intelligence Vocabulary**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Public Intelligence Vocabulary and Glossary**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape **Public Intelligence Vocabulary** work as a **requirements-to-product traceability ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Public Intelligence Vocabulary**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Public Intelligence Vocabulary** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

7.2.2.9 Lesson 9: Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance

Concept. Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance treats operational tradecraft as governance: OPSEC, compartmentation, cover discipline, and oversight—not contact or evasion activity.

Worked reasoning and limits. The cited professional commentary argues that digital exposure could renew interest in some historical practices; that forecast is not measured evidence of adoption, reduced risk, or comparative effectiveness. An in-person exchange can still involve misunderstanding or deception, so non-digital does not mean authentic or true. Several inherited AI/HUMINT records summarize the same argument and must be treated as one source family rather than independent corroboration. Compare the stated mechanism and countervailing risks at a conceptual level; do not reconstruct exchanges, concealment, or contact procedures.

Why it matters. Analysts use **Classical Tradecraft in AI Commentary** to separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback. A defensible treatment names the judgment it enables for cycle mapping and audience-aware product design review, the proof limit that confusing governance vocabulary with operational authorization would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance**: [ageint018], [ageint005], and [ageint019]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015].

Evidence to inspect. For **Classical Tradecraft in AI Commentary**, inspect the original passages. Curriculum annotation for [ageint018]: A Nextgov article reporting on an essay in the CIA's Studies in Intelligence journal by RAND researcher Thomas Mulligan. It argues that as AI makes deepfakes and synthetic communications easier, trust in digital channels erodes, paradoxically increasing the value of traditional human intelligence methods. Curriculum annotation for [ageint005]: A blog post on SemperVerus summarizing a CIA Studies in Intelligence article, "Espionage in Our AI Future: Why Human Intelligence Still Matters" (Vol. 70, No. 1, March 2026). It argues that as AI makes technical intelligence cheaper and AI-driven fabrication more pervasive, human intelligence becomes relatively more valuable, since human specialists are needed to verify source reliability over time. Curriculum annotation for [ageint019]: By Thomas Mulligan, a researcher at the RAND Corporation who served in CIA during 2008–14. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Classical Tradecraft in AI Commentary**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this cycle mapping and audience-aware product design topic. The artifact must name the governance descriptor, the bounded claim about **Classical Tradecraft in AI Commentary**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight. Shape **Classical Tradecraft in AI Commentary** work as a **requirements-to-product traceability ledger** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Apply this module's safe boundary for **Classical Tradecraft in AI Commentary** to another artifact while keeping cycle mapping and audience-aware product design and reviewer ownership explicit.

7.2.3 Tradecraft: Core Principles worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic analyst team rebuilds a storm-impact brief after discovering a stale requirement and overloaded reading queue. [ageint237]; [ageint266].

Contextual source routes. For module 3's worked-example section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **intelligence-cycle governance**. Learners use a **requirements-to-product traceability ledger** and keep this boundary visible: Activities stay inside public, synthetic, or instructor-provided materials and never become live collection or tasking.

Frame. The classroom question centers on **Tradecraft: Historical Practice and Analytic Discipline**. Excluded actions stay explicit, and the **Structured-Judgment Lens** planning question is: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?

Inputs. For the **Tradecraft: Historical Practice and Analytic Discipline** scenario, use instructor-supplied fictional bulletin A forecasting tomorrow's storm, map B dated two years earlier, notice C cancelling today's buses, and a requirement card asking whether tomorrow's seminar should be postponed. The Structured-Judgment Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Tradecraft: Historical Practice and Analytic Discipline**, students first fix the decision, horizon, customer, and deadline; then log each item's date and scope, separate forecast from observation, and identify the missing tomorrow-service notice; finally restore C's date after a date-hidden comparison and reject any inference that today's cancellation proves tomorrow's status. Stop at the deadline and hand the unresolved service check to the instructor rather than extending collection. Pause whenever an inference about Tradecraft: Historical Practice and Analytic Discipline appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a release-neutral brief stating that storm disruption is possible but tomorrow's bus status is unresolved, with limited evidentiary confidence, a source ledger, instructor review before circulation, and a feedback question about whether the decision need is answered Retain it as the **requirements-to-product traceability ledger** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Tradecraft: Historical Practice and Analytic Discipline** as "Structured-Judgment Lens confirms it" is not enough. The revision ties the claim to cycle mapping and audience-aware product design, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Tradecraft: Historical Practice and Analytic Discipline** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

7.2.4 Tradecraft: Core Principles practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Structured-Judgment Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

Contextual source routes. For module 3's practice-sequence section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Tradecraft: Historical Practice and Analytic Discipline, Operations security governance, Compartmentation and need-to-know governance; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Governed Intelligence Cycle and Dissemination Architecture** lane.
2. Frame	Answer the lens question: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Tradecraft: Historical Practice and Analytic Discipline: analytic note with hypotheses, evidence table, confidence, and dissent fields.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the requirements-to-product traceability ledger fields for Tradecraft: Historical Practice and Analytic Discipline.	Unit profile note.	Evidence artifacts include requirement card, source descriptor.
4. Challenge	Test the misconception that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.	Failure-mode note.	The artifact applies the key distinction: separate intelligence work from ordinary research by naming authority, audience, caveats, and feedback.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

7.2.4.1 Tradecraft: Core Principles instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. [ageint237]; [ageint266].

7.2.4.2 Tradecraft: Core Principles extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 7.

Have learners swap artifacts and apply the **Structured-Judgment Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.2.5 Tradecraft: Core Principles knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 7.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Tradecraft: Historical Practice and Analytic Discipline**.
2. Transfer the **Structured-Judgment Lens** artifact from **Tradecraft: Historical Practice and Analytic Discipline** to the final topic, **Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Governed Intelligence Cycle and Dissemination Architecture** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which requirement, source, or workflow step failed first when the team ran out of review time?
5. Correct this misconception: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

7.2.5.1 Tradecraft: Core Principles answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Tradecraft: Historical Practice and Analytic Discipline** without source evidence, uncertainty, or a safe transfer task.

7.3 Tradecraft: Core Principles assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 7.

7.3.1 Tradecraft: Core Principles evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 7.

7.3.2 Tradecraft: Core Principles transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 7.

7.3.2.1 Tradecraft: Core Principles lineage and source tradition: profile, concepts, and first anchors This sits in the **Governed Intelligence Cycle and Dissemination Architecture** lineage: treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit. [ageint237]; [ageint266].

7.3.2.2 Tradecraft: Core Principles working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 7.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**, with provenance and reviewability throughout.

7.3.2.3 Tradecraft: Core Principles knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** requirements, audience needs, public-source evidence, caveats, and feedback signals. [ageint237]; [ageint266].
- **Transforms:** requirement framing, collection scoping, source evaluation, analytic judgment, dissemination, and feedback review.
- **Outputs:** release-neutral brief, audience map, caveat register, and feedback note.
- **Failure modes:** unscoped audiences, missing caveats, weak records, and product reuse without feedback.

7.3.2.4 Tradecraft: Core Principles transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 7.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.
- **Evidence contract:** keep the **Governed Intelligence Cycle and Dissemination Architecture** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as release-neutral brief, audience map, caveat register, and feedback note that another reviewer can audit.

7.3.2.5 Tradecraft: Core Principles profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 7.

The matched profile emphasizes treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit. The method stack is cycle mapping, priority-to-product traceability, data-lifecycle mapping, classification vocabulary review, dissemination-caveat audit, customer feedback, and oversight checkpointing; the local topic cluster is **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.3 Tradecraft: Core Principles evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 7.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Governed Intelligence Cycle and Dissemination Architecture** profile tells reviewers what evidence is strong enough for the module artifact built around **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.3.1 Tradecraft: Core Principles guide source spine: inherited keys and local citation roles Primary guide citations: [ageint237]; [ageint266]; [ageint269]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint013]; [ageint014]; [ageint015]; [ageint016]; [ageint017]; [ageint018]; [ageint005]; [ageint019]; [ageint297]; [ageint298]; [ageint305]; [ageint304]; [ageint303].

7.3.3.2 Tradecraft: Core Principles verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint237]; [ageint266].

Tier	What counts	How it is used
Source guide	[ageint237]; [ageint266]; [ageint269]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint013]; [ageint014]; [ageint015]; [ageint016]; [ageint017]; [ageint018]; [ageint005]; [ageint019]; [ageint297]; [ageint298]; [ageint305]; [ageint304]; [ageint303].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 3's source-canon section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance** and [ageint237]; [ageint266], but only directly verified source URLs are encoded as citations.

7.3.3.3 Tradecraft: Core Principles intelligence practice lens: evidence artifact and safety check Practice lens: **Structured-Judgment Lens** for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. [ageint237]; [ageint266].
Planning question: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?
Evidence artifact: analytic note with hypotheses, evidence table, confidence, and dissent fields.
Validation rule: separate raw reporting, inference, judgment, and recommendation before synthesis. Applied to **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.
Handoff contract: handoff preserves alternatives, uncertainty, caveats, and revision history for downstream modules.
Safety check: avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence.

7.3.3.4 Tradecraft: Core Principles runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 7.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	3.99	3.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Tradecraft: Core Principles to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Bounded autonomy, procurement, incident-response, and assurance studio	3.101	3.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Tradecraft: Core Principles	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Model-card, recoverability, retention, and learner-support evidence package	3.102	3.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Tradecraft: Core Principles	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Tradecraft: Historical Practice and Analytic Discipline	3.1	3.1 Tradecraft: Historical Practice and Analytic Discipline	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Operations security (OPSEC) governance	3.2	3.2 source title transformed into safe curriculum treatment; original: OPSEC: A Completed Synthetic Document-Release	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Compartmentation and need-to-know governance	3.3	3.3 source title transformed into safe curriculum treatment; original: Compartmentation: Protection without Erasing Necessary Context	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Cover identity governance literacy	3.4	3.4 source title transformed into safe curriculum treatment; original: Historical Cover Vocabulary and Limits of Public Descriptions	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Plausible Deniability: Attribution Claims and Accountability	3.5	3.5 Plausible Deniability: Attribution Claims and Accountability	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Versioned Evidence Memory without Person Tracking	3.6	3.6 Versioned Evidence Memory without Person Tracking	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Situational Awareness: Observation, Interpretation, and Uncertainty	3.7	3.7 Situational Awareness: Observation, Interpretation, and Uncertainty	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Public Intelligence Vocabulary and Glossary Error Checking	3.8	3.8 Public Intelligence Vocabulary and Glossary Error Checking	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance	3.9	3.9 Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

7.3.3.5 Tradecraft: Core Principles reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 7.

Lesson topic	Practice lens	Evidence artifact	Safety check
Tradecraft: Historical Practice and Analytic Discipline	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Operations security (OPSEC) governance	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Compartmentation and need-to-know governance	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Cover identity governance literacy	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Plausible Deniability: Attribution Claims and Accountability	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Versioned Evidence Memory without Person Tracking	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Situational Awareness: Observation, Interpretation, and Uncertainty	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Public Intelligence Vocabulary and Glossary Error Checking	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

7.3.3.6 Tradecraft: Core Principles annotated source ledger: real titles and local contribution Each source cited by this **Governed Intelligence Cycle and Dissemination Architecture** module is paired below with its real title and a one-line note on what it contributes to

Tradecraft: Historical Practice and Analytic Discipline; Operations security governance.

Source	Cited work	Curriculum annotation	Status
[ageint237]	Artificial Intelligence: An Accountability Framework for Federal Agencies and Other Entities	Official GAO AI accountability framework.	original source-guide; annotation metadata, not claim verification
[ageint266]	PROV Overview	A W3C Working Group Note from 2013 that provides an overview and roadmap for the PROV family of specifications for representing and exchanging provenance information on the web. It defines provenance as information about the entities, activities, and people involved in producing data, used to assess quality, reliability, and trustworthiness.	verified source-guide; annotation metadata, not claim verification
[ageint269]	Data on the Web Best Practices	A W3C Recommendation, "Data on the Web Best Practices," published January 31, 2017 by the Data on the Web Best Practices Working Group. It offers 35 best practices for publishing and consuming data on the Web, covering metadata, licensing and provenance, data quality, dataset versioning, persistent URIs, machine-readable formats, vocabulary reuse, access methods, preservation, and feedback.	verified source-guide; annotation metadata, not claim verification
[ageint278]	Recommendation of the Council on Public Procurement	The OECD Recommendation of the Council on Public Procurement (OECD/LEGAL/0411), a legal instrument adopted by the OECD Council in 2015 on the proposal of the Public Governance Committee. It frames public procurement as a pillar of strategic governance and service delivery and sets out principles for governments to follow.	verified source-guide; annotation metadata, not claim verification
[ageint279]	Open Contracting Data Standard	The documentation homepage for the Open Contracting Data Standard, version 1.1.5, maintained by the Open Contracting Partnership to support disclosure of government contracting data across the procurement lifecycle. It provides a common data model spanning planning, tender, award, contract, and implementation stages, along with a primer, implementation guidance, technical schemas, and validation tooling.	verified source-guide; annotation metadata, not claim verification
[ageint283]	Recommendation of the Council on Open Government	An OECD legal instrument document reproducing the Recommendation of the Council on Open Government (OECD/LEGAL/0438), adopted on 14 December 2017. It defines open government as a culture of governance promoting transparency, integrity, accountability, and stakeholder participation in support of democracy and inclusive growth.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint290]	NIST SP 800-218A: Secure Software Development Practices for Generative AI and Dual-Use Foundation Models	NIST Special Publication 800-218A (July 2024), which augments the Secure Software Development Framework with practices specific to AI model development across the software lifecycle. Produced in response to Executive Order 14110, it addresses AI model producers, developers building on those models, and acquirers of AI systems, and is designed to be used alongside NIST SP 800-218.	verified source-guide; annotation metadata, not claim verification
[ageint291]	Revised 508 Standards and 255 Guidelines	Official documentation from the U.S. Access Board on the Revised 508 Standards and 255 Guidelines for information and communication technology accessibility. It establishes mandatory accessibility requirements for federal agencies and voluntary guidelines for telecommunications manufacturers, covering hardware, software, websites, electronic documents, and support services.	verified source-guide; annotation metadata, not claim verification
[ageint294]	M-25-21: Accelerating Federal Use of AI through Innovation, Governance, and Public Trust	An April 2025 Office of Management and Budget memorandum (M-25-21) directing executive branch agencies on federal use of artificial intelligence. Issued under Executive Order 14179, it instructs agencies to accelerate adoption of AI to improve public services and government efficiency while maintaining safeguards for civil rights, civil liberties, and privacy.	verified source-guide; annotation metadata, not claim verification
[ageint013]	Intelligence Tradecraft Overview / PDF / Surveillance	This is an instructional training document hosted on Scribd that introduces the fundamentals of intelligence tradecraft, defined as the methods and skills used in intelligence operations. It covers core concepts and types of tradecraft, cover and operational security, casing and surveillance, clandestine communication, and information gathering.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint014]	Tradecraft: Covert Operative Tactics and Techniques / TRDCRFT	An educational article from TRDCRFT defining tradecraft as the techniques, strategies, and tools used by intelligence operatives to pursue objectives while maintaining secrecy and operational security. It surveys core disciplines such as surveillance and counter-surveillance, cover and disguise, technical and human intelligence work, and the field's evolution toward digital and cyber methods.	verified source-guide; annotation metadata, not claim verification
[ageint015]	Cover (intelligence gathering)	A Wikipedia article explaining the concept of cover in human intelligence and counterintelligence work, defined as the ostensible identity assumed by a covert agent. It distinguishes official cover (diplomatic channels, immunity) from non-official cover (no government acknowledgment, less protection). The article surveys historical examples of front organizations and assumed identities.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint016]	Surveillance Detection - State.gov	Place where victim can be controlled with limited avenues of escape.	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint017]	Language of Espionage / International Spy Museum	An educational glossary from the International Spy Museum, a nonprofit institution in Washington, DC, presenting an alphabetized dictionary of espionage terminology. It defines operational roles (agent, handler, case officer), intelligence disciplines such as HUMINT, SIGINT, and IMINT, major organizations (CIA, FBI, KGB, MI5, MI6, NSA), and historical equipment like the Enigma machine and U-2 aircraft.	verified source-guide; annotation metadata, not claim verification
[ageint018]	Old-school spycraft could make a comeback as AI undermines trust	A Nextgov article reporting on an essay in the CIA's Studies in Intelligence journal by RAND researcher Thomas Mulligan. It argues that as AI makes deepfakes and synthetic communications easier, trust in digital channels erodes, paradoxically increasing the value of traditional human intelligence methods.	verified source-guide; annotation metadata, not claim verification
[ageint005]	CIA: Studies in AI and Human Intelligence - SemperVerus	A blog post on SemperVerus summarizing a CIA Studies in Intelligence article, "Espionage in Our AI Future: Why Human Intelligence Still Matters" (Vol. 70, No. 1, March 2026). It argues that as AI makes technical intelligence cheaper and AI-driven fabrication more pervasive, human intelligence becomes relatively more valuable, since human specialists are needed to verify source reliability over time.	verified source-guide; annotation metadata, not claim verification
[ageint019]	Espionage in Our AI Future: Why Human Intelligence Still Matters - CSI	By Thomas Mulligan, a researcher at the RAND Corporation who served in CIA during 2008–14.	original source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint305]	DevSecOps	Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support.	original source-guide; annotation metadata, not claim verification
[ageint304]	Secure Software Development Framework (SSDF) Version 1.1: Recommendations for Mitigating the Risk of Software Vulnerabilities	NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences.	verified source-guide; annotation metadata, not claim verification

[ageint303]	Software Security in Supply Chains	An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 7; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

7.3.4 Tradecraft: Core Principles governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 7.

7.3.5 Tradecraft: Core Principles analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 3's governance-boundary section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Governed Intelligence Cycle and Dissemination Architecture** for **Tradecraft: Historical Practice and Analytic Discipline; Operations security (OPSEC) governance**. [ageint237]; [ageint266].

Curriculum topic spine: Tradecraft: Historical Practice and Analytic Discipline, **Operations security (OPSEC) governance**, **Compartmentation and need-to-know governance**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]; [Office of the Director of National Intelligence, 2026b]; [General Services Administration, Office of Management and Budget, and CDO Council, 2026]; [Privacy and Civil Liberties Oversight Board, 2026].

Conceptual depth: treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit.

Method stack: cycle mapping, priority-to-product traceability, data-lifecycle mapping, classification vocabulary review, dissemination-caveat audit, customer feedback, and oversight checkpointing.

Composability contract: requirements, data provenance, analytic judgments, markings, dissemination permissions, records obligations, and feedback remain separable artifacts.

Known failure modes: cycle theater, undocumented dissemination, classification drift, unclear release authority, stale records assumptions, and feedback loops that hide bias.

Defensive boundary: cycle and marking material remains public-source and educational; it never handles classified content, live release decisions, or source-method exposure. Applied to **Tradecraft: Historical Practice and Analytic Discipline; Operations security (OPSEC) governance**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2025a]	Official IC data-management directive for data governance, data stewardship, CDO authority, interoperability, and data lifecycle management. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026b]	Official CAPCO register for classification and control-marking vocabulary, abbreviations, portion markings, and dissemination syntax. Checked as of 2026-05-21; role: curriculum_anchor.
[General Services Administration, Office of Management and Budget, and CDO Council, 2026]	Official federal data-governance benchmark for data as a strategic asset, ethical governance, lifecycle practices, and learning culture. Checked as of 2026-05-21; role: curriculum_anchor.
[Privacy and Civil Liberties Oversight Board, 2026]	Official oversight-report library for privacy, civil-liberties, surveillance, watchlisting, facial-recognition, and redress analysis. Checked as of 2026-05-21; role: curriculum_anchor.

7.3.5.1 Tradecraft: Core Principles evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Governed Intelligence Cycle and Dissemination Architecture** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint237]; [ageint266].

7.3.6 Tradecraft: Core Principles agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 7.

AGEINT translation is bounded by the **Governed Intelligence Cycle and Dissemination Architecture** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.6.1 Tradecraft: Core Principles permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 7.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.6.2 Tradecraft: Core Principles excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint237]; [ageint266] and **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

7.3.7 Tradecraft: Core Principles governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 7.

Governance is practiced as a gate on the **Governed Intelligence Cycle and Dissemination Architecture** lane. Learners use the **Structured-Judgment Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an

agent-assisted artifact must stop for human review while using **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.7.1 Tradecraft: Core Principles governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint237]; [ageint266].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Governed Intelligence Cycle and Dissemination Architecture** failure modes and the **Structured-Judgment Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

7.3.7.2 Tradecraft: Core Principles evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Structured-Judgment Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.7.3 Tradecraft: Core Principles current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. [ageint237]; [ageint266].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_203` for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**?	Intelligence Community Directive 203: Analytic Standards; lane `source_quality_spine`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; source-quality triangulation and claim-boundary review
What does the module inherit from `official_odni_icd_204` for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_odni_icd_504` for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**?	Intelligence Community Directive 504: Intelligence Community Data Management; lane `ai_ethics_data_governance`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; Official IC data-management directive for data governance, data stewardship, CDO authority, interoperability, and data lifecycle management.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 7; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

7.3.8 Tradecraft: Core Principles assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 7.

7.3.9 Tradecraft: Core Principles assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 7.

7.3.9.1 Tradecraft: Core Principles capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance** and [ageint237]; [ageint266].

7.3.9.2 Tradecraft: Core Principles instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance** and [ageint237]; [ageint266].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

7.3.9.3 Tradecraft: Core Principles assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Tradecraft: Historical Practice and Analytic Discipline; **Operations security (OPSEC) governance**; **Compartmentation and need-to-know governance**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: separate raw reporting, inference, judgment, and recommendation before synthesis.
Cover identity governance literacy; **Plausible Deniability: Attribution Claims and Accountability**; **Versioned Evidence Memory without Person Tracking**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Situational Awareness: Observation, Interpretation, and Uncertainty; **Public Intelligence Vocabulary and Glossary Error Checking**; **Classical Tradecraft in AI Commentary: Forecasts, Not Operational Guidance**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

7.3.10 Tradecraft: Core Principles refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint237]; [ageint266] and **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**.

7.3.10.1 Tradecraft: Core Principles refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. The local signals begin with [ageint237]; [ageint266].

7.3.10.2 Tradecraft: Core Principles claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**, and the source spine for these checks begins with [ageint237]; [ageint266].

7.3.11 Tradecraft: Core Principles reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint237]; [ageint266].
Contextual source routes. For module 3's review-checklist section, the **Governed Intelligence Cycle and Dissemination Architecture** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]; [Office of the Director of National Intelligence, 2025a]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance**. [ageint237]; [ageint266].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

7.3.12 Tradecraft: Core Principles learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Tradecraft: Historical Practice and Analytic Discipline; Operations security governance** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint237]; [ageint266].

Section 2, Section 4, Section 6, Section 8

8 HUMAN INTELLIGENCE (HUMINT)

8.1 HUMAN INTELLIGENCE (HUMINT) learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 8.

8.1.1 human-source literacy and source protection discipline spine: domain question and learning focus

Navigation. Parent section: Section 8.
This unit teaches **human-source literacy and source protection**. HUMINT lessons focus on motivation literacy, validation, consent, source risk, debrief hygiene, and oversight without teaching contact handling.

8.1.2 human-source literacy and source protection source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 8.
Use guide citations for HUMINT vocabulary and official oversight anchors for source-risk, minimization, and governance claims.

8.1.3 human-source literacy and source protection practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 8.
The recurring practice artifact is a **source-risk and validation ethics worksheet** that draws on validation note, pressure-risk checklist, source-protection boundary, and oversight escalation memo. The unit keeps its learning spine explicit. Classroom packet: fictional interview summaries H1 and H2 both report a training-room closure; H1 saw a sign, H2 repeats H1, and a dated facilities card says closure starts next week. A motivation card describes H1 as eager to help.

1. Extract each reported observation, access claim, and date without retaining personal identifiers.
2. Mark H2 as dependent reporting; treat helpfulness as a motivation hypothesis, not proof of accuracy, consent, or authority.
3. Compare the summaries with the facilities card and test the alternative that the interview omitted the closure date.
4. Complete the validation worksheet: current closure is unsupported, next week's scheduled closure has documentary support, and what H1 actually saw remains unresolved. Removing H2 must not reduce the independent-source count. Do not contact or pressure a source to resolve the gap. Stop if a summary exposes sensitive details; hand a minimized discrepancy note to the instructor's source-protection reviewer.

8.1.4 human-source literacy and source protection safety boundary: accountable, synthetic, and evidence-bounded limits

No elicitation, impersonation, covert contact, or operational source-management procedures; all cases use classroom fixtures.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint238]; [ageint239].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint238]; [ageint239].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint238]; [ageint239].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint238]; [ageint239].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Collection Management and Multi-INT Requirements Discipline. Core anchors: [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Conceptual focus: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable. **Practice lens:** Requirements-to-Evidence Lens; What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit? [ageint238]; [ageint239].

8.1.5 HUMAN INTELLIGENCE (HUMINT) visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 36 and Figure 37 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 7, Section 9.

8.1.6 HUMAN INTELLIGENCE (HUMINT) module roster and source-lane inventory: citations, lanes, and learner route

Figure 36: The HUMAN INTELLIGENCE (HUMINT) module map traces the part's chapters as a linear reading sequence. In the human intelligence humint section, it lets readers compare 3 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last so the visual functions as a traceable course aid rather than an unscoped assertion.

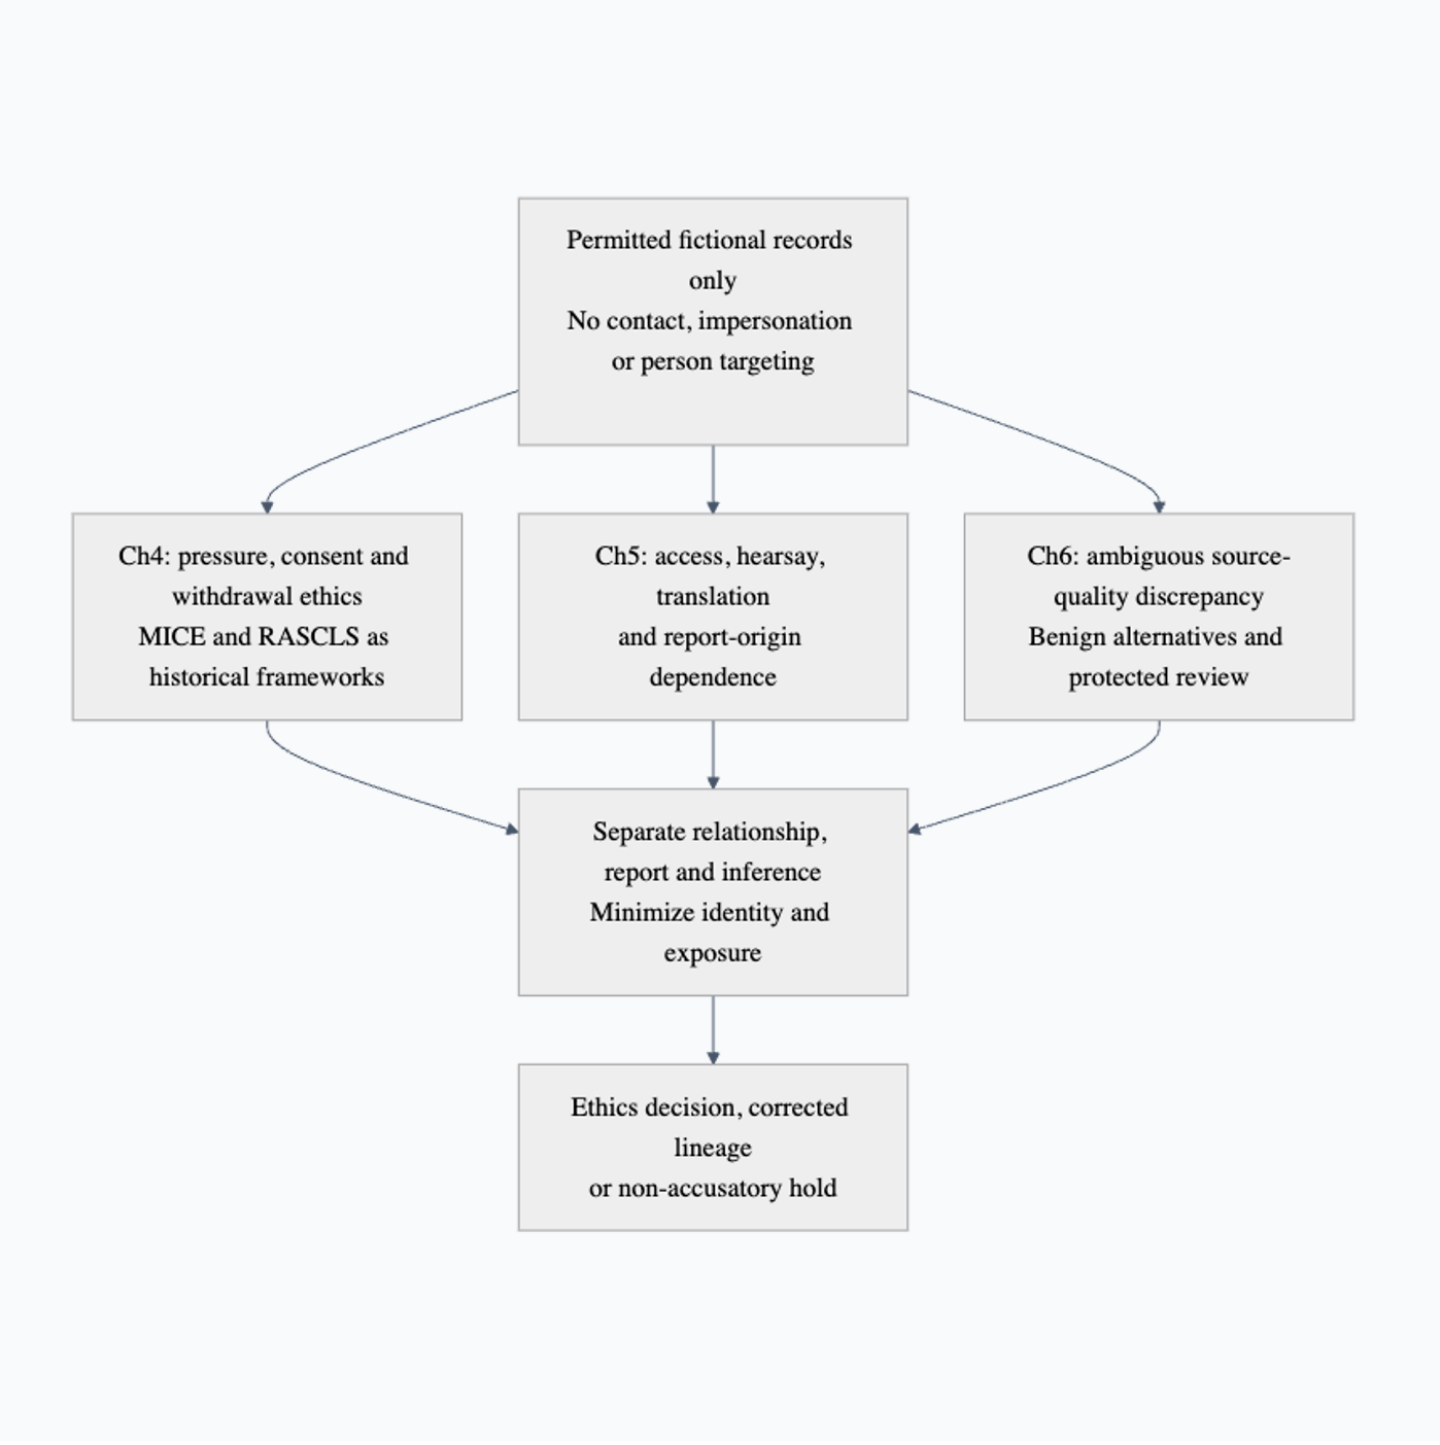

Figure 37: Educational part map, not a source-recruitment or handling sequence. Historical human-source roles do not imply software-agent delegation. Relationship trust, a screening signal and a completed review cannot establish report accuracy or deception; missing permission or potentially harmful personal inference requires a hold.

Module	Section reference	Source spine
Agent Recruitment	Section 9	[ageint238]; [ageint239]; [ageint240]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint020]; [ageint021]; [ageint298]; [ageint297]; [ageint022]; [ageint023]; [Neequaye and Granhag, 2024]; [ageint004].
Agent Handling and Management	Section 10	[ageint239]; [ageint240]; [ageint241]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint025]; [ageint029]; [ageint004]; [ageint026]; [ageint016]; [ageint027]; [ageint028]; [ageint030]; [ageint031]; [ageint032].
Source Protection and CI Integration	Section 11	[ageint238]; [ageint241]; [ageint266]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint307]; [ageint305]; [ageint304]; [ageint029]; [ageint033]; [ageint019]; [ageint034].

9 Agent Recruitment

9.0.1 Agent Recruitment figures and course links: visual evidence, source flow, and navigation

The module uses Figure 38 and Figure 36 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 8, Section 10.
This module teaches the **Collection Management and Multi-INT Requirements Discipline** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint239].

9.1 Collection Management and Multi-INT Requirements Discipline frame for Agent Recruitment: source context, topic focus, and reader task

Navigation. Parent section: Section 9.

9.1.1 Agent Recruitment orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 9.

9.1.2 Agent Recruitment conceptual primer: source context, core model, and reader task

This chapter teaches collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.
The central distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Core topics include **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy; Supplied-Record Review: Access Claims without Targeting People**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint239].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **MICE Framework for recruitment-risk literacy** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

9.1.3 Agent Recruitment learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 9.

- Connect **MICE Framework for recruitment-risk literacy and RASCLS tradecraft vocabulary for recruitment-risk literacy** to **Collection Management and Multi-INT Requirements Discipline** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures.

9.1.4 Agent Recruitment core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 9.

Term	Working definition
Priority	the relative importance of an intelligence question
Source discipline	a broad evidence channel such as HUMINT, SIGINT, GEOINT, OSINT, or FININT
Minimization	the rule that limits acquisition, retention, or use of unnecessary information
Source protection	the duty to reduce risk to people, methods, and sensitive relationships
Evaluation	the feedback step that tests whether the evidence satisfied the requirement
Gray-zone indicator	an observed feature potentially relevant to ambiguous coercion; neither coercive intent nor an armed-conflict threshold follows from the label
Proxy pattern	a relationship pattern that may motivate a sponsorship hypothesis but does not establish sponsorship, direction, or operational control

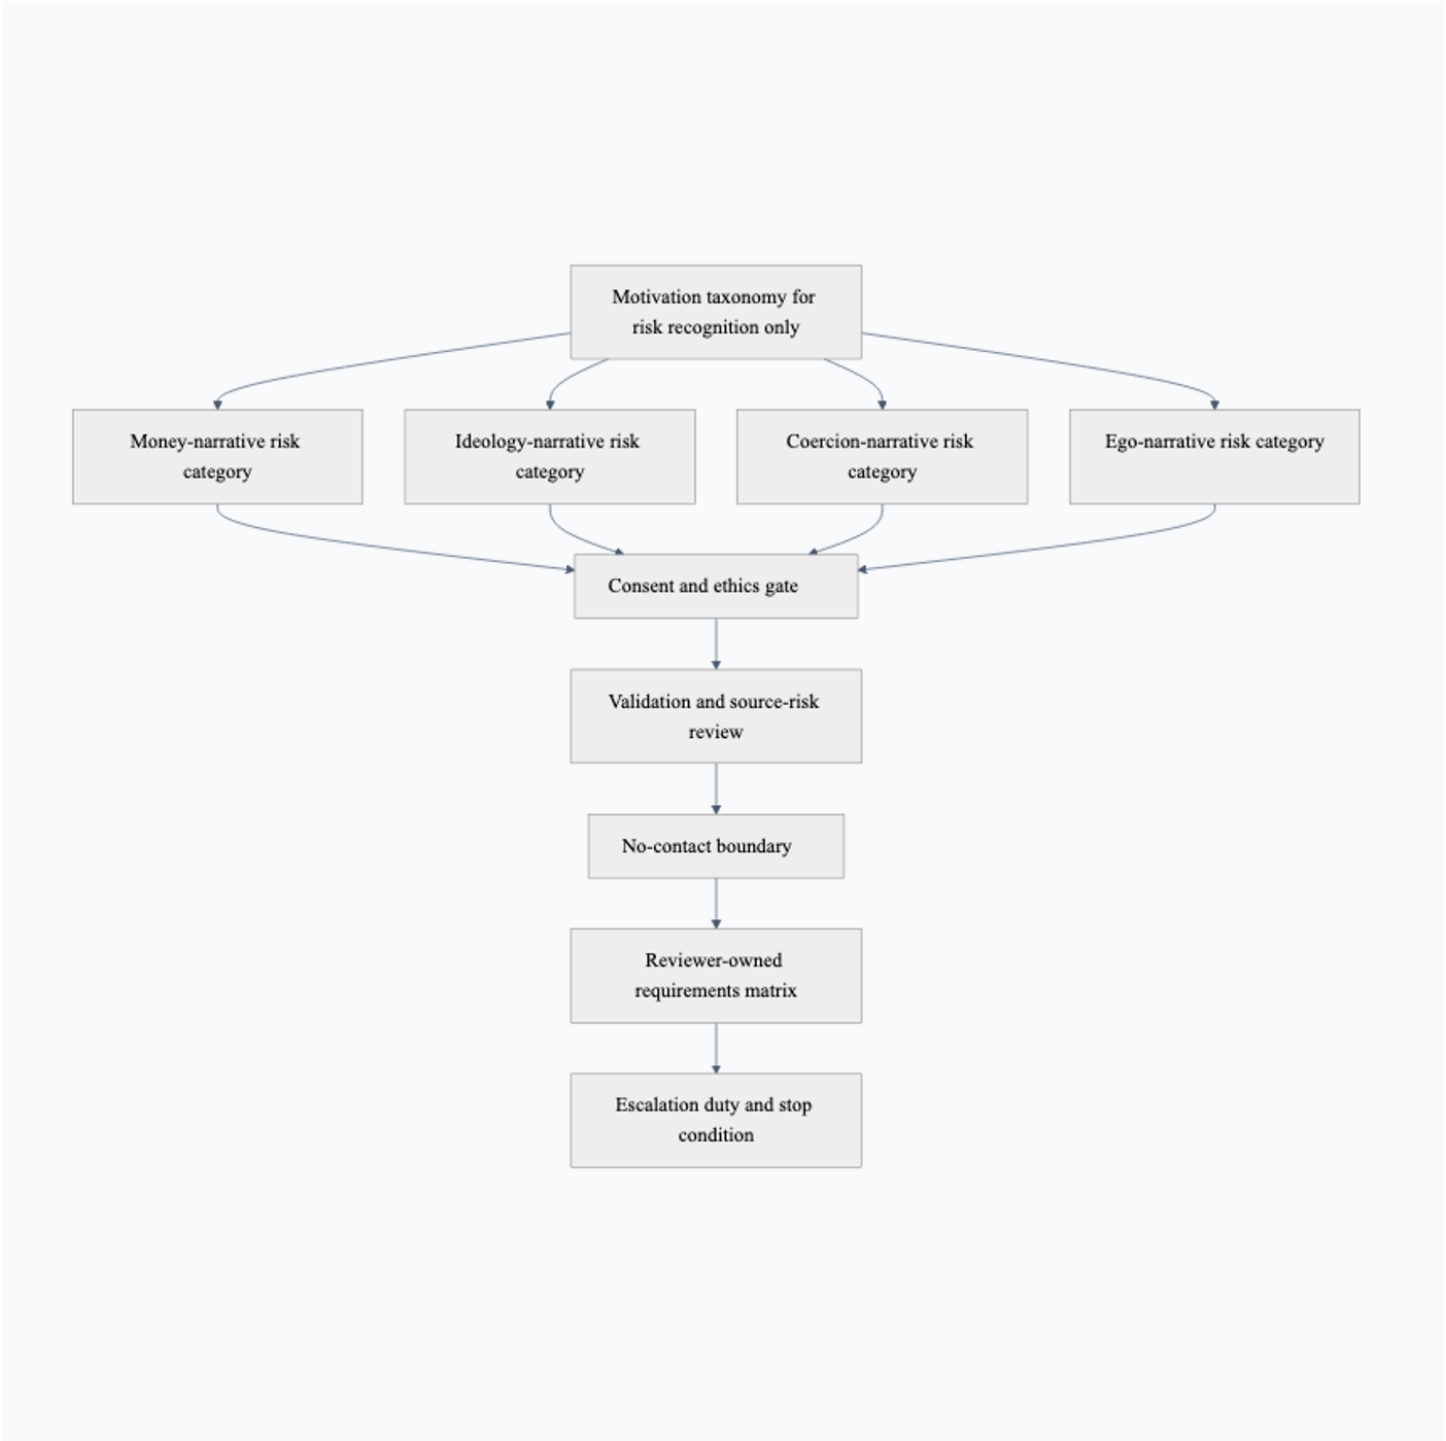

Figure 38: A study taxonomy for reading recruitment-risk literature as ethics, consent, and validation governance rather than as persuasion design. The captioned view belongs to the human intelligence humint / agent recruitment section and should be read as a map of Motivation taxonomy for risk recognition only, Money-narrative risk category, Ideology-narrative risk category, and Coercion-narrative risk category, not as a capability score or live-task instruction.

9.2 Requirements-to-Evidence Lens path for Agent Recruitment: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 9.

9.2.1 Agent Recruitment practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 9.

9.2.2 Agent Recruitment topic lessons: source-backed concepts and transfer tasks

Agent Recruitment builds collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The sequence opens with **MICE Framework for recruitment-risk literacy**, **RASCLS tradecraft vocabulary for recruitment-risk literacy**, **Supplied-Record Review: Access Claims without Targeting People** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 36; module overview Section 9; curriculum atlas Section 2.

Contextual source routes. For module 4's topic-lessons section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

9.2.2.1 Lesson 1: MICE Framework for recruitment-risk literacy

Concept. MICE Framework for recruitment-risk literacy — MICE names money, ideology, coercion/compromise, and ego as a historical motivation taxonomy. Use it to critique recruitment-risk narratives and consent boundaries, not to predict an individual's motives or design recruitment.

Worked reasoning and limits. MICE abbreviates Money, Ideology, Coercion/Compromise, and Ego in historical/practitioner discussion of recruitment. It is descriptive vocabulary, not a validated taxonomy that assigns a person's motive, predicts cooperation, or establishes report credibility. In a synthetic message, accepting reimbursement could reflect an ordinary expense, convenience, or many other explanations; it does not establish a 'money motive' or a vulnerability to exploit. Compare documentary claims about a historical case without scoring, profiling, contacting, or recruiting anyone.

Why it matters. MICE Framework matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; confusing motivation literacy with contact authorization is a common failure.

Source support. Inherited source-guide context for **MICE Framework for recruitment-risk literacy**: [ageint020] and [ageint021]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **MICE Framework**, inspect the original passages. Curriculum annotation for [ageint020]: A publisher and training-organization page from HSM Training and Consultancy (London) promoting the book The Human Source Management System, a guide of over 500 pages that applies social psychology to the management of confidential informants. The site states the book draws on research and practitioner interviews and is used by law enforcement and intelligence bodies across more than 40 countries. Curriculum annotation for [ageint021]: A July 2019 story from The World (PRX public radio) about a project led by Michael Weiss to translate previously unpublished Soviet-era KGB training manuals from the 1970s-80s into English. The article describes how the manuals cover intelligence methods such as agent recruitment, psychological manipulation, and disinformation detection, and notes the materials remain relevant because related methods persist in modern Russian services. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must note the motivation descriptor, the bounded claim about **MICE Framework**, the consent caveat, the uncertainty note, the no-contact boundary, and the reviewer who owns escalation duties. Shape the same topic work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **MICE Framework**: that a motivation taxonomy is a recruitment checklist.

Transfer task. Transfer **MICE Framework** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

9.2.2.2 Lesson 2: RASCLS tradecraft vocabulary for recruitment-risk literacy

Concept. RASCLS tradecraft vocabulary for recruitment-risk literacy — RASCLS names reciprocity, authority, scarcity, commitment, liking, and social proof as historical influence vocabulary, whereas MICE classifies money, ideology, coercion/compromise, and ego. Neither mnemonic validates person-level motive prediction or authorizes contact, profiling, or persuasion.

Worked reasoning and limits. RASCLS names Reciprocity, Authority, Scarcity, Commitment, Liking, and Social Proof; unlike MICE's motive categories, it organizes proposed social-influence mechanisms in a practitioner framework. Burkett's public essay is the provenance of the MICE-to-RASCLS comparison, not an empirical demonstration that these labels reliably predict individual behavior [Burkett, 2013]. A fictional reference to an official title can be ordinary identification rather than coercive authority, and friendly wording does not establish commitment. The diagnostic answer expands both mnemonics, distinguishes their organizing purposes, and refuses person-level predictions or operational scripts; inherited ICD citations support analytic discipline, not the framework's definitions.

Why it matters. RASCLS tradecraft vocabulary connects classroom vocabulary to Collection Management and Multi-INT Requirements Discipline practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **RASCLS tradecraft vocabulary for recruitment-risk literacy**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **RASCLS tradecraft vocabulary**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **RASCLS tradecraft vocabulary**, build a RASCLS versus MICE vocabulary comparison with historical context, consent boundary, and unsupported motive inference. Shape **RASCLS tradecraft vocabulary** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **RASCLS tradecraft vocabulary**: that RASCLS labels predict an individual's motives or authorize persuasion or contact.

Transfer task. Transfer **RASCLS tradecraft vocabulary** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

9.2.2.3 Lesson 3: Supplied-Record Review: Access Claims without Targeting People

Concept. Supplied-Record Review: Access Claims without Targeting People is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Access is a claim about a source's opportunity to know particular information, not a personality trait or proof of truth. For a fictional supplied record saying 'I heard the room changed,' the supported basis is hearsay, not firsthand access to scheduling decisions. A learner should identify the missing origin and date rather than infer motive from a biography, seek real identities, or initiate contact. The inherited operational heading remains provenance; the classroom substitution is evidence-basis review only.

Why it matters. Supplied-Record Review matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Supplied-Record Review: Access Claims without Targeting People**: [ageint020] and [ageint021]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Supplied-Record Review**, inspect the original passages. Curriculum annotation for [ageint020]: A publisher and training-organization page from HSM Training and Consultancy (London) promoting the book The Human Source Management System, a guide of over 500 pages that applies social psychology to the management of confidential informants. The site states the book draws on research and practitioner interviews and is used by law enforcement and intelligence bodies across more than 40 countries. Curriculum annotation for [ageint021]: A July 2019 story from The World (PRX public radio) about a project led by Michael Weiss to translate previously unpublished Soviet-era KGB training manuals from the 1970s-80s into English. The article describes how the manuals cover intelligence methods such as agent recruitment, psychological manipulation, and disinformation detection, and notes the materials remain relevant because related methods persist in modern Russian services. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Supplied-Record Review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Supplied-Record Review**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Supplied-Record Review** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Supplied-Record Review: Access Claims without Targeting People can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **Supplied-Record Review** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.2.4 Lesson 4: Development Claims versus Consent, Scope, and Welfare

Concept. Development Claims versus Consent, Scope, and Welfare is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A relationship's duration or familiarity does not establish freely given consent to every later use of information. Separate the supplied purpose, permitted reuse, stated withdrawal conditions, and welfare issue from assumptions about loyalty or willingness. Where a fictional record permits discussion in class but says nothing about publication, publication remains on hold; repeated engagement does not fill the permission gap. Historical doctrine is studied as attributed context, not enacted as a development operation or used to discover someone's vulnerabilities.

Why it matters. Analysts use **Development Claims versus Consent, Scope, and Welfare** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Development Claims versus Consent, Scope, and Welfare**: [ageint020] and [ageint021]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Development Claims versus Consent, Scope, and Welfare**, inspect the original passages. Curriculum annotation for [ageint020]: A publisher and training-organization page from HSM Training and Consultancy (London) promoting the book The Human Source Management System, a guide of over 500 pages that applies social psychology to the management of confidential informants. The site states the book draws on research and practitioner interviews and is used by law enforcement and intelligence bodies across more than 40 countries. Curriculum annotation for [ageint021]: A July 2019 story from The World (PRX public radio) about a project led by Michael Weiss to translate previously unpublished Soviet-era KGB training manuals from the 1970s-80s into English. The article describes how the manuals cover intelligence methods such as agent recruitment, psychological manipulation, and disinformation detection, and notes the materials remain relevant because related methods persist in modern Russian services. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Development Claims versus Consent, Scope, and Welfare**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Development Claims versus Consent Scope**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Development Claims versus Consent, Scope, and Welfare is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Development Claims versus Consent, Scope, and Welfare** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.2.5 Lesson 5: Recognizing Pressure in Supplied Messages: A Completed Ethics

Concept. Recognizing Pressure in Supplied Messages: A Completed Ethics is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Completed synthetic case: instructor-provided message A links a fictional volunteer's access to an unrelated benefit, while message B is an ordinary optional timetable reminder. The review records A's conditional pressure as an observed wording feature,

not proof of its author's hidden motive, and records B as insufficient evidence of recruitment or coercion. A later supplied withdrawal notice removes permission for reusing the volunteer's example: the reviewer replaces identifiers with case labels, holds further reuse, and refers the minimized record to the instructor/authorized oversight role. The final result is a welfare-and-permission hold with unresolved intent, not a recruitment script, allegation, or instruction to contact anyone; the instructor must resolve the permitted disposition before reuse.

Why it matters. Recognizing Pressure in Supplied Messages matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Recognizing Pressure in Supplied Messages: A Completed Ethics**: [ageint020]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Recognizing Pressure in Supplied Messages**, inspect the original passages. Curriculum annotation for [ageint020]: A publisher and training-organization page from HSM Training and Consultancy (London) promoting the book The Human Source Management System, a guide of over 500 pages that applies social psychology to the management of confidential informants. The site states the book draws on research and practitioner interviews and is used by law enforcement and intelligence bodies across more than 40 countries. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Recognizing Pressure in Supplied Messages**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Recognizing Pressure in Supplied Messages**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Recognizing Pressure in Supplied Messages** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Recognizing Pressure in Supplied Messages: A Completed Ethics establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Recognizing Pressure in Supplied Messages** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.2.6 Lesson 6: Declassified source-protection and institutional-control case study

Concept. Declassified source-protection and institutional-control case study studies the declassified record for institutional lessons about source protection, oversight, and the danger of translating historical methods into current practice.

Worked reasoning and limits. A translated historical doctrine text is evidence of what an identifiable document says only when its original date, custody, translation, and editorial scope are established. Prescriptive claims in that document are not proof that a technique worked, was universal practice, or applies to present people. Compare the original's status, translator/editor, and omissions before extracting a bounded institutional or ethical lesson. Discussion remains historical and critical: no manipulation sequence, elicitation method, or reconstruction of recruitment practice is authorized.

Why it matters. Declassified source-protection connects classroom vocabulary to Collection Management and Multi-INT Requirements Discipline practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Declassified source-protection and institutional-control case study**: [ageint021] and [ageint022]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Declassified source-protection**, inspect the original passages. Curriculum annotation for [ageint021]: A July 2019 story from The World (PRX public radio) about a project led by Michael Weiss to translate previously unpublished Soviet-era KGB training manuals from the 1970s-80s into English. The article describes how the manuals cover intelligence methods such as agent recruitment, psychological manipulation, and disinformation detection, and notes the materials remain relevant because related methods persist in modern Russian services. Curriculum annotation for [ageint022]: An article from The Interpreter, a publication focused on Russian affairs and disinformation, announcing a project to translate, analyze, and publish previously unpublished Soviet KGB training documents. It summarizes a set of newly obtained manuals spanning several decades and describes the topics they cover, including operational terminology, agent classification, information-gathering methods, recruitment and vetting procedures, and counterintelligence concerns. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Declassified source-protection**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must cite the declassified source descriptor, the bounded lesson about **Declassified source-protection and institutional-control case**, the redaction caveat, the attribution uncertainty, the protected-detail boundary, and the reviewer who clears release. Shape **Declassified source-protection** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a source identity is safe to discuss once the operation is historical, when protection obligations and re-identification risk outlast the case itself.

Transfer task. Apply this module's safe boundary for **Declassified source-protection** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

9.2.2.7 Lesson 7: Digital Contact Claims: Channel Labels Are Not Evidence of Intent

Concept. Digital Contact Claims: Channel Labels Are Not Evidence of Intent is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A platform name, encrypted channel, or payment technology identifies a communication or transaction context, not recruitment, criminality, sponsorship, or a user's motive. The inherited thesis concerns a defined digital-recruitment question; its title cannot support universal claims about the platforms listed in the source heading. In a supplied fictional screenshot description, missing origin, date, or conversation context is an evidence gap, not permission to find the account owner or inspect a real network. Assess the artifact's stated content and uncertainty without profiling, searching, messaging, or joining groups.

Why it matters. Digital Contact Claims connects classroom vocabulary to Collection Management and Multi-INT Requirements Discipline practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Digital Contact Claims: Channel Labels Are Not Evidence of Intent**: [ageint023]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Digital Contact Claims**, inspect the original passages. Curriculum annotation for [ageint023]: A 2024 International Master in Security, Intelligence and Strategic Studies thesis (Glasgow, Trento, Charles University) titled 'Human Intelligence in the Modern Era: The

Impact of Digital Technology on Clandestine Agent Recruitment.' It uses a literature-based analysis plus three case studies to compare traditional human-source practices with technology-enabled approaches. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Digital Contact Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Digital Contact Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Digital Contact Claims** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Digital Contact Claims: Channel Labels Are Not Evidence of Intent can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **Digital Contact Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.2.8 Lesson 8: Shared-Experience Experiment: Closeness Is Not Commitment Concept. Shared-Experience Experiment: Closeness Is Not Commitment

Shared-Experience Experiment: Closeness Is Not Commitment is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The directly inspected registered report tested a 2×2 shared-experience/social-connection design with final N=182 after 18 attention-check exclusions; commitment was a monetary-investment proxy for a later meeting, not actual long-term source reliability [Neequaye and Granhag, 2024]. Neither preregistered commitment hypothesis was supported: shared attention b=0.45, 95% CI [−2.16, 3.06], p=.734; the social-connection comparison b=0.91, 95% CI [−2.78, 4.60], p=.626. Perceived closeness/social connection increased, but this did not establish increased commitment; the authors discuss the shortfall from planned N=200 and limitations of the role-play/investment proxy. Model-answer correction: replace 'rapport therefore commitment therefore truth' with 'interpersonal ratings changed; the proposed commitment extrapolations were unsupported in this study'; the null results do not prove no effect in every setting. This is research-literacy analysis only, with no replication of recruitment scripts or real-person exercise.

Why it matters. Without explicit treatment of **Shared-Experience Experiment**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **Shared-Experience Experiment: Closeness Is Not Commitment**: [Neequaye and Granhag, 2024]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Shared-Experience Experiment**, inspect the original passages. Curriculum annotation for [Neequaye and Granhag, 2024]: A Stage 2 registered report in Legal and Criminological Psychology 29(1), 48–64 (February 2024), DOI 10.1111/lcrp.12251. The final analyzed sample was 182 after attention-check exclusions. Neither preregistered commitment hypothesis was supported: greater felt closeness and perceived social connection did not establish greater commitment under the study's monetary-investment proxy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Shared-Experience Experiment**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Shared-Experience Experiment**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Shared-Experience Experiment** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Shared-Experience Experiment: Closeness Is Not Commitment is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Shared-Experience Experiment** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.2.9 Lesson 9: AI Recruitment-Cost Claims: An Unverified Forecast Concept. AI Recruitment-Cost Claims: An Unverified Forecast

AI Recruitment-Cost Claims: An Unverified Forecast reads recruitment doctrine as risk literacy: pressure, consent, validation, and the line that blocks operational contact.

Worked reasoning and limits. The inherited podcast/commentary does not establish measured reductions in recruitment cost or increased effectiveness. Producing text cheaply is not equivalent to lawful access, credible information, sustained cooperation, or lower total review and welfare costs. A comparative claim would need defined tasks, a full cost boundary, independent outcomes, and harms—not merely faster message generation. Retain the proposed mechanism as attributed conjecture and do not produce persuasive messages, personality targeting, or operational experiments.

Why it matters. AI Recruitment-Cost Claims matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; confusing motivation literacy with contact authorization is a common failure.

Source support. Inherited source-guide context for **AI Recruitment-Cost Claims: An Unverified Forecast**: [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **AI Recruitment-Cost Claims**, inspect the original passages. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI Recruitment-Cost Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must note the motivation descriptor, the bounded claim about **AI Recruitment-Cost Claims**, the consent caveat, the uncertainty note, the no-contact boundary, and the reviewer who owns escalation duties. Shape **AI Recruitment-Cost Claims** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **AI Recruitment-Cost Claims**: that motivation literacy is contact authorization.

Transfer task. Apply this module's safe boundary for **AI Recruitment-Cost Claims** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

9.2.2.10 Lesson 10: Human-Source Ethics: Authority, Consent, Withdrawal, and Protection Concept. Human-Source Ethics: Authority, Consent, Withdrawal, and Protection is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Authority to conduct a real activity, a person's consent, protection duties, and permission to reuse a report are separate questions; none can be inferred from rapport or a classroom assignment. Analytic standards do not confer recruitment powers, and a foreign or historical example is not a present legal exemption. For the supplied withdrawal case, preserve only the authorized minimized review record, hold reuse, and route the unresolved retention/disposition question to the instructor rather than inventing deletion or publication permission. A critical error is treating agreement under pressure, silence, or prior participation as continuing consent.

Why it matters. Human-Source Ethics matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Human-Source Ethics: Authority, Consent, Withdrawal, and Protection**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Human-Source Ethics**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Human-Source Ethics**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Human-Source Ethics**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Human-Source Ethics** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Human-Source Ethics: Authority, Consent, Withdrawal, and Protection replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Human-Source Ethics** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

9.2.3 Agent Recruitment worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic policy cell compares public indicators of hybrid pressure against an approved collection plan for a benign border-disruption exercise. [ageint238]; [ageint239].

Contextual source routes. For module 4's worked-example section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **human-source literacy and source protection**. Learners use a **source-risk and validation ethics worksheet** and keep this boundary visible: No elicitation, impersonation, covert contact, or operational source-management procedures; all cases use classroom fixtures.

Frame. The classroom question centers on **MICE Framework for recruitment-risk literacy**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **MICE Framework for recruitment-risk literacy** scenario, use a fictional freight-delay notice, a weather bulletin, interview H1 reporting the delay and H2 repeating H1, two toy signals absent during receiver downtime, and a scope card permitting only these supplied records. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **MICE Framework for recruitment-risk literacy**, students first rank the question about disruption above the unsupported sponsorship allegation; then match each gap to a source discipline without tasking it, distinguish interview access and motivation from accuracy, and separate signal absence from collection authority; remove H2 and compare a second toy signal lost during downtime as controls. Stop any proposed contact or interception and send missing authority or evidence questions to the instructor. Pause whenever an inference about MICE Framework for recruitment-risk literacy appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a requirements matrix recording disruption reports but unresolved cause and sponsorship, one underlying interview account rather than two independent sources, and an uninterpretable transmitter state during receiver downtime; no human contact, expanded collection, or signal observation confers authority Retain it as the **source-risk and validation ethics worksheet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **MICE Framework for recruitment-risk literacy** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to requirements decomposition and source-discipline fit, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **MICE Framework for recruitment-risk literacy** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

9.2.4 Agent Recruitment practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

Contextual source routes. For module 4's practice-sequence section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare MICE Framework for recruitment-risk literacy, RASCLS tradecraft vocabulary for recruitment-risk literacy, Supplied-Record Review: Access Claims without Targeting People; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Collection Management and Multi-INT Requirements Discipline** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for MICE Framework for recruitment-risk literacy: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the source-risk and validation ethics worksheet fields for MICE Framework for recruitment-risk literacy.	Unit profile note.	Evidence artifacts include validation note, pressure-risk checklist.
4. Challenge	Test the misconception that a motivation taxonomy is a recruitment checklist.	Failure-mode note.	The artifact applies the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

9.2.4.1 Agent Recruitment instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. [ageint238]; [ageint239].

9.2.4.2 Agent Recruitment extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 9. Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.2.5 Agent Recruitment knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 9.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **MICE Framework for recruitment-risk literacy**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **MICE Framework for recruitment-risk literacy** to the final topic, **Human-Source Ethics: Authority, Consent, Withdrawal, and Protection**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Collection Management and Multi-INT Requirements Discipline** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which gray-zone indicator changes the least-intrusive source choice without crossing into operational tasking?
5. Correct this misconception: that a motivation taxonomy is a recruitment checklist.

9.2.5.1 Agent Recruitment answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **MICE Framework for recruitment-risk literacy** without source evidence, uncertainty, or a safe transfer task.

9.3 Agent Recruitment assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 9.

9.3.1 Agent Recruitment evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 9.

9.3.2 Agent Recruitment transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 9.

9.3.2.1 Agent Recruitment lineage and source tradition: profile, concepts, and first anchors This sits in the **Collection Management and Multi-INT Requirements Discipline** lineage: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. [ageint238]; [ageint239].

9.3.2.2 Agent Recruitment working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 9.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**, with provenance and reviewability throughout.

9.3.2.3 Agent Recruitment knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** accountable requirements, source-discipline choices, minimization rules, source-risk notes, and evaluation criteria. [ageint238]; [ageint239].
- **Transforms:** priority mapping, source-discipline fit, least-intrusive evidence selection, and feedback review.
- **Outputs:** requirements matrix, collection-limit note, source-quality card, and gap list.
- **Failure modes:** recruitment or interception drift, over-collection, weak minimization, and source exposure.

9.3.2.4 Agent Recruitment transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 9.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.
- **Evidence contract:** keep the **Collection Management and Multi-INT Requirements Discipline** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as requirements matrix, collection-limit note, source-quality card, and gap list that another reviewer can audit.

9.3.2.5 Agent Recruitment profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 9.

The matched profile emphasizes requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. The method stack is priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop; the local topic cluster is **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.3 Agent Recruitment evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 9.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Collection Management and Multi-INT Requirements Discipline** profile tells reviewers what evidence is strong enough for the module artifact built around **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.3.1 Agent Recruitment guide source spine: inherited keys and local citation roles Primary guide citations: [ageint238]; [ageint239]; [ageint240]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint020]; [ageint021]; [ageint298]; [ageint297]; [ageint022]; [ageint023]; [Neequaye and Granhag, 2024]; [ageint004].

9.3.3.2 Agent Recruitment verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint238]; [ageint239].

Tier	What counts	How it is used
Source guide	[ageint238]; [ageint239]; [ageint240]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint020]; [ageint021]; [ageint298]; [ageint297]; [ageint022]; [ageint023]; [Neequaye and Granhag, 2024]; [ageint004].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 4's source-canon section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy** and [ageint238]; [ageint239], but only directly verified source URLs are encoded as citations.

9.3.3.3 Agent Recruitment intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. [ageint238]; [ageint239].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

9.3.3.4 Agent Recruitment runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 9.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	4.99	4.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Agent Recruitment to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	4.101	4.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Agent Recruitment	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	4.102	4.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Agent Recruitment	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
MICE Framework for recruitment-risk literacy	4.1	4.1 source title transformed into safe curriculum treatment; original: MICE: Historical Motivation Vocabulary and Its Limits	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check

9.3.3.6 Agent Recruitment annotated source ledger: real titles and local contribution Each source cited by this **Collection Management and Multi-INT Requirements Discipline** module is paired below with its real title and a one-line note on what it contributes to **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

Source	Cited work	Curriculum annotation	Status
[ageint238]	Recommendation on the Ethics of Artificial Intelligence	The official UNESCO page for the Recommendation on the Ethics of Artificial Intelligence, the first global standard-setting instrument on AI ethics, adopted in 2021 and applicable to all 194 member states. It outlines four core values, including human rights protection and environmental flourishing, and ten guiding principles such as proportionality, privacy, transparency, and fairness.	verified source-guide; annotation metadata, not claim verification
[ageint239]	Digital Space and Human Rights	Official OHCHR digital rights portal.	original source-guide; annotation metadata, not claim verification
[ageint240]	The Right to Privacy in the Digital Age	The Office of the High Commissioner for Human Rights (OHCHR) hub page on the right to privacy in the digital age. It addresses how data-intensive technologies, particularly artificial intelligence, create risks for privacy, autonomy, and human dignity, and curates international standards, reports, and expert consultations.	verified source-guide; annotation metadata, not claim verification
[ageint280]	NIST SP 800-61 Rev. 3: Incident Response Recommendations and Considerations for Cybersecurity Risk Management	NIST SP 800-61 Rev. 3, published April 2025, integrates incident response guidance into broader cybersecurity risk management aligned with the NIST Cybersecurity Framework 2.0, superseding the 2012 Rev. 2. The publication addresses cyber threat information sharing, incident handling and management practices, and procedures for detecting, responding to, and recovering from security incidents.	verified source-guide; annotation metadata, not claim verification
[ageint281]	Artificial Intelligence Cybersecurity Challenges	An ENISA (European Union Agency for Cybersecurity) report published December 15, 2020 mapping the cybersecurity challenges of artificial intelligence. It defines AI scope through a lifecycle approach, identifies the assets requiring protection within AI ecosystems, and develops a threat taxonomy classified across lifecycle stages and asset categories.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint282]	AI Research: Security and Resilience	A NIST page on AI research focused on security and resilience, framing these as core characteristics of trustworthy AI under the NIST AI Risk Management Framework.	verified source-guide; annotation metadata, not claim verification
[ageint292]	Assessing Risks and Impacts of AI (ARIA): Pilot Evaluation Report	The ARIA 0.1 pilot evaluation report documents NIST's methodology for systematically assessing AI applications for risks and societal impacts, using a multi-layered evaluation approach across five participating organizations and seven submitted AI applications. The pilot employed three evaluation scenarios and three testing levels: model testing, red teaming, and field testing, supplemented by dialogue annotation, tester questionnaires, and structured measurement trees.	verified source-guide; annotation metadata, not claim verification
[ageint295]	M-25-22: Driving Efficient Acquisition of Artificial Intelligence in Government	OMB Memorandum M-25-22 (April 3, 2025), Driving Efficient Acquisition of Artificial Intelligence in Government, issued under Executive Order 13960 and related directives. It provides guidance to federal agencies for acquiring effective and trustworthy AI in a timely, cost-effective manner, and rescinds and replaces earlier memorandum M-24-18.	verified source-guide; annotation metadata, not claim verification
[ageint296]	Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile	NIST AI 600-1, the Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile, a cross-sectoral companion resource to the NIST AI RMF 1.0 issued pursuant to Executive Order 14110. It identifies risks that are unique to or amplified by generative AI and organizes suggested actions for managing those risks, mapped to the AI RMF functions.	verified source-guide; annotation metadata, not claim verification
[ageint020]	The Human Source Management System (Confidential Informant	A publisher and training-organization page from HSM Training and Consultancy (London) promoting the book The Human Source Management System, a guide of over 500 pages that applies social psychology to the management of confidential informants. The site states the book draws on research and practitioner interviews and is used by law enforcement and intelligence bodies across more than 40 countries.	verified source-guide; annotation metadata, not claim verification
[ageint021]	Learn how to be a spy from previously unpublished KGB training	A July 2019 story from The World (PRX public radio) about a project led by Michael Weiss to translate previously unpublished Soviet-era KGB training manuals from the 1970s-80s into English. The article describes how the manuals cover intelligence methods such as agent recruitment, psychological manipulation, and disinformation detection, and notes the materials remain relevant because related methods persist in modern Russian services.	verified source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint022]	Summaries of Newly Obtained KGB Training Manuals - The Interpreter	An article from The Interpreter, a publication focused on Russian affairs and disinformation, announcing a project to translate, analyze, and publish previously unpublished Soviet KGB training documents. It summarizes a set of newly obtained manuals spanning several decades and describes the topics they cover, including operational terminology, agent classification, information-gathering methods, recruitment and vetting procedures, and counterintelligence concerns.	verified source-guide; annotation metadata, not claim verification
[ageint023]	The Impact of Digital Technology on Clandestine Agent Recruitment	A 2024 International Master in Security, Intelligence and Strategic Studies thesis (Glasgow, Trento, Charles University) titled 'Human Intelligence in the Modern Era: The Impact of Digital Technology on Clandestine Agent Recruitment.' It uses a literature-based analysis plus three case studies to compare traditional human-source practices with technology-enabled approaches.	verified source-guide; annotation metadata, not claim verification
[Neequaye and Granhag, 2024]	Using shared experiences to recruit committed human intelligence	A Stage 2 registered report in Legal and Criminological Psychology 29(1), 48–64 (February 2024), DOI 10.1111/lcrp.12251. The final analyzed sample was 182 after attention-check exclusions. Neither preregistered commitment hypothesis was supported: greater felt closeness and perceived social connection did not establish greater commitment under the study's monetary-investment proxy.	verified source-guide; annotation metadata, not claim verification
[ageint004]	AI Won't Replace Spies—It Will Make Them More Powerful Than Ever	Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 9; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

9.3.4 Agent Recruitment governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 9.

9.3.5 Agent Recruitment analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 4's governance-boundary section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Collection Management and Multi-INT Requirements Discipline** for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. [ageint238]; [ageint239].

Curriculum topic spine: MICE Framework for recruitment-risk literacy, **RASCLS tradecraft vocabulary for recruitment-risk literacy**, **Supplied-Record Review: Access Claims without Targeting People**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [National Archives and Records Administration, 1981]; [National Security Agency, 2026d]; [Office of the Director of National Intelligence, 2026d].

Conceptual depth: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit.

Method stack: priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop.

Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable.

Known failure modes: opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority.

Defensive boundary: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures. Applied to **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Joint Chiefs of Staff, 2026]	Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[National Security Agency, 2026d]	Official NSA public explanation of FISA oversight for signals intelligence collection governed by statutory and court-authorized controls. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.

9.3.5.1 Agent Recruitment evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Collection Management and Multi-INT Requirements Discipline** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint238]; [ageint239].

9.3.6 Agent Recruitment agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 9.

AGEINT translation is bounded by the **Collection Management and Multi-INT Requirements Discipline** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.6.1 Agent Recruitment permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 9.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.6.2 Agent Recruitment excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint238]; [ageint239] and **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

9.3.7 Agent Recruitment governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 9.
Governance is practiced as a gate on the **Collection Management and Multi-INT Requirements Discipline** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.7.1 Agent Recruitment governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint238]; [ageint239].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Collection Management and Multi-INT Requirements Discipline** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

9.3.7.2 Agent Recruitment evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.7.3 Agent Recruitment current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. [ageint238]; [ageint239].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_204` for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_joint_pub_2_0` for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**?	JP 2-0: Joint Intelligence; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments.
What does the module inherit from `official_ic_osint_strategy` for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 9; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

9.3.8 Agent Recruitment assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 9.

9.3.9 Agent Recruitment assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 9.

9.3.9.1 Agent Recruitment capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy** and [ageint238]; [ageint239].

9.3.9.2 Agent Recruitment instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy** and [ageint238]; [ageint239].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

9.3.9.3 Agent Recruitment assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
MICE Framework for recruitment-risk literacy; **RASCLS tradecraft vocabulary for recruitment-risk literacy**; **Supplied-Record Review: Access Claims without Targeting People**; **Development Claims versus Consent, Scope, and Welfare**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
Recognizing Pressure in Supplied Messages: A Completed Ethics; **Declassified source-protection and institutional-control case study**; **Digital Contact Claims: Channel Labels Are Not Evidence of Intent**; **Shared-Experience Experiment: Closeness Is Not Commitment**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
AI Recruitment-Cost Claims: An Unverified Forecast; **Human-Source Ethics: Authority, Consent, Withdrawal, and Protection**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

9.3.10 Agent Recruitment refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint238]; [ageint239] and **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**.

9.3.10.1 Agent Recruitment refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. The local signals begin with [ageint238]; [ageint239].

9.3.10.2 Agent Recruitment claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**, and the source spine for these checks begins with [ageint238]; [ageint239].

9.3.11 Agent Recruitment reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint238]; [ageint239].

Contextual source routes. For module 4's review-checklist section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy**. [ageint238]; [ageint239].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.

- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

9.3.12 Agent Recruitment learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **MICE Framework for recruitment-risk literacy; RASCLS tradecraft vocabulary for recruitment-risk literacy** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint238]; [ageint239].

Section 2, Section 8, Section 10

10 Agent Handling and Management

10.0.1 Agent Handling and Management figures and course links: visual evidence, source flow, and navigation

The module uses Figure 39 and Figure 36 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 8, Section 9, Section 11.
This module teaches the **Collection Management and Multi-INT Requirements Discipline** lane through a bounded, source-backed coursebook chapter. [ageint239]; [ageint240].

10.1 Collection Management and Multi-INT Requirements Discipline frame for Agent Handling and Management: source context, topic focus, and reader task

Navigation. Parent section: Section 10.

10.1.1 Agent Handling and Management orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 10.

10.1.2 Agent Handling and Management conceptual primer: source context, core model, and reader task

This chapter teaches collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.
The central distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Core topics include **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity; Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint239]; [ageint240].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **Human-Source Relationships and the Credibility of Particular Reports** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

10.1.3 Agent Handling and Management learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 10.

- Connect **Human-Source Relationships and the Credibility of Particular Reports and Overt, Covert, and Clandestine: Historical Terminology and Ambiguity** to **Collection Management and Multi-INT Requirements Discipline** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures.

10.1.4 Agent Handling and Management core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 10.

Term	Working definition
Priority	the relative importance of an intelligence question
Source discipline	a broad evidence channel such as HUMINT, SIGINT, GEOINT, OSINT, or FININT
Minimization	the rule that limits acquisition, retention, or use of unnecessary information
Source protection	the duty to reduce risk to people, methods, and sensitive relationships
Evaluation	the feedback step that tests whether the evidence satisfied the requirement
Gray-zone indicator	an observed feature potentially relevant to ambiguous coercion; neither coercive intent nor an armed-conflict threshold follows from the label
Proxy pattern	a relationship pattern that may motivate a sponsorship hypothesis but does not establish sponsorship, direction, or operational control

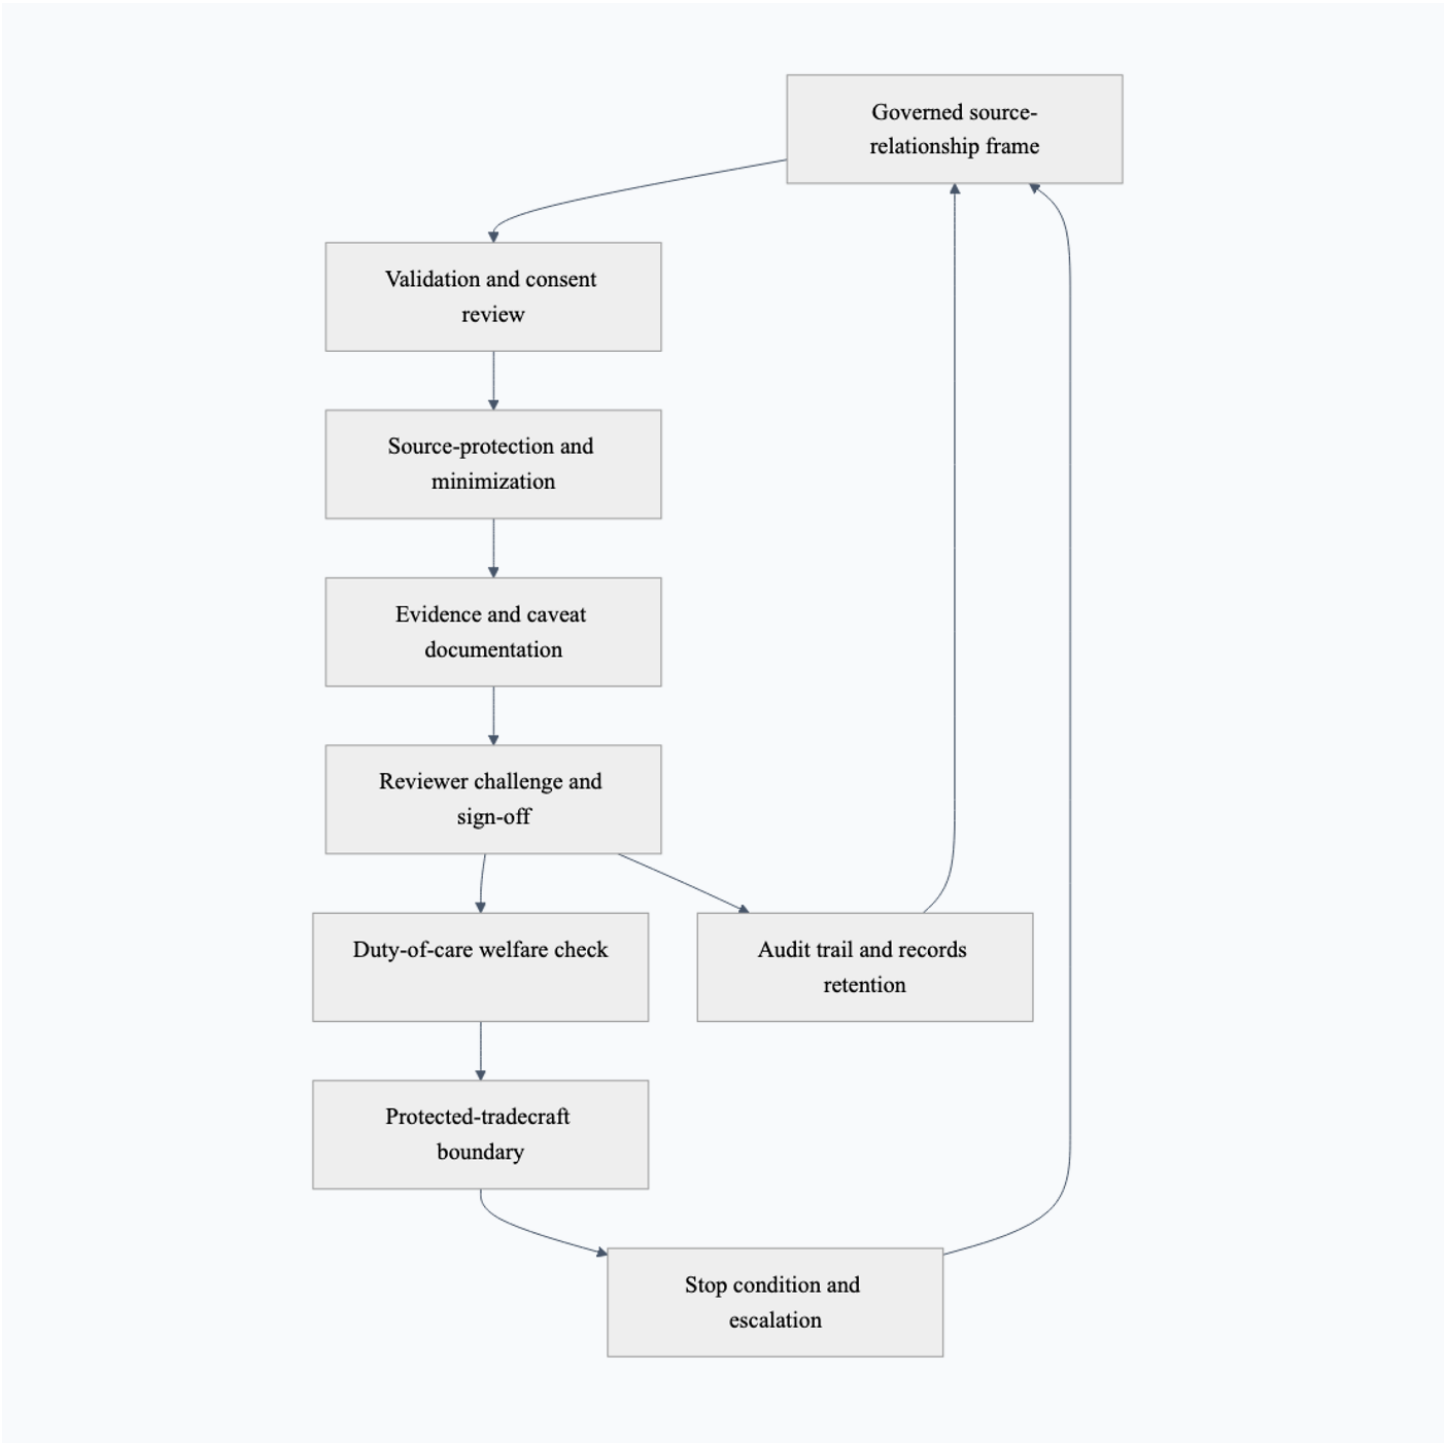

Figure 39: The governed review cycle for documenting source relationships, protection, and reviewer accountability without recreating handling procedures. In the human intelligence humint / agent handling and management section, it lets readers compare Governed source-relationship frame, Validation and consent review, Source-protection and minimization, and Evidence and caveat documentation so the visual functions as a traceable course aid rather than an unscoped assertion.

10.2 Requirements-to-Evidence Lens path for Agent Handling and Management: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 10.

10.2.1 Agent Handling and Management practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 10.

10.2.2 Agent Handling and Management topic lessons: source-backed concepts and transfer tasks

Agent Handling and Management builds collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The sequence opens with **Human-Source Relationships and the Credibility of Particular Reports**, **Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**, **Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 36; module overview Section 10; curriculum atlas Section 2.

Contextual source routes. For module 5's topic-lessons section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

10.2.2.1 Lesson 1: Human-Source Relationships and the Credibility of Particular Reports

Concept. Human-Source Relationships and the Credibility of Particular Reports is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Here an agent is a human source, and a case officer/handler is a distinct professional role—not a software actor. A trusted relationship does not establish a particular report's access, accuracy, firsthand status, or freedom from translation error. **Completed synthetic lineage case:** trusted source A reports at 10:00 that a fictional seminar moved at 09:00, explicitly citing notice N1; report B at 10:20 translates A and changes 'might move' to 'moved.' The evidence table therefore records one hearsay origin, a 09:00 event claim, two report times, and a consequential translation change, not two independent confirmations; supplied original N1 at 10:30 says the move is only proposed. The final assessment retracts the confirmed-move claim, retains the proposal with caveats, and stops downstream reuse until the correction accompanies it; familiarity with A neither proves deception nor cures the error.

Why it matters. Human-Source Relationships connects classroom vocabulary to Collection Management and Multi-INT Requirements Discipline practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Human-Source Relationships and the Credibility of Particular Reports**: [ageint025]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Human-Source Relationships**, inspect the original passages. Curriculum annotation for [ageint025]: This is an episode of The Unmistakable Creative Podcast featuring former CIA field operative Andrew Bustamante discussing intelligence work. The conversation covers his background at the Air Force Academy and CIA training, and frames espionage as resting on reading people, trust, influence, and empathy rather than glamour or action. It also addresses how operatives are selected, the isolation of covert work, and its psychological effects on personal relationships. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Human-Source Relationships**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Human-Source Relationships and the Credibility**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Human-Source Relationships** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Human-Source Relationships and the Credibility of Particular Reports is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Human-Source Relationships** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.2 Lesson 2: Overt, Covert, and Clandestine: Historical Terminology and Ambiguity

Concept. Overt, Covert, and Clandestine: Historical Terminology and Ambiguity is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. In descriptive usage, overt concerns acknowledged activity, clandestine concerns concealment of the activity, and covert often concerns concealed sponsorship; everyday and legal uses differ, so a source's jurisdiction and definition matter. A meeting's label does not establish what was said, a person's consent, or the accuracy of any report. The inherited contextual sources do not establish a universal legal classification for all encounters. Compare wording in supplied public records only; do not plan, simulate, or arrange concealed contact.

Why it matters. Without explicit treatment of **Overt, Covert, and Clandestine**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**: [ageint029] and [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Overt, Covert, and Clandestine**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Overt, Covert, and Clandestine**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Overt Covert and Clandestine**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Overt, Covert, and Clandestine** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Overt, Covert, and Clandestine: Historical Terminology and Ambiguity establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Overt, Covert, and Clandestine** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.3 Lesson 3: Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading

Concept. Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. An observed recurrence, a described route, and an inference of hostile surveillance are different propositions; a historical source's assertion does not collapse them into proof. Chance overlap, routine movement, incomplete records, and reporting error remain alternatives in an abstract supplied case. The inherited operational material is context only, not evidence for a general detection capability or a classroom route exercise. No route design, evasion, tracking, real-facility observation, or learner investigation belongs in this lesson; unresolved safety concerns go to the instructor.

Why it matters. Analysts use **Surveillance-Detection Claims** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading**: [ageint026] and [ageint016]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Surveillance-Detection Claims**, inspect the original passages. Curriculum annotation for [ageint026]: A YouTube video titled "Inside the CIA: The tension and drama behind surveillance detection operations," released May 3, 2024, featuring a former CIA officer. The speaker describes the operational complexity and interpersonal tension involved in moving safely from a starting point to a meeting while accounting for the presence of hostile observation. It conveys the difficulty and stress of clandestine field meetings as recounted from personal experience. Curriculum annotation for [ageint016]: Place where victim can be controlled with limited avenues of escape. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Surveillance-Detection Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Surveillance-Detection Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Surveillance-Detection Claims** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Surveillance-Detection Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.4 Lesson 4: Historical Indirect Exchanges: Provenance and Information Loss

Concept. Historical Indirect Exchanges: Provenance and Information Loss is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A dead-drop description concerns an indirect exchange without simultaneous presence; physical and digital examples are historical or scholarly contexts, not recommended communication methods. For analytic literacy, the important distinction is between the transfer channel and the content's provenance: a file's arrival does not establish its author, completeness, or truth. In the synthetic seminar case, B's translated copy is a transformation of A, not an independent witness, whatever channel carried it. No placement, encoding, retrieval, concealment, or operational exchange instructions are supplied.

Why it matters. Historical Indirect Exchanges matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Historical Indirect Exchanges: Provenance and Information Loss**: [ageint027] and [ageint028]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Historical Indirect Exchanges**, inspect the original passages. No displayable curriculum annotation is available for [ageint027] and [ageint028]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical Indirect Exchanges**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Historical Indirect Exchanges**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical Indirect Exchanges** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Historical Indirect Exchanges: Provenance and Information Loss can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **Historical Indirect Exchanges** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.5 Lesson 5: Intermediaries: Hearsay, Transformation, and Attribution Limits

Concept. Intermediaries: Hearsay, Transformation, and Attribution Limits uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. An intermediary adds a reporting or transmission step; it may introduce delay, omission, or reinterpretation without any deliberate deception. A chain of three messengers is not three independent sources if each depends on one original statement. The correct model records who directly observed the event, who relayed it, what changed, and which links are unknown, using fictional case labels rather than identities. Distance from an origin does not itself prove deniability, sponsorship, or absence of responsibility.

Why it matters. Analysts use **Intermediaries: Hearsay, Transformation, and Attribution Limits** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Intermediaries: Hearsay, Transformation, and Attribution Limits**: [ageint029]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Intermediaries: Hearsay, Transformation, and Attribution Limits**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Intermediaries**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Intermediaries**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Intermediaries: Hearsay, Transformation, and Attribution Limits** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Intermediaries: Hearsay, Transformation, and Attribution Limits is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Intermediaries: Hearsay, Transformation, and Attribution Limits** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.6 Lesson 6: Historical Entity Claims: Separate Ownership, Function, and Attribution

Concept. **Historical Entity Claims: Separate Ownership, Function, and Attribution** uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. In this human-intelligence context, 'agent infrastructure' does not mean software infrastructure. A front is an attributed role/function claim, while an entity's registration or legal form is a different fact; shell-entity status alone does not establish unlawful or intelligence activity. A public record can support a name and filing date without proving beneficial control, purpose, or sponsorship. The inherited general source is contextual, so missing ownership and function evidence remains unknown rather than filled by suspicion or real-entity investigation.

Why it matters. Analysts use **Historical Entity Claims** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Historical Entity Claims: Separate Ownership, Function, and Attribution**: [ageint029]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Historical Entity Claims**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical Entity Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Historical Entity Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical Entity Claims** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Historical Entity Claims: Separate Ownership, Function, and Attribution establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Historical Entity Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.7 Lesson 7: Ambiguous Observations and Non-Accusatory Safety

Concept. **Ambiguous Observations and Non-Accusatory Safety** is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A perceived anomaly is not proof of hostile intent, and confidence in a narrator is not a validated detector. For a wholly invented observation card saying 'the same vehicle appears twice,' repetition is the observation; ordinary shared routes and duplicate recording remain alternatives to surveillance. The bounded answer records insufficient evidence and refers the supplied concern to the instructor without naming a suspect or gathering more observations. Practitioner/vendor descriptions do not establish error rates; no counter-surveillance, evasion, or live observation exercise follows.

Why it matters. Ambiguous Observations matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Ambiguous Observations and Non-Accusatory Safety**: [ageint030] and [ageint031]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Ambiguous Observations**, inspect the original passages. Curriculum annotation for [ageint031]: There are cameras everywhere! Everything is trackable! These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Ambiguous Observations**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Ambiguous Observations and Accusatory Safety**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Ambiguous Observations** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Ambiguous Observations and Non-Accusatory Safety replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Ambiguous Observations** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.8 Lesson 8: Human-Source Reporting: Access, Timing, and Corroboration **Concept. Human-Source Reporting: Access, Timing, and Corroboration** is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A human source's claimed position or reporting frequency is not evidence that a specific statement was firsthand or current. In the seminar case, a 10:20 report about a 09:00 proposal needs separate event, report, and translation timestamps; frequent copies cannot increase independence. Record access claims, hearsay, shared origins, incentives as disclosed rather than assumed, and unresolved contradictions before assessing a report. The lesson ends with a bounded evidence-gap statement, not instructions to task, test, or manage a real source; the inherited AI commentary does not validate human-source reports.

Why it matters. **Human-Source Reporting** matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Human-Source Reporting: Access, Timing, and Corroboration**: [ageint029] and [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Human-Source Reporting**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Human-Source Reporting**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Human-Source Reporting**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Human-Source Reporting** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Human-Source Reporting: Access, Timing, and Corroboration can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **Human-Source Reporting** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.9 Lesson 9: Ending Participation: Welfare, Exposure, and Authorized **Concept. Ending Participation: Welfare, Exposure, and Authorized** is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Historical terms for exposure or ending a relationship must not be turned into extraction or operational response procedures. The defensible classroom question is what reuse remains permitted when a supplied participant withdraws or a record reveals sensitive information. Hold new use, minimize the review copy, preserve records only under the applicable approved rule, and refer welfare/disposition decisions to the authorized instructor or oversight role. Neither a low credibility assessment nor withdrawal justifies retaliation, accusation, or exposure.

Why it matters. Analysts use **Ending Participation** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Ending Participation: Welfare, Exposure, and Authorized**: [ageint029] and [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Ending Participation**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Ending Participation**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Ending Participation**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Ending Participation** work as a **source-risk and validation ethics worksheet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Ending Participation: Welfare, Exposure, and Authorized is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Ending Participation** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.10 Lesson 10: Declassified source-protection and institutional-control case study **Concept. Declassified source-protection and institutional-control case study** studies the declassified record for institutional lessons about source protection, oversight, and the danger of translating historical methods into current practice.

Worked reasoning and limits. The inherited ageint032 record is a catalog entry for a 2025 commercial translation, not itself an archival release or declassification certificate. A completed provenance disposition records publication existence as supported, while original document date/identifier, archival custody, official release status, translation fidelity, and omissions remain unknown unless supplied. A catalog description therefore cannot authenticate the underlying manual or demonstrate that its prescriptions worked. Retain it as attributed publisher/catalog context and stop any claim

that it proves declassified doctrine or current practice.

Why it matters. Analysts use **Declassified source-protection** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Declassified source-protection and institutional-control case study**: [ageint032]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Declassified source-protection**, inspect the original passages. Curriculum annotation for [ageint032]: A Google Books catalog entry for a 2025 English-translation edition of a Cold War-era Soviet intelligence training manual, published by Century Print Media Group with a translator's note by a retired NATO intelligence officer. The 144-page volume is presented as a historical document on Soviet human-intelligence doctrine and counterintelligence practice. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Declassified source-protection**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must cite the declassified source descriptor, the bounded lesson about **Declassified source-protection and institutional-control case**, the redaction caveat, the attribution uncertainty, the protected-detail boundary, and the reviewer who clears release. Shape **Declassified source-protection** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a source identity is safe to discuss once the operation is historical, when protection obligations and re-identification risk outlast the case itself.

Transfer task. Transfer **Declassified source-protection** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

10.2.2.11 Lesson 11: Micro-Expression Claims: Unsupported Deception and Source-Validation Inferences

Concept. **Micro-Expression Claims: Unsupported Deception and Source-Validation Inferences** compares deception indicators with alternative explanations and uncertainty before any operational inference.

Worked reasoning and limits. Facial movement classification, inferred emotion, inferred deception, and a report's credibility are four different claims; evidence for one does not establish the next. The inherited podcast/commentary supplies no task-specific independent validation of micro-expression truth or source-validation capability, so that capability is unsupported here—not rescued by adding human review. **Synthetic model-card decision:** a fictional card reports a facial score but supplies no verified ground truth, error rates, context-shift analysis, or subgroup evidence; the completed review marks deception and reliability claims indeterminate and holds consequential reuse. No biometric analysis of real people or learners, truth/guilt/trustworthiness inference, or adverse decision may be based on these scores; a later validity claim would require directly examined appropriate empirical evidence.

Why it matters. Analysts use **Micro-Expression Claims** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Micro-Expression Claims: Unsupported Deception and Source-Validation Inferences**: [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Micro-Expression Claims**, inspect the original passages. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Micro-Expression Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Micro-Expression Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Micro-Expression Claims** work as a **source-risk and validation ethics worksheet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Micro-Expression Claims: Unsupported Deception and Source-Validation Inferences replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Micro-Expression Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.2.12 Lesson 12: AI Personalization Claims: Consent, Profiling, and Evidence Boundaries

Concept. **AI Personalization Claims: Consent, Profiling, and Evidence Boundaries** is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. A model-generated personality label is not an observed trait, a validated prediction of cooperation, or permission to tailor pressure. The inherited commentary does not demonstrate effectiveness, welfare, or fairness of individualized persuasion. In a supplied synthetic draft, remove inferred personality fields and replace a targeted pressure recommendation with a neutral explanation of purpose and the unresolved reuse permission; hold the draft if its necessary authority is absent. Assess documentation and informed choice, not how to optimize influence, and do not profile or persuade real people.

Why it matters. AI Personalization Claims connects classroom vocabulary to Collection Management and Multi-INT Requirements Discipline practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **AI Personalization Claims: Consent, Profiling, and Evidence Boundaries**: [ageint004]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **AI Personalization Claims**, inspect the original passages. Curriculum annotation for [ageint004]: Tom Mulligan argues that artificial intelligence will enhance rather than replace human intelligence professionals, contending that the future of intelligence lies in human-machine collaboration. He maintains that uniquely human qualities such as intuition, experience, and independent judgment become more valuable as adversaries gain access to the same AI tools. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI Personalization Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **AI Personalization Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **AI Personalization Claims** work as a **source-risk and validation ethics worksheet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that AI Personalization Claims: Consent, Profiling, and Evidence Boundaries can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **AI Personalization Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

10.2.3 Agent Handling and Management worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic policy cell compares public indicators of hybrid pressure against an approved collection plan for a benign border-disruption exercise. [ageint239]; [ageint240].

Contextual source routes. For module 5's worked-example section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **human-source literacy and source protection**. Learners use a **source-risk and validation ethics worksheet** and keep this boundary visible: No elicitation, impersonation, covert contact, or operational source-management procedures; all cases use classroom fixtures.

Frame. The classroom question centers on **Human-Source Relationships and the Credibility of Particular Reports**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **Human-Source Relationships and the Credibility of Particular Reports** scenario, use a fictional freight-delay notice, a weather bulletin, interview H1 reporting the delay and H2 repeating H1, two toy signals absent during receiver downtime, and a scope card permitting only these supplied records. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Human-Source Relationships and the Credibility of Particular Reports**, students first rank the question about disruption above the unsupported sponsorship allegation; then match each gap to a source discipline without tasking it, distinguish interview access and motivation from accuracy, and separate signal absence from collection authority; remove H2 and compare a second toy signal lost during downtime as controls. Stop any proposed contact or interception and send missing authority or evidence questions to the instructor. Pause whenever an inference about Human-Source Relationships and the Credibility of Particular Reports appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a requirements matrix recording disruption reports but unresolved cause and sponsorship, one underlying interview account rather than two independent sources, and an uninterpretable transmitter state during receiver downtime; no human contact, expanded collection, or signal observation confers authority Retain it as the **source-risk and validation ethics worksheet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Human-Source Relationships and the Credibility of Particular Reports** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to requirements decomposition and source-discipline fit, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Human-Source Relationships and the Credibility of Particular Reports** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

10.2.4 Agent Handling and Management practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

Contextual source routes. For module 5's practice-sequence section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Human-Source Relationships and the Credibility of Particular Reports, Overt, Covert, and Clandestine: Historical Terminology and Ambiguity, Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Collection Management and Multi-INT Requirements Discipline** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Human-Source Relationships and the Credibility of Particular Reports: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the source-risk and validation ethics worksheet fields for Human-Source Relationships and the Credibility of Particular Reports.	Unit profile note.	Evidence artifacts include validation note, pressure-risk checklist.

Move	Learner action	Output	Check
4. Challenge	Test the misconception that Human-Source Relationships and the Credibility of Particular Reports is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.	Failure-mode note.	The artifact applies the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

10.2.4.1 Agent Handling and Management instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. [ageint239]; [ageint240].

10.2.4.2 Agent Handling and Management extension exercise: peer validation and refresh trigger review Navigation. Parent section: Section 10.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.2.5 Agent Handling and Management knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 10.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Human-Source Relationships and the Credibility of Particular Reports**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **Human-Source Relationships and the Credibility of Particular Reports** to the final topic, **AI Personalization Claims: Consent, Profiling, and Evidence Boundaries**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Collection Management and Multi-INT Requirements Discipline** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which gray-zone indicator changes the least-intrusive source choice without crossing into operational tasking?
5. Correct this misconception: that Human-Source Relationships and the Credibility of Particular Reports is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

10.2.5.1 Agent Handling and Management answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Human-Source Relationships and the Credibility of Particular Reports** without source evidence, uncertainty, or a safe transfer task.

10.3 Agent Handling and Management assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 10.

10.3.1 Agent Handling and Management evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 10.

10.3.2 Agent Handling and Management transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 10.

10.3.2.1 Agent Handling and Management lineage and source tradition: profile, concepts, and first anchors This sits in the **Collection Management and Multi-INT Requirements Discipline** lineage: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. [ageint239]; [ageint240].

10.3.2.2 Agent Handling and Management working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 10.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**, with provenance and reviewability throughout.

10.3.2.3 Agent Handling and Management knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** accountable requirements, source-discipline choices, minimization rules, source-risk notes, and evaluation criteria. [ageint239]; [ageint240].
- **Transforms:** priority mapping, source-discipline fit, least-intrusive evidence selection, and feedback review.
- **Outputs:** requirements matrix, collection-limit note, source-quality card, and gap list.
- **Failure modes:** recruitment or interception drift, over-collection, weak minimization, and source exposure.

10.3.2.4 Agent Handling and Management transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 10.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.
- **Evidence contract:** keep the **Collection Management and Multi-INT Requirements Discipline** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as requirements matrix, collection-limit note, source-quality card, and gap list that another reviewer can audit.

10.3.2.5 Agent Handling and Management profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 10.

The matched profile emphasizes requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. The method stack is priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop; the local topic cluster is **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.3 Agent Handling and Management evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 10.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Collection Management and Multi-INT Requirements Discipline** profile tells reviewers what evidence is strong enough for the module artifact built around **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.3.1 Agent Handling and Management guide source spine: inherited keys and local citation roles Primary guide citations: [ageint239]; [ageint240]; [ageint241]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint025]; [ageint029]; [ageint004]; [ageint026]; [ageint016]; [ageint027]; [ageint028]; [ageint030]; [ageint031]; [ageint032].

10.3.3.2 Agent Handling and Management verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint239]; [ageint240].

Tier	What counts	How it is used
Source guide	[ageint239]; [ageint240]; [ageint241]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint025]; [ageint029]; [ageint004]; [ageint026]; [ageint016]; [ageint027]; [ageint028]; [ageint030]; [ageint031]; [ageint032].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 5's source-canon section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity** and [ageint239]; [ageint240], but only directly verified source URLs are encoded as citations.

10.3.3.3 Agent Handling and Management intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. [ageint239]; [ageint240].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

10.3.3.4 Agent Handling and Management runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 10.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	5.99	5.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Agent Handling and Management to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	5.101	5.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Agent Handling and Management	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	5.102	5.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Agent Handling and Management	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Human-Source Relationships and the Credibility of Particular Reports	5.1	5.1 Human-Source Relationships and the Credibility of Particular Reports	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

[ageint032]	Cited source (see bibliography)	A Google Books catalog entry for a 2025 English-translation edition of a Cold War-era Soviet intelligence training manual, published by Century Print Media Group with a translator's note by a retired NATO intelligence officer. The 144-page volume is presented as a historical document on Soviet human-intelligence doctrine and counterintelligence practice.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 10; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

10.3.4 Agent Handling and Management governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 10.

10.3.5 Agent Handling and Management analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 5's governance-boundary section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Collection Management and Multi-INT Requirements Discipline** for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. [ageint239]; [ageint240].

Curriculum topic spine: Human-Source Relationships and the Credibility of Particular Reports, **Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**, **Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [National Archives and Records Administration, 1981]; [National Security Agency, 2026d]; [Office of the Director of National Intelligence, 2026d].

Conceptual depth: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit.

Method stack: priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop.

Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable.

Known failure modes: opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority.

Defensive boundary: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures. Applied to **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Joint Chiefs of Staff, 2026]	Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[National Security Agency, 2026d]	Official NSA public explanation of FISA oversight for signals intelligence collection governed by statutory and court-authorized controls. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.

10.3.5.1 Agent Handling and Management evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Collection Management and Multi-INT Requirements Discipline** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint239]; [ageint240].

10.3.6 Agent Handling and Management agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 10.

AGEINT translation is bounded by the **Collection Management and Multi-INT Requirements Discipline** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.6.1 Agent Handling and Management permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 10.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.6.2 Agent Handling and Management excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint239]; [ageint240] and **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

10.3.7 Agent Handling and Management governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 10.
Governance is practiced as a gate on the **Collection Management and Multi-INT Requirements Discipline** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.7.1 Agent Handling and Management governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint239]; [ageint240].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Collection Management and Multi-INT Requirements Discipline** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

10.3.7.2 Agent Handling and Management evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.7.3 Agent Handling and Management current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. [ageint239]; [ageint240].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_204` for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_joint_pub_2_0` for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**?	JP 2-0: Joint Intelligence; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments.
What does the module inherit from `official_ic_osint_strategy` for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 10; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

10.3.8 Agent Handling and Management assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 10.

10.3.9 Agent Handling and Management assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 10.

10.3.9.1 Agent Handling and Management capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity** and [ageint239]; [ageint240].

10.3.9.2 Agent Handling and Management instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity** and [ageint239]; [ageint240].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

10.3.9.3 Agent Handling and Management assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Human-Source Relationships and the Credibility of Particular Reports; **Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**; **Surveillance-Detection Claims: Evidence Limits and Safe Historical Reading**; **Historical Indirect Exchanges: Provenance and Information Loss Intermediaries: Hearsay, Transformation, and Attribution Limits**; **Historical Entity Claims: Separate Ownership, Function, and Attribution**; **Ambiguous Observations and Non-Accusatory Safety**; **Human-Source Reporting: Access, Timing, and Corroboration**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Ending Participation: Welfare, Exposure, and Authorized; **Declassified source-protection and institutional-control case study**; **Micro-Expression Claims: Unsupported Deception and Source-Validation Inferences**; **AI Personalization Claims: Consent, Profiling, and Evidence Boundaries**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

10.3.10 Agent Handling and Management refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint239]; [ageint240] and **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**.

10.3.10.1 Agent Handling and Management refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. The local signals begin with [ageint239]; [ageint240].

10.3.10.2 Agent Handling and Management claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**, and the source spine for these checks begins with [ageint239]; [ageint240].

10.3.11 Agent Handling and Management reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint239]; [ageint240].

Contextual source routes. For module 5's review-checklist section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity**. [ageint239]; [ageint240].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

10.3.12 Agent Handling and Management learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Human-Source Relationships and the Credibility of Particular Reports; Overt, Covert, and Clandestine: Historical Terminology and Ambiguity** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint239]; [ageint240].

Section 2, Section 8, Section 9, Section 11

11 Source Protection and CI Integration

11.0.1 Source Protection and CI Integration figures and course links: visual evidence, source flow, and navigation

The module uses Figure 40 and Figure 36 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 8, Section 10, Section 12.
This module teaches the **Counterintelligence and Source-Integrity Defense** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint241].

11.1 Counterintelligence and Source-Integrity Defense frame for Source Protection and CI Integration: source context, topic focus, and reader task

Navigation. Parent section: Section 11.

11.1.1 Source Protection and CI Integration orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 11.

11.1.2 Source Protection and CI Integration conceptual primer: source context, core model, and reader task

This chapter teaches counterintelligence as source-integrity defense: the class studies how institutions protect evidence, people, access, and judgment from deception and compromise. The chapter uses **Structured-Judgment Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.
The central distinction is to separate defensive awareness from surveillance, handling, or operational security playbooks. Core topics include **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance; Polygraph and Lie-Detection Claims: Physiology Is Not Truth**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint241].
Learners move from vocabulary and the **Structured-Judgment Lens** distinction through topic lessons on **Source-Quality Anomalies: Competing Explanations and Protected** with evidence and misconception checks, then assemble an **analytic note with hypotheses, evidence table, confidence, and dissent fields** with safety and rights gates.

11.1.3 Source Protection and CI Integration learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 11.

- Connect **Source-Quality Anomalies: Competing Explanations and Protected and Compartmentation and need-to-know governance** to **Counterintelligence and Source-Integrity Defense** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build an **analytic note with hypotheses, evidence table, confidence, and dissent fields** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate defensive awareness from surveillance, handling, or operational security playbooks; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as source compromise, deception acceptance, identity overconfidence, insider blind spots, and collapsing CI concerns into undifferentiated IT-security triage, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: CI content supports defensive awareness, source protection, and analytic integrity; it does not provide surveillance or handling playbooks.

11.1.4 Source Protection and CI Integration core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 11.

Term	Working definition
Source integrity	the assessed preservation of evidence origin, content, and context; an intact chain does not establish that the underlying claim is true
Compromise signal	a clue that access, identity, or source reliability needs review
Corroboration	independent support that reduces single-source vulnerability
Insider risk	risk associated with trusted access and possible error, misuse, or control failure; an anomaly does not establish motive or identify a culprit
Protected disclosure	a safe channel for reporting concerns without exposing sensitive details

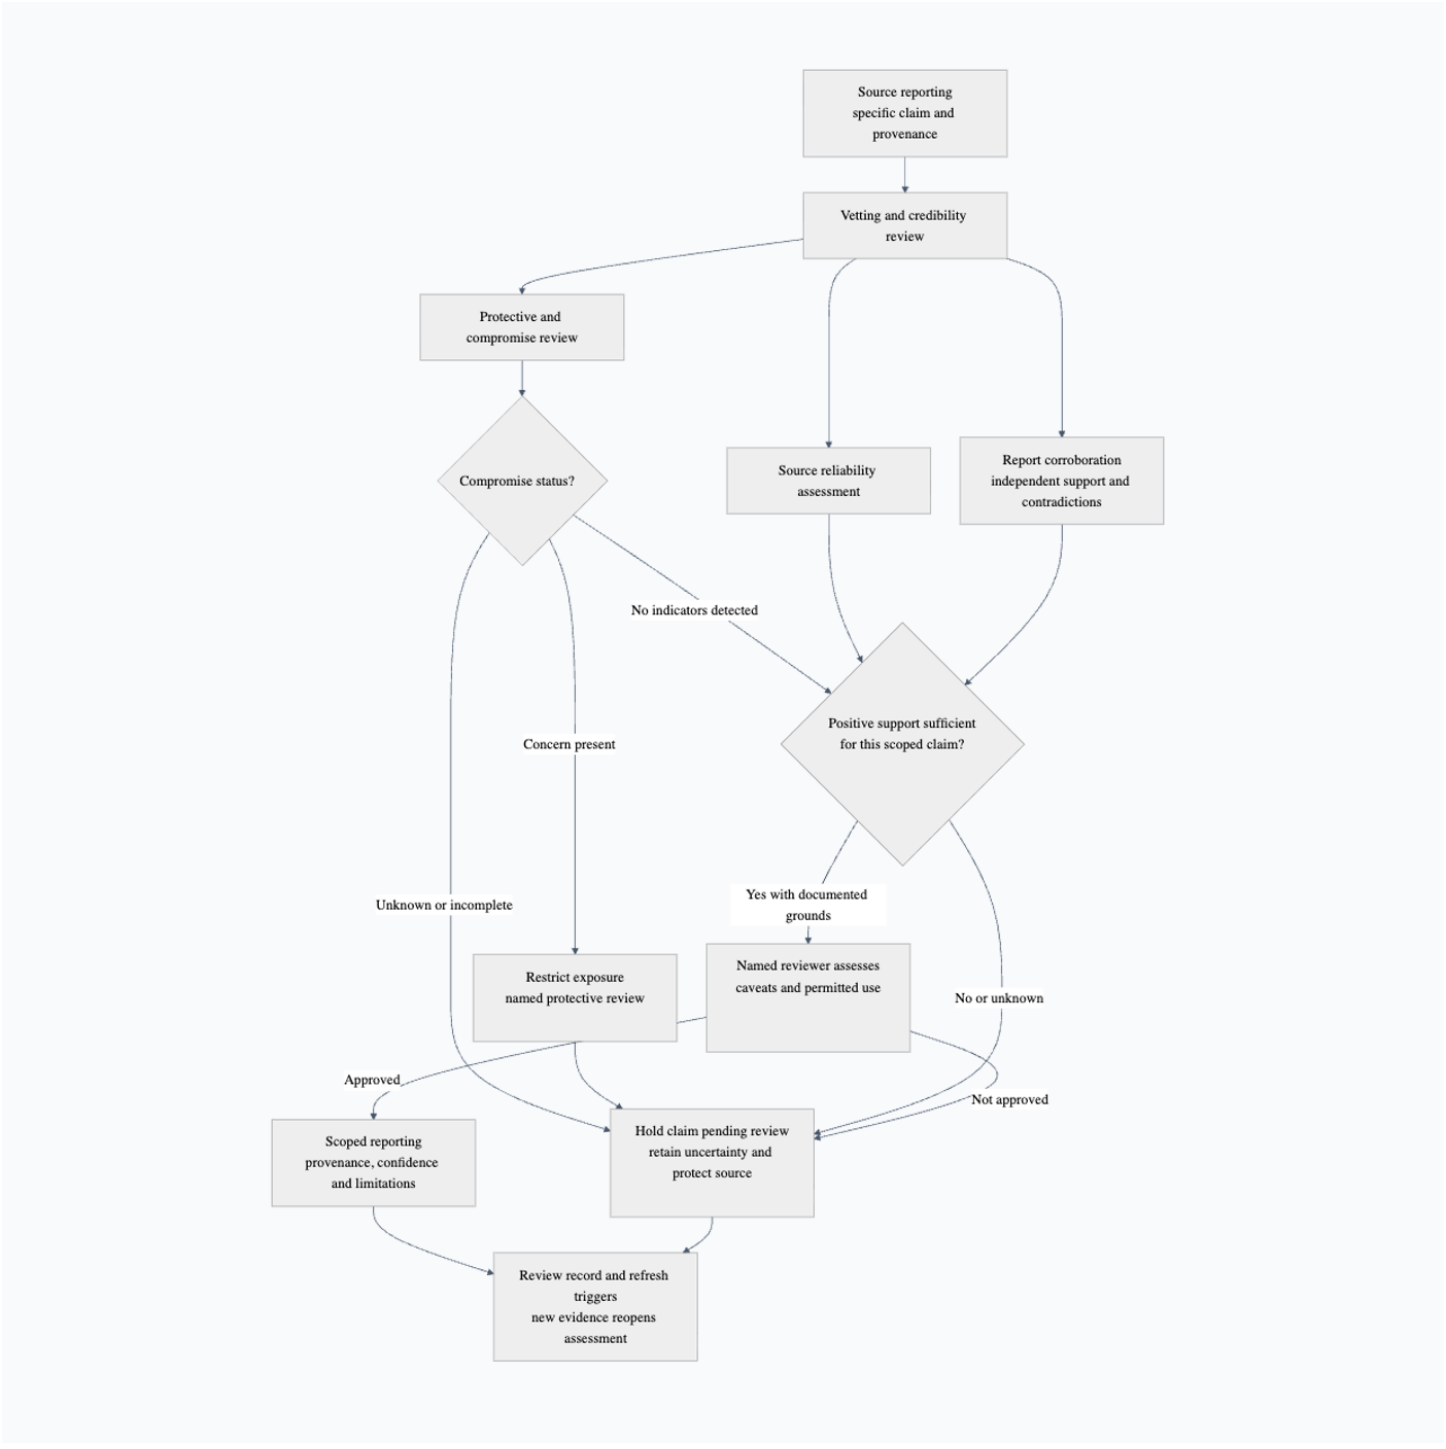

Figure 40: Absence of detected compromise is not validation. This teaching flow separates source reliability, report corroboration, and protective review: unknown status or insufficient evidence leads to a hold, not acceptance. A named reviewer may authorize a claim-bounded report only on positive support, retaining provenance, uncertainty, limitations, and source-protection duties; later evidence can reopen the assessment.

11.2 Structured-Judgment Lens path for Source Protection and CI Integration: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 11.

11.2.1 Source Protection and CI Integration practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 11.

11.2.2 Source Protection and CI Integration topic lessons: source-backed concepts and transfer tasks

Source Protection and CI Integration builds counterintelligence as source-integrity defense: the class studies how institutions protect evidence, people, access, and judgment from deception and compromise. The sequence opens with **Source-Quality Anomalies: Competing Explanations and Protected**, **Compartmentation and need-to-know governance**, **Polygraph and Lie-Detection Claims: Physiology Is Not Truth** and applies the **Structured-Judgment Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 36; module overview Section 11; curriculum atlas Section 2.

Contextual source routes. For module 6's topic-lessons section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

11.2.2.1 Lesson 1: Source-Quality Anomalies: Competing Explanations and Protected Concept. Source-Quality Anomalies: Competing Explanations and Protected is taught in the **Counterintelligence and Source-Integrity Defense** lane. The analytic distinction is to separate defensive awareness from surveillance, handling, or operational security playbooks. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Completed synthetic case: report R1 about a fictional reading-room closure says Tuesday, translated R2 says Thursday, and both cite notice N; supplied N is missing its date field. The observed discrepancy supports a source-quality concern, while translation error, stale versions, copied contamination, and deliberate alteration remain competing explanations; it does not establish penetration or anyone's intent. When an instructor supplies the complete N showing Tuesday, the reviewer corrects R2, records that an error is established but its cause is still unresolved, and sends only the case labels, contradiction, and caveat to the authorized review role. The disposition is protected review rather than accusation; no learner investigates, contacts anyone, or infers compromise from access opportunity alone, and any real identity/sensitive access or unclear authority stops the exercise. Inherited ICS/DevSecOps/SSDF citations do not validate a human-source compromise detector; absence of detected indicators is not positive report validation.

Why it matters. Source-Quality Anomalies matters in the **Counterintelligence and Source-Integrity Defense** lane because deception-aware source review and defensive escalation evidence must stay separate from judgment; source compromise is a common failure.

Source support. Inherited source-guide context for **Source-Quality Anomalies: Competing Explanations and Protected**: [ageint307], [ageint305], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **Source-Quality Anomalies**, inspect the original passages. Curriculum annotation for [ageint307]: Official CISA Industrial Control Systems recommended practices page for defensive ICS/OT safety, resilience, and incident-preparation guidance. Curriculum annotation for [ageint305]: Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Source-Quality Anomalies**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the source descriptor, the bounded claim about **Source-Quality Anomalies**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Source-Quality Anomalies** work as a **source-risk and validation ethics worksheet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Source-Quality Anomalies: Competing Explanations and Protected can be used while ignoring the rule to separate defensive awareness from surveillance, handling, or operational security playbooks.

Transfer task. Transfer **Source-Quality Anomalies** to a second module by preserving deception-aware source review and defensive escalation, changing the source evidence, and naming a new reviewer.

11.2.2.2 Lesson 2: Compartmentation and need-to-know governance Concept. Compartmentation and need-to-know governance maps compartment boundaries, access lists, and need-to-know fields before any information moves across teams.

Worked reasoning and limits. Here agent means human source, not software agent; compartmentation limits sensitive identity/access information, but a reviewer still needs enough report-basis and caveat information to evaluate the claim. In a synthetic access card, the classroom analyst receives 'translated hearsay from notice N,' while the authorized custodian alone holds the original restricted descriptor; no identity is needed to see the shared origin. Withholding the shared-origin fact would falsely make R1/R2 look independent, while releasing the identity would add risk without improving the inference. Protection and analytic traceability must therefore be designed together rather than equating more secrecy with better validation.

Why it matters. Compartmentation and need-to-know governance connects classroom vocabulary to Counterintelligence and Source-Integrity Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Compartmentation and need-to-know governance**: [ageint029]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **Compartmentation and need-to-know governance**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the governance descriptor, the bounded claim about **Compartmentation and need-to-know governance**, the compartmentation caveat, the uncertainty note, the non-authorization boundary, and the reviewer who signs oversight.

Shape the same topic work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Compartmentation and need-to-know governance**: that governance vocabulary about tradecraft confers operational authorization rather than the constraints under which any action must be approved.

Transfer task. Reuse the **Compartmentation and need-to-know governance** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

11.2.2.3 Lesson 3: Polygraph and Lie-Detection Claims: Physiology Is Not Truth

Concept. Polygraph and Lie-Detection Claims: Physiology Is Not Truth frames CI topics as source-vetting, anomaly review, and institutional protection—not operational entrapment.

Worked reasoning and limits. Polygraph measures physiological responses; a response, an inferred emotion, an inference of deception, and the accuracy of a particular report are different propositions. No appropriate empirical polygraph-validation source is supplied here, and the inherited IT-security citations do not establish screening accuracy or report truth. **Entirely invented arithmetic, not device performance:** among 1,000 fictional records with 10 stipulated positive cases, suppose a hypothetical screen flags 8 of those 10 and 99 of the other 990; only 8 of 107 flags correspond to the stipulated condition, and 2 positives are missed. This shows dependence on assumed prevalence and error rates, not real-world accuracy, and 'not flagged' is not validation. The completed decision is insufficient evidence for truth/compromise, no real testing or biometric inference, and no adverse judgment from the screen; independent report evidence and protected review remain necessary.

Why it matters. Polygraph and Lie-Detection Claims matters in the **Counterintelligence and Source-Integrity Defense** lane because deception-aware source review and defensive escalation evidence must stay separate from judgment; source compromise is a common failure.

Source support. Inherited source-guide context for **Polygraph and Lie-Detection Claims: Physiology Is Not Truth**: [ageint307], [ageint305], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **Polygraph and Lie-Detection Claims**, inspect the original passages. Curriculum annotation for [ageint307]: Official CISA Industrial Control Systems recommended practices page for defensive ICS/OT safety, resilience, and incident-preparation guidance. Curriculum annotation for [ageint305]: Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Polygraph and Lie-Detection Claims**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the source descriptor, the bounded claim about **Polygraph and Lie-Detection Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Polygraph and Lie-Detection Claims** work as a **source-risk and validation ethics worksheet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Polygraph and Lie-Detection Claims: Physiology Is Not Truth establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Polygraph and Lie-Detection Claims** to a second module by preserving deception-aware source review and defensive escalation, changing the source evidence, and naming a new reviewer.

11.2.2.4 Lesson 4: Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy

Concept. Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy compares deception indicators with alternative explanations and uncertainty before any operational inference.

Worked reasoning and limits. A double-agent account concerns a human-source relationship and competing claims of allegiance or control; it is not a software-agent pattern. A report's contradiction may justify re-examining provenance, but does not establish that the source is controlled by an adversary. In the reading-room case, even a supplied correction resolving the weekday leaves intent unknown; deliberate deception would require separate positive evidence, not a label inferred from inconsistency. Read historical accounts critically for source dependence and retrospective certainty, without running an operation, testing loyalties, or tasking anyone.

Why it matters. Without explicit treatment of **Double-Agent Accounts**, source compromise undermines deception-aware source review and defensive escalation review; the lesson builds the habit to separate defensive awareness from surveillance, handling, or operational security playbooks.

Source support. Inherited source-guide context for **Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy**: [ageint029]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **Double-Agent Accounts**, inspect the original passages. Curriculum annotation for [ageint029]: A roughly 28-page Scribd document titled "Agent Handling in Counterintelligence" providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Double-Agent Accounts**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the source descriptor, the bounded claim about **Double-Agent Accounts**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Double-Agent Accounts** work as a **source-risk and validation ethics worksheet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Double-Agent Accounts** to a second module by preserving deception-aware source review and defensive escalation, changing the source evidence, and naming a new reviewer.

11.2.2.5 Lesson 5: Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits

Concept. Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. A threat account must distinguish observed information gathering, an assessed organization, and an inference of hostile purpose; none follows solely from a person's associations or interest in a public topic. The inherited commentary's biographical or rhetorical fragments do not validate current actor attribution or a detection method. In a supplied synthetic concern, summarize the artifact and access issue with case labels, preserve benign alternatives, and route it through the authorized protected-review channel. Do not name suspects, infer protected traits, contact organizations, or gather new intelligence.

Why it matters. Without explicit treatment of **Non-State Threat Accounts**, source compromise undermines deception-aware source review and defensive escalation review; the lesson builds the habit to separate defensive awareness from surveillance, handling, or operational security playbooks.

Source support. Inherited source-guide context for **Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits**: [ageint033]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **Non-State Threat Accounts**, inspect the original passages. No displayable curriculum annotation is available for [ageint033]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Non-State Threat Accounts**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the source descriptor, the bounded claim about **State Threat Accounts**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Non-State Threat Accounts** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits can be used while ignoring the rule to separate defensive awareness from surveillance, handling, or operational security playbooks.

Transfer task. Transfer **Non-State Threat Accounts** to a second module by preserving deception-aware source review and defensive escalation, changing the source evidence, and naming a new reviewer.

11.2.2.6 Lesson 6: AI-Era HUMINT: An Attributed Forecast and Its Counterarguments

Concept. **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments** treats human-source work as a governed relationship: validation, consent, reporting, source protection, and oversight—not contact activity.

Worked reasoning and limits. The underlying professional essay argues for continuing or growing HUMINT importance; a related summary is the same argument's source family, not independent confirmation. Increased digital fabrication might increase demand for contextual human reporting, but human reports can also repeat synthetic material, be mistranslated, or carry mistaken inferences. No comparative forecast, trend magnitude, or causal advantage is established by these records. A correct answer retains the argument and its assumptions, names what counterevidence would weaken it, and refuses to equate human origin, in-person contact, or lack of compromise indicators with truth.

Why it matters. Analysts use **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments** to separate defensive awareness from surveillance, handling, or operational security playbooks. A defensible treatment names the judgment it enables for deception-aware source review and defensive escalation review, the proof limit that source compromise would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments**: [ageint019] and [ageint034]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981].

Evidence to inspect. For **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments**, inspect the original passages. Curriculum annotation for [ageint019]: By Thomas Mulligan, a researcher at the RAND Corporation who served in CIA during 2008–14. Curriculum annotation for [ageint034]: Thomas Mulligan is a researcher at the RAND Corporation and former CIA officer. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI-Era HUMINT**, build a **analytic note with hypotheses, evidence table, confidence, and dissent fields** for this deception-aware source review and defensive escalation topic. The artifact must name the source descriptor, the bounded claim about **AI-Era HUMINT**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments** work as a **source-risk and validation ethics worksheet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that AI-Era HUMINT: An Attributed Forecast and Its Counterarguments is optional whenever separate defensive awareness from surveillance, handling, or operational security playbooks feels inconvenient.

Transfer task. Transfer **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments** to a second module by preserving deception-aware source review and defensive escalation, changing the source evidence, and naming a new reviewer.

11.2.3 Source Protection and CI Integration worked safe example: synthetic inputs, evidence, and review

Worked example: a sample research lab reviews a synthetic source-quality anomaly after a disputed report. [ageint238]; [ageint241].

Contextual source routes. For module 6's worked-example section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **human-source literacy and source protection**. Learners use a **source-risk and validation ethics worksheet** and keep this boundary visible: No elicitation, impersonation, covert contact, or operational source-management procedures; all cases use classroom fixtures.

Frame. The classroom question centers on **Source-Quality Anomalies: Competing Explanations and Protected**. Excluded actions stay explicit, and the **Structured-Judgment Lens** planning question is: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?

Inputs. For the **Source-Quality Anomalies: Competing Explanations and Protected** scenario, use toy download logs with an unusual hour, an authorized backup roster covering that hour, a second scheduled backup, two conflicting report versions, and no edit history. The Structured-Judgment Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Source-Quality Anomalies: Competing Explanations and Protected**, students first preserve version identifiers and separate access timing from content change; then compare scheduled backup, transcription error, and unauthorized modification hypotheses; use the second backup as a benign timing control. Do not infer motive from an unusual hour; stop person-level inquiry and hand the minimized version discrepancy through the supplied protected-review channel. Pause whenever an inference about Source-Quality Anomalies: Competing Explanations and Protected appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a challenge memo treating backup as an explanation for timing, leaving the report discrepancy unresolved pending edit history, and retaining both versions and alternative hypotheses for the instructor; no insider accusation or claim of proven compromise is warranted Retain it as the **source-risk and validation ethics worksheet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Source-Quality Anomalies: Competing Explanations and Protected** as "Structured-Judgment Lens confirms it" is not enough. The revision ties the claim to deception-aware source review and defensive escalation, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Source-Quality Anomalies: Competing Explanations and Protected** records the defensible claim, the assumption

most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

11.2.4 Source Protection and CI Integration practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Structured-Judgment Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

Contextual source routes. For module 6's practice-sequence section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Source-Quality Anomalies: Competing Explanations and Protected, Compartmentation and need-to-know governance, Polygraph and Lie-Detection Claims: Physiology Is Not Truth; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Counterintelligence and Source-Integrity Defense** lane.
2. Frame	Answer the lens question: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Source-Quality Anomalies: Competing Explanations and Protected: analytic note with hypotheses, evidence table, confidence, and dissent fields.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the source-risk and validation ethics worksheet fields for Source-Quality Anomalies: Competing Explanations and Protected.	Unit profile note.	Evidence artifacts include validation note, pressure-risk checklist.
4. Challenge	Test the misconception that Source-Quality Anomalies: Competing Explanations and Protected can be used while ignoring the rule to separate defensive awareness from surveillance, handling, or operational security playbooks.	Failure-mode note.	The artifact applies the key distinction: separate defensive awareness from surveillance, handling, or operational security playbooks.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

11.2.4.1 Source Protection and CI Integration instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. [ageint238]; [ageint241].

11.2.4.2 Source Protection and CI Integration extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 11.

Have learners swap artifacts and apply the **Structured-Judgment Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.2.5 Source Protection and CI Integration knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 11.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Source-Quality Anomalies: Competing Explanations and Protected**.
2. Transfer the **Structured-Judgment Lens** artifact from **Source-Quality Anomalies: Competing Explanations and Protected** to the final topic, **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Counterintelligence and Source-Integrity Defense** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which explanation preserves uncertainty without ignoring a possible compromise signal?
5. Correct this misconception: that Source-Quality Anomalies: Competing Explanations and Protected can be used while ignoring the rule to separate defensive awareness from surveillance, handling, or operational security playbooks.

11.2.5.1 Source Protection and CI Integration answer quality rubric: source evidence, uncertainty, and safe transfer

Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Source-Quality Anomalies: Competing Explanations and Protected** without source evidence, uncertainty, or a safe transfer task.

11.3 Source Protection and CI Integration assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 11.

11.3.1 Source Protection and CI Integration evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 11.

11.3.2 Source Protection and CI Integration transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 11.

11.3.2.1 Source Protection and CI Integration lineage and source tradition: profile, concepts, and first anchors This sits in the **Counterintelligence and Source-Integrity Defense** lineage: defending institutions, sources, and judgments against deception, insider risk, foreign-intelligence targeting, and source contamination. [ageint238]; [ageint241].

11.3.2.2 Source Protection and CI Integration working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 11.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**, with provenance and reviewability throughout.

11.3.2.3 Source Protection and CI Integration knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** minimized fictional access records, report lineage, source-quality discrepancies, and protected reporting rules. [ageint238]; [ageint241].
- **Transforms:** distinguish anomaly from compromise, test benign alternatives, preserve provenance, minimize exposure, and route independent review.
- **Outputs:** non-accusatory source-integrity judgment, protected evidence note, correction or hold, and accountable reviewer disposition.
- **Failure modes:** suspicion as identity or guilt, relationship trust as accuracy, unauthorized contact, or punitive inference from screening signals.

11.3.2.4 Source Protection and CI Integration transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 11.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.
- **Evidence contract:** keep the **Counterintelligence and Source-Integrity Defense** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as non-accusatory source-integrity judgment, protected evidence note, correction or hold, and accountable reviewer disposition that another reviewer can audit.

11.3.2.5 Source Protection and CI Integration profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 11.

The matched profile emphasizes defending institutions, sources, and judgments against deception, insider risk, foreign-intelligence targeting, and source contamination. The method stack is threat awareness, source-descriptor audit, corroboration, anomaly review, red-team challenge, and protected disclosure paths; the local topic cluster is **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.3 Source Protection and CI Integration evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 11.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Counterintelligence and Source-Integrity Defense** profile tells reviewers what evidence is strong enough for the module artifact built around **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.3.1 Source Protection and CI Integration guide source spine: inherited keys and local citation roles Primary guide citations: [ageint238]; [ageint241]; [ageint266]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint307]; [ageint305]; [ageint304]; [ageint029]; [ageint033]; [ageint019]; [ageint034].

11.3.3.2 Source Protection and CI Integration verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint238]; [ageint241].

Tier	What counts	How it is used
Source guide	[ageint238]; [ageint241]; [ageint266]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint307]; [ageint305]; [ageint304]; [ageint029]; [ageint033]; [ageint019]; [ageint034].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 6's source-canon section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance** and [ageint238]; [ageint241], but only directly verified source URLs are encoded as citations.

11.3.3.3 Source Protection and CI Integration intelligence practice lens: evidence artifact and safety check Practice lens: **Structured-Judgment Lens** for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. [ageint238]; [ageint241].

Planning question: Which assumptions, alternatives, confidence statements, and source limits must stay visible for review?

Evidence artifact: analytic note with hypotheses, evidence table, confidence, and dissent fields.

Validation rule: separate raw reporting, inference, judgment, and recommendation before synthesis. Applied to **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

Handoff contract: handoff preserves alternatives, uncertainty, caveats, and revision history for downstream modules.

Safety check: avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence.

11.3.3.4 Source Protection and CI Integration runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 11.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	6.99	6.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Source Protection and CI Integration to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Bounded autonomy, procurement, incident-response, and assurance studio	6.101	6.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Source Protection and CI Integration	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Model-card, recoverability, retention, and learner-support evidence package	6.102	6.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Source Protection and CI Integration	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Source-Quality Anomalies: Competing Explanations and Protected	6.1	6.1 source title transformed into safe curriculum treatment; original: Source-Quality Anomalies: Competing Explanations and Protected	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Compartmentation and need-to-know governance	6.2	6.2 source title transformed into safe curriculum treatment; original: Human-Source Compartmentation: Access, Corroboration, and Protection	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Polygraph and Lie-Detection Claims: Physiology Is Not Truth	6.3	6.3 Polygraph and Lie-Detection Claims: Physiology Is Not Truth	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy	6.4	6.4 Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits	6.5	6.5 Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
AI-Era HUMINT: An Attributed Forecast and Its Counterarguments	6.6	6.6 AI-Era HUMINT: An Attributed Forecast and Its Counterarguments	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

11.3.3.5 Source Protection and CI Integration reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 11.

Lesson topic	Practice lens	Evidence artifact	Safety check
Source-Quality Anomalies: Competing Explanations and Protected	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Compartmentation and need-to-know governance	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Polygraph and Lie-Detection Claims: Physiology Is Not Truth	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence
AI-Era HUMINT: An Attributed Forecast and Its Counterarguments	Structured-Judgment Lens	analytic note with hypotheses, evidence table, confidence, and dissent fields	avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence

11.3.3.6 Source Protection and CI Integration annotated source ledger: real titles and local contribution Each source cited by this **Counterintelligence and Source-Integrity Defense** module is paired below with its real title and a one-line note on what it contributes to **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

Source	Cited work	Curriculum annotation	Status
[ageint238]	Recommendation on the Ethics of Artificial Intelligence	The official UNESCO page for the Recommendation on the Ethics of Artificial Intelligence, the first global standard-setting instrument on AI ethics, adopted in 2021 and applicable to all 194 member states. It outlines four core values, including human rights protection and environmental flourishing, and ten guiding principles such as proportionality, privacy, transparency, and fairness.	verified source-guide; annotation metadata, not claim verification
[ageint241]	Modernised Convention 108	Official Council of Europe Convention 108+ source.	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint266]	PROV Overview	A W3C Working Group Note from 2013 that provides an overview and roadmap for the PROV family of specifications for representing and exchanging provenance information on the web. It defines provenance as information about the entities, activities, and people involved in producing data, used to assess quality, reliability, and trustworthiness.	verified source-guide; annotation metadata, not claim verification
[ageint274]	CAST Universal Design for Learning Guidelines version 3.0	The official CAST website for the Universal Design for Learning (UDL) Guidelines version 3.0, released in 2024. The framework offers research-based guidance for designing inclusive learning environments and is organized around three principles: Engagement (motivation and emotional support), Representation (accessible presentation of information), and Action and Expression (diverse means of participation and communication).	verified source-guide; annotation metadata, not claim verification
[ageint278]	Recommendation of the Council on Public Procurement	The OECD Recommendation of the Council on Public Procurement (OECD/LEGAL/0411), a legal instrument adopted by the OECD Council in 2015 on the proposal of the Public Governance Committee. It frames public procurement as a pillar of strategic governance and service delivery and sets out principles for governments to follow.	verified source-guide; annotation metadata, not claim verification
[ageint280]	NIST SP 800-61 Rev. 3: Incident Response Recommendations and Considerations for Cybersecurity Risk Management	NIST SP 800-61 Rev. 3, published April 2025, integrates incident response guidance into broader cybersecurity risk management aligned with the NIST Cybersecurity Framework 2.0, superseding the 2012 Rev. 2. The publication addresses cyber threat information sharing, incident handling and management practices, and procedures for detecting, responding to, and recovering from security incidents.	verified source-guide; annotation metadata, not claim verification
[ageint287]	Datasheets for Datasets	A 2018 arXiv paper proposing 'datasheets for datasets,' a standardized documentation framework for machine learning datasets modeled on electronic component datasheets. The authors argue the field lacks consistent dataset documentation, which creates risk in high-stakes applications, and propose that datasets be accompanied by documentation covering motivation, composition, collection process, recommended uses, and test results.	verified source-guide; annotation metadata, not claim verification
[ageint288]	Algorithmic Transparency Recording Standard Hub	A GOV.UK collection page serving as the hub for the UK Algorithmic Transparency Recording Standard (ATRS), maintained by the Government Digital Service. It provides a standardized template for documenting public-sector use of algorithmic tools, completion guidance, policy on scope and compliance, and a searchable repository of published transparency records.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint295]	M-25-22: Driving Efficient Acquisition of Artificial Intelligence in Government	OMB Memorandum M-25-22 (April 3, 2025), Driving Efficient Acquisition of Artificial Intelligence in Government, issued under Executive Order 13960 and related directives. It provides guidance to federal agencies for acquiring effective and trustworthy AI in a timely, cost-effective manner, and rescinds and replaces earlier memorandum M-24-18.	verified source-guide; annotation metadata, not claim verification
[ageint307]	ICS Recommended Practices	Official CISA Industrial Control Systems recommended practices page for defensive ICS/OT safety, resilience, and incident-preparation guidance.	original source-guide; annotation metadata, not claim verification
[ageint305]	DevSecOps	Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support.	original source-guide; annotation metadata, not claim verification
[ageint304]	Secure Software Development Framework (SSDF) Version 1.1: Recommendations for Mitigating the Risk of Software Vulnerabilities	NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences.	verified source-guide; annotation metadata, not claim verification
[ageint029]	Agent Handling in Counterintelligence / PDF	A roughly 28-page Scribd document titled “Agent Handling in Counterintelligence” providing an educational overview of intelligence operations. It surveys the roles of case officers in managing sources, recruitment and training of agents, protective measures such as fronts and cutouts, agent classifications including unwitting sources, and counterintelligence methods for identifying foreign operatives and reducing security breaches.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint033]	The Counterintelligence Threat from Non-State Actors	No displayable curriculum annotation; see original work for scope.	original source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint019]	Espionage in Our AI Future: Why Human Intelligence Still Matters - CSI	By Thomas Mulligan, a researcher at the RAND Corporation who served in CIA during 2008–14.	original source-guide; annotation metadata, not claim verification
[ageint034]	Studies in Intelligence Vol. 70, No. 1 (Extracts, March 2026) - CSI	Thomas Mulligan is a researcher at the RAND Corporation and former CIA officer.	original source-guide; annotation metadata, not claim verification

Where this sits. This module’s overview is Section 11; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

11.3.4 Source Protection and CI Integration governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 11.

11.3.5 Source Protection and CI Integration analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 6's governance-boundary section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Counterintelligence and Source-Integrity Defense** for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. [ageint238]; [ageint241].

Curriculum topic spine: Source-Quality Anomalies: Competing Explanations and Protected, **Compartmentation and need-to-know governance**, **Polygraph and Lie-Detection Claims: Physiology Is Not Truth**. **Recorded source cluster; inspection and scope limits apply:** [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]; [Central Intelligence Agency, 2009]; [Jr., 2007]; [Burkett, 2013].

Conceptual depth: defending institutions, sources, and judgments against deception, insider risk, foreign-intelligence targeting, and source contamination.

Method stack: threat awareness, source-descriptor audit, corroboration, anomaly review, red-team challenge, and protected disclosure paths.

Composability contract: identity, access, reporting, corroboration, caveats, and confidence are modeled independently so defensive review can happen without exposure.

Known failure modes: source compromise, deception acceptance, identity overconfidence, insider blind spots, and collapsing CI concerns into undifferentiated IT-security triage.

Defensive boundary: CI content supports defensive awareness, source protection, and analytic integrity; it does not provide surveillance or handling playbooks. Applied to **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

Anchor	Why it matters here
[National Counterintelligence and Security Center, 2024]	Official strategy for defensive CI integration, foreign-intelligence threat awareness, strategic advantage protection, and future readiness. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.
[Central Intelligence Agency, 2009]	Official structured analytic techniques primer for bias checks, alternatives, and warning analysis. Checked as of 2026-05-21; role: curriculum_anchor.
[Jr., 2007]	Foundational analytic cognition source for bias, mental models, and structured reasoning. Checked as of 2026-06-06; role: curriculum_anchor.
[Burkett, 2013]	A CIA Studies in Intelligence analyst essay arguing that the traditional MICE recruitment-motivation model (Money, Ideology, Compromise, Ego) is better understood through Cialdini's influence principles reframed as RASCLS (Reciprocation, Authority, Scarcity, Commitment/Consistency, Liking, Social Proof), grounding the historical and conceptual lineage of HUMINT recruitment frameworks. Checked as of 2026-06-08; role: curriculum_anchor.

11.3.5.1 Source Protection and CI Integration evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Counterintelligence and Source-Integrity Defense** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint238]; [ageint241].

11.3.6 Source Protection and CI Integration agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 11.

AGEINT translation is bounded by the **Counterintelligence and Source-Integrity Defense** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.6.1 Source Protection and CI Integration permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 11.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.6.2 Source Protection and CI Integration excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint238]; [ageint241] and **Source-Quality Anoma-**

lies: Competing Explanations and Protected; Compartmentation and need-to-know governance. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

11.3.7 Source Protection and CI Integration governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 11.

Governance is practiced as a gate on the **Counterintelligence and Source-Integrity Defense** lane. Learners use the **Structured-Judgment Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.7.1 Source Protection and CI Integration governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint238]; [ageint241].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Counterintelligence and Source-Integrity Defense** failure modes and the **Structured-Judgment Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

11.3.7.2 Source Protection and CI Integration evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Structured-Judgment Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.7.3 Source Protection and CI Integration current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. [ageint238]; [ageint241].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_ncsc_counterintelligence_strategy` for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**?	The National Counterintelligence Strategy; lane `counterintelligence_source_integrity`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; Official strategy for defensive CI integration, foreign-intelligence threat awareness, strategic advantage protection, and future readiness.
What does the module inherit from `official_odni_eo_12333` for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**?	Executive Order 12333: United States Intelligence Activities (historical DCI-era text); lane `legal_oversight`; checked 2026-11-06.	analytic note with hypotheses, evidence table, confidence, and dissent fields; National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law.
What does the module inherit from `official_odni_icd_206` for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**?	Intelligence Community Directive 206: Sourcing Requirements for Disseminated Analytic Products; lane `analytic_tradecraft`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; Official sourcing directive for traceability, citations, source descriptors, and source summaries.
What does the module inherit from `official_odni_icd_203` for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**?	Intelligence Community Directive 203: Analytic Standards; lane `source_quality_spine`; checked 2026-05-21.	analytic note with hypotheses, evidence table, confidence, and dissent fields; source-quality triangulation and claim-boundary review
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 11; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

11.3.8 Source Protection and CI Integration assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 11.

11.3.9 Source Protection and CI Integration assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 11.

11.3.9.1 Source Protection and CI Integration capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance** and [ageint238]; [ageint241].

11.3.9.2 Source Protection and CI Integration instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance** and [ageint238]; [ageint241].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

11.3.9.3 Source Protection and CI Integration assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Source-Quality Anomalies: Competing Explanations and Protected; **Compartmentation and need-to-know governance**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: separate raw reporting, inference, judgment, and recommendation before synthesis.
Polygraph and Lie-Detection Claims: Physiology Is Not Truth; **Double-Agent Accounts: Defensive Deception and Source-Integrity Literacy**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Non-State Threat Accounts: Evidence, Attribution, and Disclosure Limits; **AI-Era HUMINT: An Attributed Forecast and Its Counterarguments**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: avoid policy advocacy, certainty inflation, source laundering, and claims without traceable evidence.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

11.3.10 Source Protection and CI Integration refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint238]; [ageint241] and **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**.

11.3.10.1 Source Protection and CI Integration refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. The local signals begin with [ageint238]; [ageint241].

11.3.10.2 Source Protection and CI Integration claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**, and the source spine for these checks begins with [ageint238]; [ageint241].

11.3.11 Source Protection and CI Integration reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint238]; [ageint241].

Contextual source routes. For module 6's review-checklist section, the **Counterintelligence and Source-Integrity Defense** catalog routes include [National Counterintelligence and Security Center, 2024]; [National Archives and Records Administration, 1981]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance**. [ageint238]; [ageint241].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.

- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

11.3.12 Source Protection and CI Integration learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Source-Quality Anomalies: Competing Explanations and Protected; Compartmentation and need-to-know governance** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint238]; [ageint241].

Section 2, Section 8, Section 10, Section 12

12 SIGNALS INTELLIGENCE (SIGINT)

12.1 SIGNALS INTELLIGENCE (SIGINT) learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 12.

12.1.1 signals-intelligence governance discipline spine: domain question and learning focus

Navigation. Parent section: Section 12.
This unit teaches **signals-intelligence governance**. SIGINT is taught as legal, technical, and minimization-aware interpretation of signal-derived evidence, not interception procedure.

12.1.2 signals-intelligence governance source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 12.
Use source-guide citations for discipline concepts and directive/legal anchors for authority, minimization, retention, and dissemination claims.

12.1.3 signals-intelligence governance practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 12.
The recurring practice artifact is a **signal-evidence minimization card** that draws on authority boundary note, minimization field, signal-quality caveat, and dissemination restriction. The unit keeps its learning spine explicit. Classroom packet: instructor-generated signal records show a fictional beacon observed at 10:00 and absent at 10:05; a receiver-status card records receiver downtime from 10:04 to 10:06. The scope card permits analysis of these records only.

1. Separate observed samples, missing samples, receiver health, and collection scope; remove the irrelevant device-owner field.
2. Align timestamps and compare transmitter shutdown with receiver failure as explanations.
3. Use a second toy beacon also absent during receiver downtime as the negative control.
4. Produce a minimization card stating that reception was interrupted but transmitter shutdown and operator intent are unresolved; technical visibility supplies neither collection authority nor permission to disseminate identifiers. Stop if the exercise would require interception, decryption, or expanded collection. Hand the timing gap and scope question to the instructor, not to a live operator.

12.1.4 signals-intelligence governance safety boundary: accountable, synthetic, and evidence-bounded limits

No interception, decryption, surveillance target selection, or collection-expansion guidance.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint255]; [ageint258].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint255]; [ageint258].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint255]; [ageint258].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint255]; [ageint258].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Collection Management and Multi-INT Requirements Discipline. Core anchors: [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Conceptual focus: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable. **Practice lens:** Requirements-to-Evidence Lens; What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit? [ageint255]; [ageint258].

12.1.5 SIGNALS INTELLIGENCE (SIGINT) visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 41 and Figure 42 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 11, Section 13.

12.1.6 SIGNALS INTELLIGENCE (SIGINT) module roster and source-lane inventory: citations, lanes, and learner route

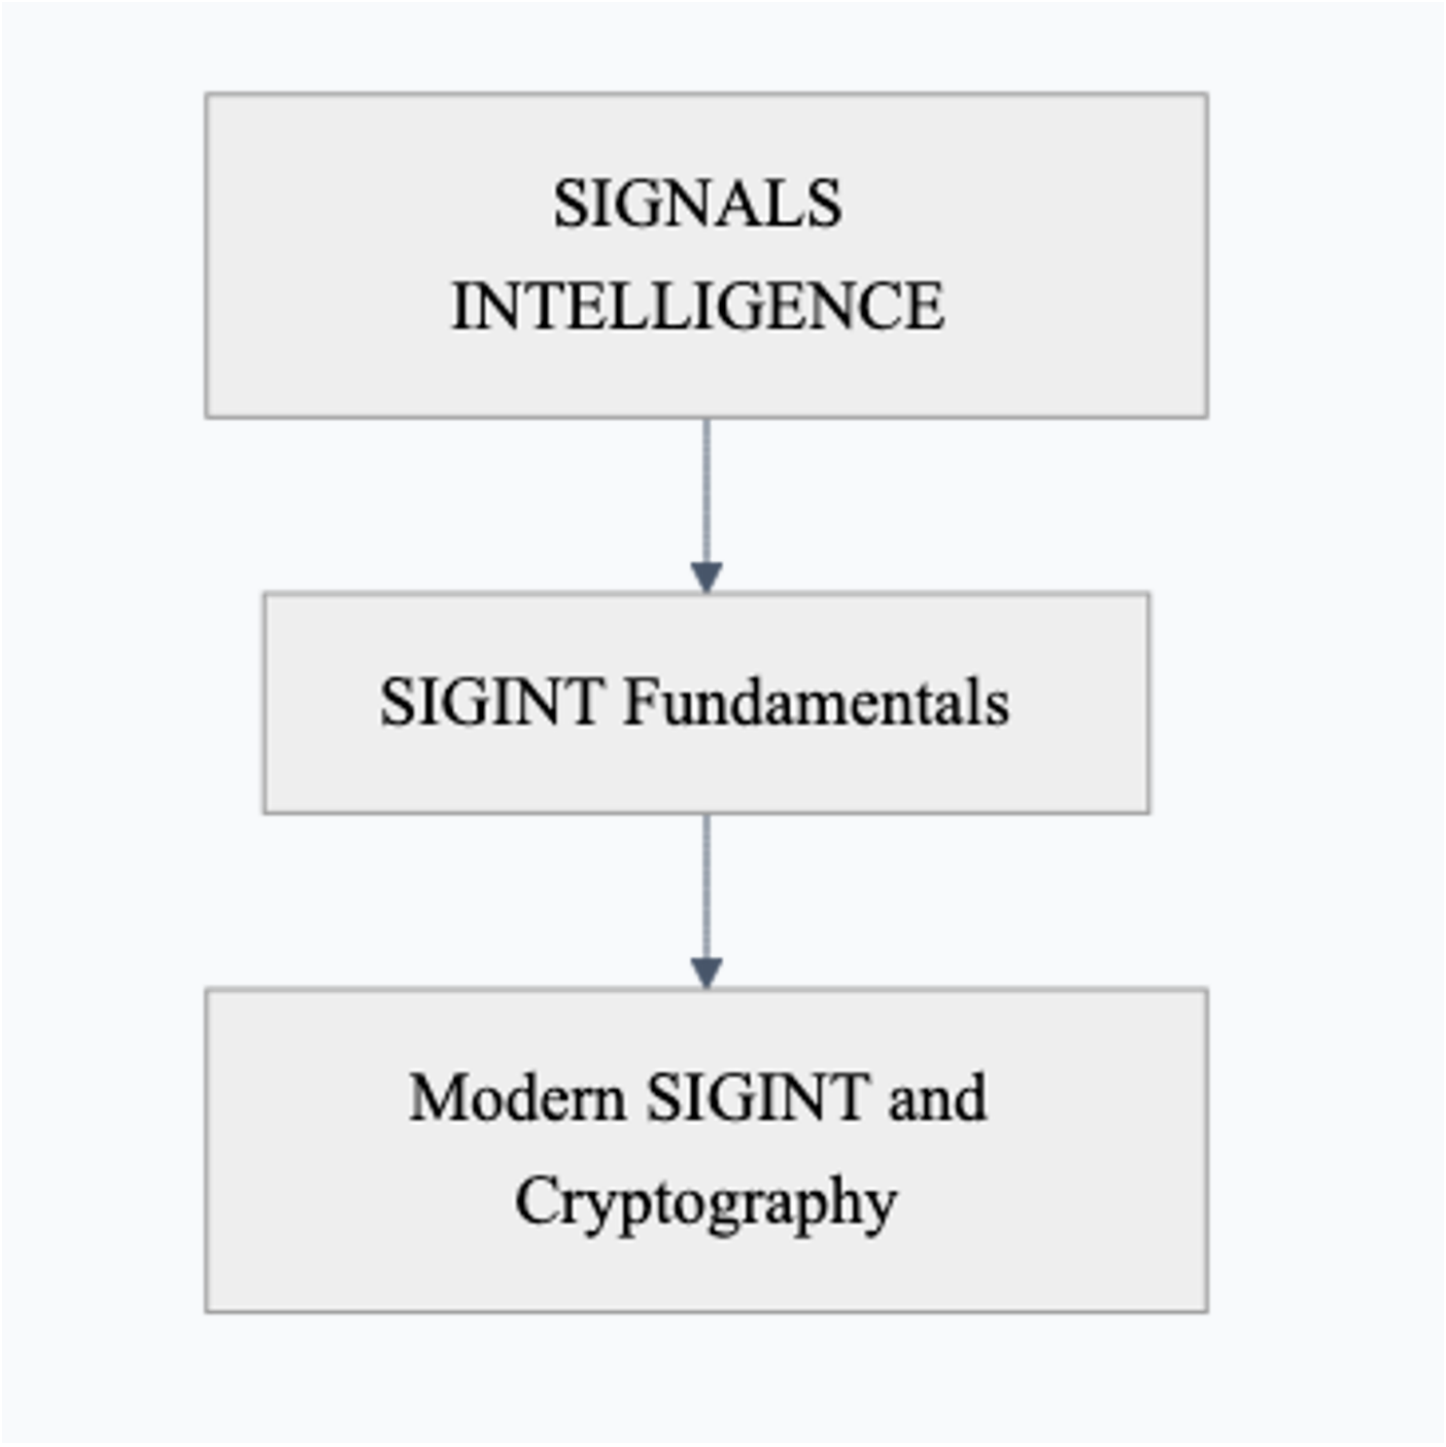

Figure 41: The SIGNALS INTELLIGENCE (SIGINT) module map traces the part's chapters as a linear reading sequence. Its reader value is to make 2 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last visible at a glance, with the signals intelligence sigint section as the source section and defensive review as the boundary.

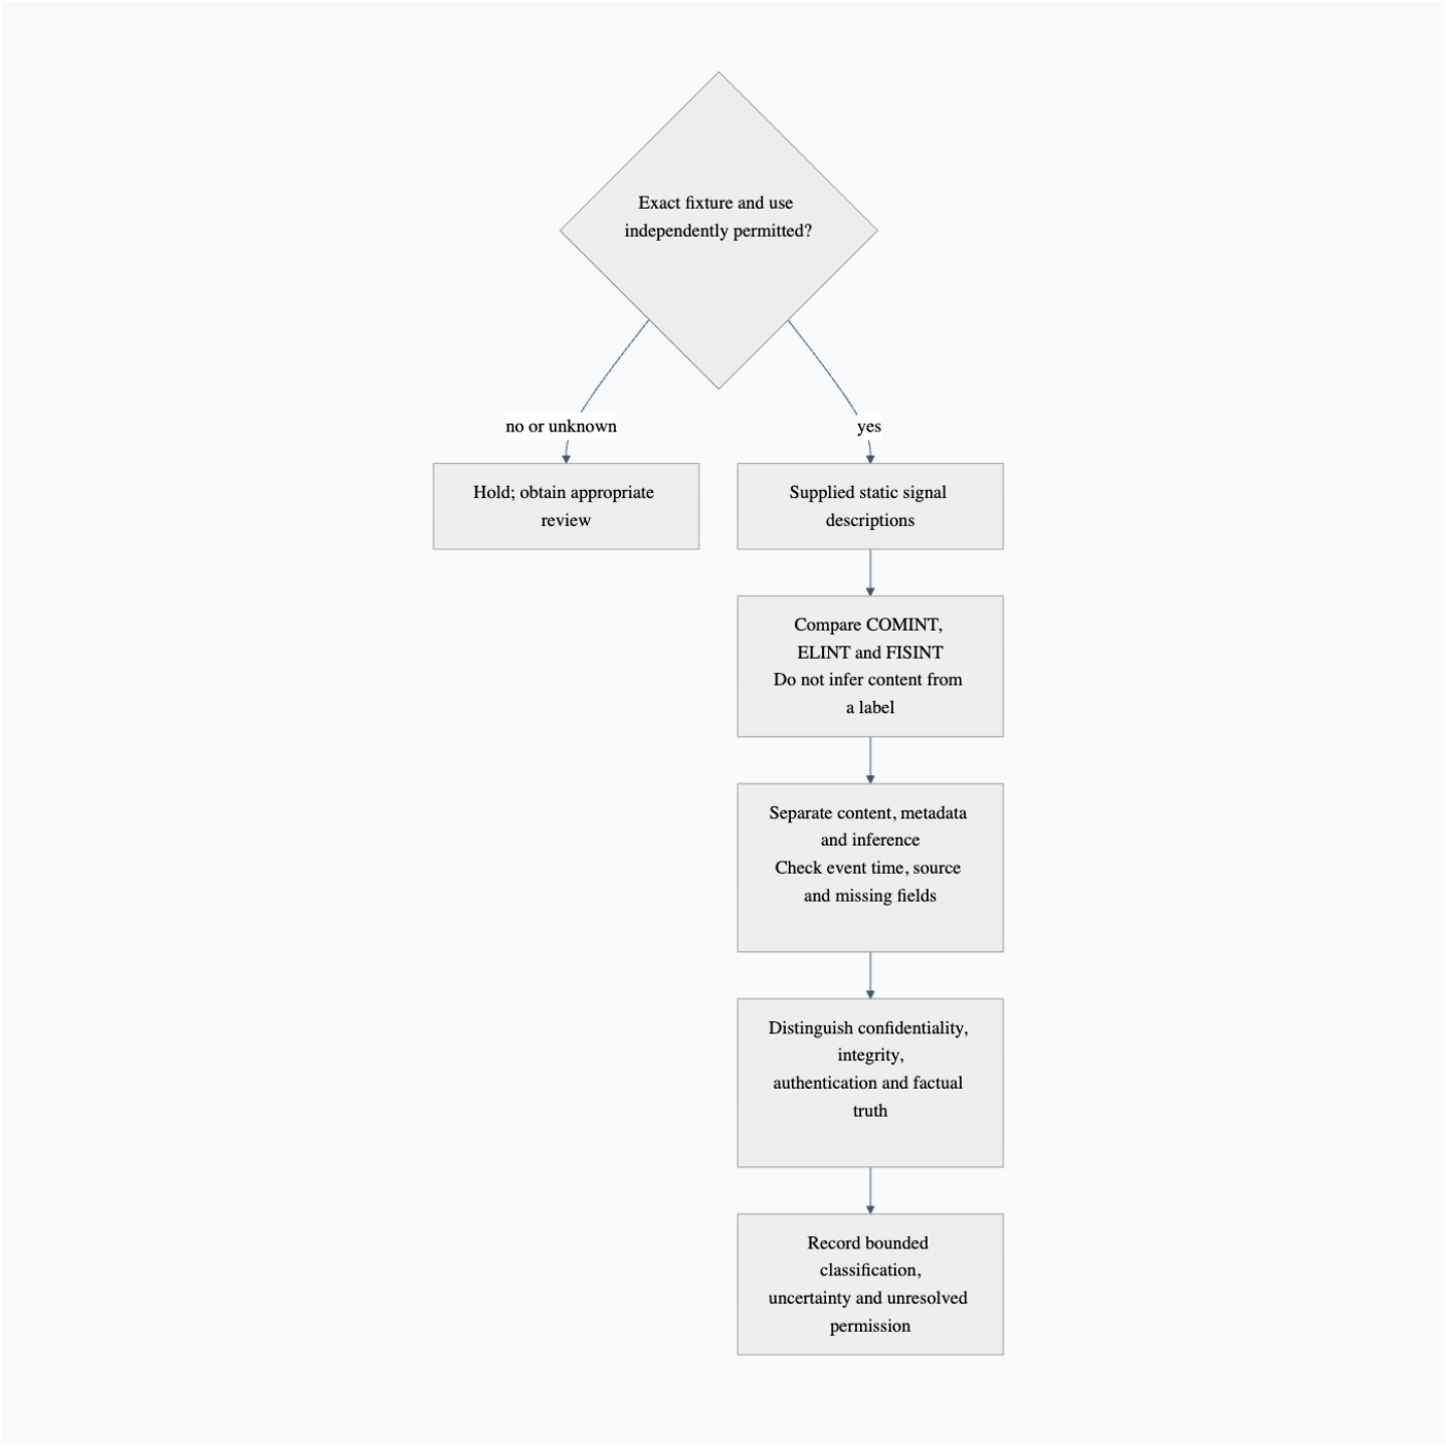

Figure 42: Conceptual SIGINT literacy map for supplied static records, not collection authority or an operational processing stack. Public metadata is not a permission exemption. Encryption and signatures concern specified properties under assumptions, not the truth or intent of a message. No reception, interception, cryptanalytic attack or endpoint exploitation is exercised.

Module	Section reference	Source spine
SIGINT Fundamentals	Section 13	[ageint255]; [ageint258]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint036]; [ageint037]; [ageint038]; [ageint039]; [ageint040].
Modern SIGINT and Cryptography	Section 14	[ageint258]; [ageint260]; [ageint261]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint041]; [ageint042]; [ageint027]; [ageint028]; [ageint043]; [ageint044]; [ageint045]; [ageint046]; [ageint018]; [ageint298]; [ageint297]; [ageint309]; [ageint310]; [ageint300].

13 SIGINT Fundamentals

13.0.1 SIGINT Fundamentals figures and course links: visual evidence, source flow, and navigation

The module uses Figure 43 and Figure 41 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 12, Section 14.
This module teaches the **Collection Management and Multi-INT Requirements Discipline** lane through a bounded, source-backed coursebook chapter. [ageint255]; [ageint258].

13.1 Collection Management and Multi-INT Requirements Discipline frame for SIGINT Fundamentals: source context, topic focus, and reader task

Navigation. Parent section: Section 13.

13.1.1 SIGINT Fundamentals orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 13.

13.1.2 SIGINT Fundamentals conceptual primer: source context, core model, and reader task

This chapter teaches collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.
The central distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Core topics include **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise; Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint255]; [ageint258].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **SIGINT metadata minimization and authority** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

13.1.3 SIGINT Fundamentals learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 13.

- Connect **SIGINT metadata minimization and authority and SIGINT legal-authority and communications-security governance exercise** to **Collection Management and Multi-INT Requirements Discipline** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures.

13.1.4 SIGINT Fundamentals core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 13.

Term	Working definition
Priority	the relative importance of an intelligence question
Source discipline	a broad evidence channel such as HUMINT, SIGINT, GEOINT, OSINT, or FININT
Minimization	the rule that limits acquisition, retention, or use of unnecessary information
Source protection	the duty to reduce risk to people, methods, and sensitive relationships
Evaluation	the feedback step that tests whether the evidence satisfied the requirement
Gray-zone indicator	an observed feature potentially relevant to ambiguous coercion; neither coercive intent nor an armed-conflict threshold follows from the label
Proxy pattern	a relationship pattern that may motivate a sponsorship hypothesis but does not establish sponsorship, direction, or operational control

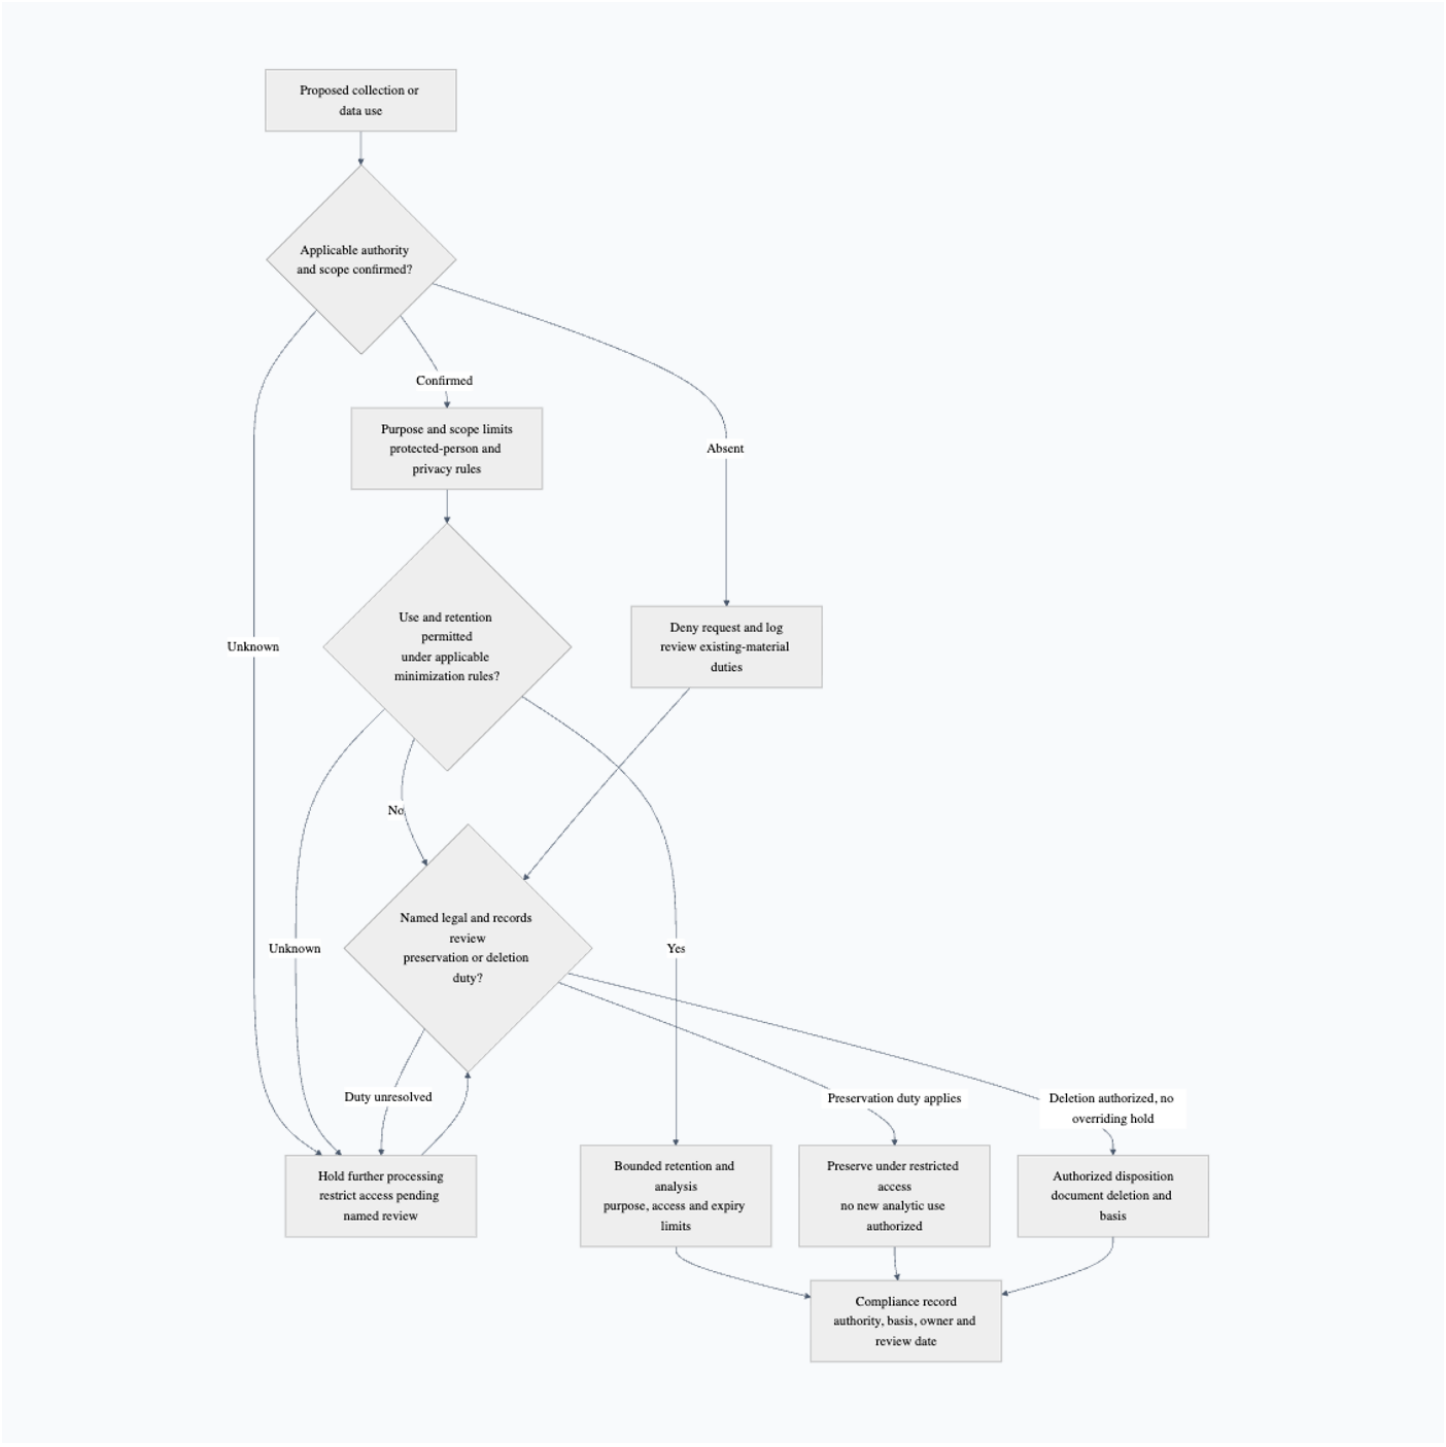

Figure 43: Authority and minimization decisions require applicable law, purpose limits, and named review; this schematic is not legal advice or collection authorization. Unknown authority holds further processing rather than implying permission or automatic deletion. Non-pertinent or restricted material enters disposition review: preserve with restricted access where a duty applies, otherwise delete only when authorized, documenting the decision.

13.2 Requirements-to-Evidence Lens path for SIGINT Fundamentals: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 13.

13.2.1 SIGINT Fundamentals practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 13.

13.2.2 SIGINT Fundamentals topic lessons: source-backed concepts and transfer tasks

SIGINT Fundamentals builds collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The sequence opens with **SIGINT metadata minimization and authority**, **SIGINT legal-authority and communications-security governance exercise**, **Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 41; module overview Section 13; curriculum atlas Section 2.

Contextual source routes. For module 7's topic-lessons section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

13.2.2.1 Lesson 1: SIGINT metadata minimization and authority **Concept. SIGINT metadata minimization and authority** frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. COMINT concerns intelligence from communications, including content and relevant traffic/metadata; ELINT concerns non-communications electromagnetic emissions such as radar signals, not any electronic file or cryptographic digital signature. An emission's characteristics, an assessed emitter, a person, and intent are progressively different claims, not synonymous observations. **Completed offline synthetic classification:** provided card C contains a fictional message and send time (communications content plus metadata), card E describes an invented radar-like emission (ELINT-type subject matter), and card S reports a document-signature check (cryptographic authentication, not ELINT); none involves actual interception. On challenge, C's timestamp is marked unsynchronized, so the analyst keeps the classification but withdraws the exact event-time inference and holds any consequential timing judgment. The NSA overview supports SIGINT orientation; finer operational definitions/remits need the applicable dated doctrine, and classroom classification creates no authority to acquire signals.

Why it matters. Without explicit treatment of **SIGINT metadata minimization**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **SIGINT metadata minimization and authority**: [ageint035]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **SIGINT metadata minimization**, inspect the original passages. No displayable curriculum annotation is available for [ageint035]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **SIGINT metadata minimization**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape the same topic work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **SIGINT metadata minimization** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

13.2.2.2 Lesson 2: SIGINT legal-authority and communications-security governance exercise **Concept. SIGINT legal-authority and communications-security governance exercise** frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. The inherited NSA catalog identifies a nine-volume European Axis SIGINT collection, which concerns wartime organizations and records rather than a modern operating manual. Separate the historical period described, the authoring body's perspective, archival custody, and later public release; a release date is not the date of the event. The source page was unavailable to direct inspection during this revision, so volume-level findings, completeness, and precise release dates remain unverified here. The defensible result is an identified historical collection and a bounded extraction plan, not assertions about unexamined volumes or a reconstruction of collection techniques.

Why it matters. Without explicit treatment of **SIGINT legal-authority**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **SIGINT legal-authority and communications-security governance exercise**: [ageint036]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **SIGINT legal-authority**, inspect the original passages. Curriculum annotation for [ageint036]: Volumes 1 - 9 of the European Axis Signal Intelligence in WWII documentation. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **SIGINT legal-authority**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **SIGINT legal-authority and communications-security governance**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **SIGINT legal-authority** work as a **signal-evidence minimization card** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **SIGINT legal-authority**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **SIGINT legal-authority** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

13.2.2.3 Lesson 3: Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise

Concept. Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. The inherited citation is a report about release of Robert J. Hanyok's historical study covering 1945–1975, not itself the complete underlying history or every contemporaneous intercept. A retrospective historian's reconstruction, a wartime report, and a policymaker's later testimony answer different evidentiary questions and must not be merged. In particular, an article summarizing a Tonkin conclusion cannot by itself prove the event claim or certify the full record's completeness; a historical judgment needs its identified passage, source basis, redactions, and alternatives examined. The supported classroom disposition is attributed secondary reporting with the underlying-event conclusion held pending the original record, not an unqualified historical verdict.

Why it matters. Analysts use **Spartans in Darkness** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise**: [ageint037]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Spartans in Darkness**, inspect the original passages. Curriculum annotation for [ageint037]: This Federation of American Scientists article reports on the NSA's declassification of a roughly 500-page historical study titled "Spartans in Darkness," which examines American signals intelligence during the Vietnam War from 1945 to 1975. Author Robert J. Hanyok documents that no second attack occurred during the 1964 Gulf of Tonkin Incident, contradicting prior official testimony, and also covers episodes such as the Tet Offensive and the Son Tay prison rescue. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Spartans in Darkness**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **Spartans in Darkness**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **Spartans in Darkness** work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Spartans in Darkness**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **Spartans in Darkness** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

13.2.2.4 Lesson 4: CIA NSA Historical Roles: SIGINT legal-authority and communications-security governance exercise

Concept. CIA NSA Historical Roles: SIGINT legal-authority and communications-security governance exercise frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. The inspected 20 March 2015 National Security Archive briefing distinguishes its editorial account from the declassified documents and identifies a CIA SIGINT history covering 1947–1970 [ageint039]. Its Document 2 is an Inspector General memorandum dated 22 August 1958, identified with CREST/NARA provenance; the archive describes Division D as a conduit for communications intelligence from NSA to CIA, illustrating that production, receipt, and institutional custody are distinct roles. This is an attributed archival description, not a fresh examination of the full memorandum or a present-day authority chart; author identity and missing/redacted content must remain unknown where withheld. The inherited 2018 blog is secondary context, not independent corroboration of the same underlying documents, and no collection technique is reconstructed.

Why it matters. CIA NSA Historical Roles matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **CIA NSA Historical Roles: SIGINT legal-authority and communications-security governance exercise**: [ageint038] and [ageint039]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **CIA NSA Historical Roles**, inspect the original passages. Curriculum annotation for [ageint038]: A January 2018 blog post on Open INT recounting the CIA's role in signals intelligence from roughly 1947 to 1970, noting that SIGINT is often associated with the NSA but the CIA also participated. It distinguishes communications intelligence from electronic intelligence and references declassified Cold War operations including U-2 collection and a Berlin communications-tapping effort. Curriculum annotation for [ageint039]: A 2015 briefing book from the National Security Archive, compiled by Jeffrey T. Richelson, presenting declassified documents on the CIA's signals intelligence activities from roughly 1947 to 1970. It documents the CIA's parallel SIGINT operations alongside the NSA during the Cold War, covering programs and collection efforts as well as recurring friction between the two agencies over mission overlap, budgets, and access to intelligence. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **CIA NSA Historical Roles**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **CIA NSA Historical Roles**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **CIA NSA Historical Roles** work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **CIA NSA Historical Roles**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Apply this module's safe boundary for **CIA NSA Historical Roles** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

13.2.2.5 Lesson 5: Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise

Concept. Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. In introductory historical vocabulary, a code substitutes representations for units of meaning using an agreed vocabulary, while a cipher transforms message symbols according to a rule, often controlled by a key; ordinary language can blur the distinction. Neither the label nor archival hosting establishes modern security, authenticity, or factual truth. Record the original title/author/date where available and distinguish them from release metadata; the inherited clipped sentence is not enough to establish the text's complete technical argument or period of applicability. A diagnostic answer rejects 'NSA-hosted therefore currently secure' and separates an archival teaching object from an approved modern algorithm and key-management system. No live decoding, interception, covert communication construction, or operational reuse is part of the lesson.

Why it matters. Analysts use **Friedman Cryptography Records** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review,

the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise**: [ageint040]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Friedman Cryptography Records**, inspect the original passages. No displayable curriculum annotation is available for [ageint040]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Friedman Cryptography Records**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **Friedman Cryptography Records**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **Friedman Cryptography Records** work as a **signal-evidence minimization card** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Friedman Cryptography Records**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Apply this module's safe boundary for **Friedman Cryptography Records** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

13.2.3 SIGINT Fundamentals worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic policy cell compares public indicators of hybrid pressure against an approved collection plan for a benign border-disruption exercise. [ageint255]; [ageint258].

Contextual source routes. For module 7's worked-example section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **signals-intelligence governance**. Learners use a **signal-evidence minimization card** and keep this boundary visible: No interception, decryption, surveillance target selection, or collection-expansion guidance.

Frame. The classroom question centers on **SIGINT metadata minimization and authority**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **SIGINT metadata minimization and authority** scenario, use a fictional freight-delay notice, a weather bulletin, interview H1 reporting the delay and H2 repeating H1, two toy signals absent during receiver downtime, and a scope card permitting only these supplied records. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **SIGINT metadata minimization and authority**, students first rank the question about disruption above the unsupported sponsorship allegation; then match each gap to a source discipline without tasking it, distinguish interview access and motivation from accuracy, and separate signal absence from collection authority; remove H2 and compare a second toy signal lost during downtime as controls. Stop any proposed contact or interception and send missing authority or evidence questions to the instructor. Pause whenever an inference about SIGINT metadata minimization and authority appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a requirements matrix recording disruption reports but unresolved cause and sponsorship, one underlying interview account rather than two independent sources, and an uninterpretable transmitter state during receiver downtime; no human contact, expanded collection, or signal observation confers authority Retain it as the **signal-evidence minimization card** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **SIGINT metadata minimization and authority** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to requirements decomposition and source-discipline fit, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **SIGINT metadata minimization and authority** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

13.2.4 SIGINT Fundamentals practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

Contextual source routes. For module 7's practice-sequence section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare SIGINT metadata minimization and authority, SIGINT legal-authority and communications-security governance exercise, Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Collection Management and Multi-INT Requirements Discipline** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for SIGINT metadata minimization and authority: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.

Move	Learner action	Output	Check
3a. Unit artifact	Add the signal-evidence minimization card fields for SIGINT metadata minimization and authority.	Unit profile note.	Evidence artifacts include authority boundary note, minimization field.
4. Challenge	Test the misconception that a named collection authority removes the minimization and retention limits on what may be kept.	Failure-mode note.	The artifact applies the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

13.2.4.1 SIGINT Fundamentals instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint258].

13.2.4.2 SIGINT Fundamentals extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 13. Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.2.5 SIGINT Fundamentals knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 13.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **SIGINT metadata minimization and authority**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **SIGINT metadata minimization and authority** to the final topic, **Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Collection Management and Multi-INT Requirements Discipline** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which gray-zone indicator changes the least-intrusive source choice without crossing into operational tasking?
5. Correct this misconception: that a named collection authority removes the minimization and retention limits on what may be kept.

13.2.5.1 SIGINT Fundamentals answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **SIGINT metadata minimization and authority** without source evidence, uncertainty, or a safe transfer task.

13.3 SIGINT Fundamentals assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 13.

13.3.1 SIGINT Fundamentals evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 13.

13.3.2 SIGINT Fundamentals transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 13.

13.3.2.1 SIGINT Fundamentals lineage and source tradition: profile, concepts, and first anchors This sits in the **Collection Management and Multi-INT Requirements Discipline** lineage: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. [ageint255]; [ageint258].

13.3.2.2 SIGINT Fundamentals working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 13.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**, with provenance and reviewability throughout.

13.3.2.3 SIGINT Fundamentals knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** accountable requirements, source-discipline choices, minimization rules, source-risk notes, and evaluation criteria. [ageint255]; [ageint258].
- **Transforms:** priority mapping, source-discipline fit, least-intrusive evidence selection, and feedback review.
- **Outputs:** requirements matrix, collection-limit note, source-quality card, and gap list.
- **Failure modes:** recruitment or interception drift, over-collection, weak minimization, and source exposure.

13.3.2.4 SIGINT Fundamentals transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 13.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.
- **Evidence contract:** keep the **Collection Management and Multi-INT Requirements Discipline** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as requirements matrix, collection-limit note, source-quality card, and gap list that another reviewer can audit.

13.3.2.5 SIGINT Fundamentals profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 13.

The matched profile emphasizes requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. The method stack is priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop; the local topic cluster is **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.3 SIGINT Fundamentals evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 13.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Collection Management and Multi-INT Requirements Discipline** profile tells reviewers what evidence is strong enough for the module artifact built around **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.3.1 SIGINT Fundamentals guide source spine: inherited keys and local citation roles Primary guide citations: [ageint255]; [ageint258]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint036]; [ageint037]; [ageint038]; [ageint039]; [ageint040].

13.3.3.2 SIGINT Fundamentals verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint255]; [ageint258].

Tier	What counts	How it is used
Source guide	[ageint255]; [ageint258]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint036]; [ageint037]; [ageint038]; [ageint039]; [ageint040].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 7's source-canon section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint258], but only directly verified source URLs are encoded as citations.

13.3.3.3 SIGINT Fundamentals intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint258].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

13.3.3.4 SIGINT Fundamentals runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 13.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	7.99	7.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind SIGINT Fundamentals to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	7.101	7.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for SIGINT Fundamentals	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	7.102	7.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for SIGINT Fundamentals	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT metadata minimization and authority	7.1	7.1 source title transformed into safe curriculum treatment; original: COMINT and ELINT: Content, Metadata, and Non-Communication Signals	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
SIGINT legal-authority and communications-security governance exercise	7.2	7.2 source title transformed into safe curriculum treatment; original: European Axis SIGINT Records: Wartime Scope and Archival Limits	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	7.3	7.3 source title transformed into safe curriculum treatment; original: Spartans in Darkness: Retrospective History versus Contemporaneous Reporting	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	7.4	7.4 source title transformed into safe curriculum treatment; original: CIA–NSA Historical Roles: Document Dates, Coordination, and Redactions	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	7.5	7.5 source title transformed into safe curriculum treatment; original: Friedman Cryptography Records: Historical Concepts, Not Modern Security Advice	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

13.3.3.5 SIGINT Fundamentals reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 13.

Lesson topic	Practice lens	Evidence artifact	Safety check
SIGINT metadata minimization and authority	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
CIA NSA Historical Roles: SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

13.3.3.6 SIGINT Fundamentals annotated source ledger: real titles and local contribution Each source cited by this **Collection Management and Multi-INT Requirements Discipline** module is paired below with its real title and a one-line note on what it contributes to **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

Source	Cited work	Curriculum annotation	Status
[ageint255]	Web of Things (WoT) Architecture 1.1	The W3C Recommendation for Web of Things Architecture 1.1, published in December 2023, defining an abstract architecture for interoperability across diverse Internet of Things platforms. It introduces core concepts including Things described by machine-readable Thing Descriptions, reusable Thing Models, and Consumers that interpret descriptions to interact via Properties, Actions, and Events.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint258]	OpenAPI Specification	The official OpenAPI Initiative publications page, serving as a central index for the OpenAPI Specification and related standards including the Arazzo and Overlay specifications. It provides access to multiple specification versions (2.0, 3.0, 3.1, and 3.2) and their corresponding downloadable schemas identified by release date, along with a registry of extensions, formats, media types, and other resources.	verified source-guide; annotation metadata, not claim verification
[ageint261]	RFC 9110: HTTP Semantics	RFC 9110, the official IETF standards document defining the core semantics and architecture of HTTP, published in June 2022 and consolidating nine earlier RFCs. It establishes terminology and protocol aspects shared across HTTP versions, including methods, status codes, header fields, content negotiation, conditional and range requests, authentication, and the http and https URI schemes.	verified source-guide; annotation metadata, not claim verification
[ageint279]	Open Contracting Data Standard	The documentation homepage for the Open Contracting Data Standard, version 1.1.5, maintained by the Open Contracting Partnership to support disclosure of government contracting data across the procurement lifecycle. It provides a common data model spanning planning, tender, award, contract, and implementation stages, along with a primer, implementation guidance, technical schemas, and validation tooling.	verified source-guide; annotation metadata, not claim verification
[ageint282]	AI Research: Security and Resilience	A NIST page on AI research focused on security and resilience, framing these as core characteristics of trustworthy AI under the NIST AI Risk Management Framework.	verified source-guide; annotation metadata, not claim verification
[ageint284]	Verifiable Credential Data Integrity 1.0	The W3C Recommendation for Verifiable Credential Data Integrity 1.0, published May 2025, defining mechanisms for ensuring the authenticity and integrity of verifiable credentials using cryptographic proofs. It specifies a process of data transformation, hashing, and proof generation, and a corresponding verification procedure, along with a proof data model containing properties such as type, verification method, purpose, and proof value.	verified source-guide; annotation metadata, not claim verification
[ageint289]	Guidance for Organisations Using the Algorithmic Transparency Recording Standard	This is a GOV.UK guidance page published by the Government Digital Service that instructs public sector organizations on completing the Algorithmic Transparency Recording Standard (ATRS) template and publishing their records to the GOV.UK repository. It applies both to central government bodies required to publish under mandatory policy and to other public sector bodies doing so voluntarily.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint291]	Revised 508 Standards and 255 Guidelines	Official documentation from the U.S. Access Board on the Revised 508 Standards and 255 Guidelines for information and communication technology accessibility. It establishes mandatory accessibility requirements for federal agencies and voluntary guidelines for telecommunications manufacturers, covering hardware, software, websites, electronic documents, and support services.	verified source-guide; annotation metadata, not claim verification
[ageint296]	Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile	NIST AI 600-1, the Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile, a cross-sectoral companion resource to the NIST AI RMF 1.0 issued pursuant to Executive Order 14110. It identifies risks that are unique to or amplified by generative AI and organizes suggested actions for managing those risks, mapped to the AI RMF functions.	verified source-guide; annotation metadata, not claim verification
[ageint035]	Signals Intelligence (SIGINT) Overview	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint036]	European Axis Signal Intelligence in World War II	Volumes 1 - 9 of the European Axis Signal Intelligence in WWII documentation.	original source-guide; annotation metadata, not claim verification
[ageint037]	NSA Releases History of American SIGINT and the Vietnam War	This Federation of American Scientists article reports on the NSA's declassification of a roughly 500-page historical study titled "Spartans in Darkness," which examines American signals intelligence during the Vietnam War from 1945 to 1975. Author Robert J. Hanyok documents that no second attack occurred during the 1964 Gulf of Tonkin Incident, contradicting prior official testimony, and also covers episodes such as the Tet Offensive and the Son Tay prison rescue.	verified source-guide; annotation metadata, not claim verification
[ageint038]	History of signals intelligence at the CIA - Open INT	A January 2018 blog post on Open INT recounting the CIA's role in signals intelligence from roughly 1947 to 1970, noting that SIGINT is often associated with the NSA but the CIA also participated. It distinguishes communications intelligence from electronic intelligence and references declassified Cold War operations including U-2 collection and a Berlin communications-tapping effort.	verified source-guide; annotation metadata, not claim verification
[ageint039]	The CIA and Signals Intelligence / National Security Archive	A 2015 briefing book from the National Security Archive, compiled by Jeffrey T. Richelson, presenting declassified documents on the CIA's signals intelligence activities from roughly 1947 to 1970. It documents the CIA's parallel SIGINT operations alongside the NSA during the Cold War, covering programs and collection efforts as well as recurring friction between the two agencies over mission overlap, budgets, and access to intelligence.	verified source-guide; annotation metadata, not claim verification
[ageint040]	BASIC CRYPTOGRAPHY	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 13; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

13.3.4 SIGINT Fundamentals governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 13.

13.3.5 SIGINT Fundamentals analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 7's governance-boundary section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Collection Management and Multi-INT Requirements Discipline** for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint258].

Curriculum topic spine: SIGINT metadata minimization and authority, **SIGINT legal-authority and communications-security governance exercise**, **Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [National Archives and Records Administration, 1981]; [National Security Agency, 2026d]; [Office of the Director of National Intelligence, 2026d].

Conceptual depth: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit.

Method stack: priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop.

Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable.

Known failure modes: opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority.

Defensive boundary: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures. Applied to **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Joint Chiefs of Staff, 2026]	Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[National Security Agency, 2026d]	Official NSA public explanation of FISA oversight for signals intelligence collection governed by statutory and court-authorized controls. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.

13.3.5.1 SIGINT Fundamentals evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Collection Management and Multi-INT Requirements Discipline** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint255]; [ageint258].

13.3.6 SIGINT Fundamentals agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 13.

AGEINT translation is bounded by the **Collection Management and Multi-INT Requirements Discipline** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.6.1 SIGINT Fundamentals permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 13.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.6.2 SIGINT Fundamentals excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint255]; [ageint258] and **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

13.3.7 SIGINT Fundamentals governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 13.
Governance is practiced as a gate on the **Collection Management and Multi-INT Requirements Discipline** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.7.1 SIGINT Fundamentals governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint255]; [ageint258].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Collection Management and Multi-INT Requirements Discipline** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

13.3.7.2 SIGINT Fundamentals evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.7.3 SIGINT Fundamentals current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint258].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_204` for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_joint_pub_2_0` for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**?	JP 2-0: Joint Intelligence; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments.
What does the module inherit from `official_ic_osint_strategy` for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 13; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

13.3.8 SIGINT Fundamentals assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 13.

13.3.9 SIGINT Fundamentals assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 13.

13.3.9.1 SIGINT Fundamentals capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint258].

13.3.9.2 SIGINT Fundamentals instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint258].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

13.3.9.3 SIGINT Fundamentals assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
SIGINT metadata minimization and authority; **SIGINT legal-authority and communications-security governance exercise**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
Spartans in Darkness: SIGINT legal-authority and communications-security governance exercise; **CIA NSA Historical Roles: SIGINT legal-authority and communications-security governance exercise**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Friedman Cryptography Records: SIGINT legal-authority and communications-security governance exercise	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

13.3.10 SIGINT Fundamentals refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint255]; [ageint258] and **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**.

13.3.10.1 SIGINT Fundamentals refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. The local signals begin with [ageint255]; [ageint258].

13.3.10.2 SIGINT Fundamentals claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**, and the source spine for these checks begins with [ageint255]; [ageint258].

13.3.11 SIGINT Fundamentals reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint255]; [ageint258].

Contextual source routes. For module 7's review-checklist section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint258].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.

- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

13.3.12 SIGINT Fundamentals learning-path links: module map, overview, and curriculum atlas

Read this module in sequence with the curriculum orientation, its parent unit, and the adjacent modules so the evidence behind **SIGINT metadata minimization and authority; SIGINT legal-authority and communications-security governance exercise** carries forward intact. Source anchors for this module begin at [ageint255]; [ageint258].
Section 2, Section 12, Section 14

14 Modern SIGINT and Cryptography

14.0.1 Modern SIGINT and Cryptography figures and course links: visual evidence, source flow, and navigation

The module uses Figure 44 and Figure 41 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 12, Section 13, Section 15.
This module teaches the **Collection Management and Multi-INT Requirements Discipline** lane through a bounded, source-backed coursebook chapter. [ageint258]; [ageint260].

14.1 Collection Management and Multi-INT Requirements Discipline frame for Modern SIGINT and Cryptography: source context, topic focus, and reader task

Navigation. Parent section: Section 14.

14.1.1 Modern SIGINT and Cryptography orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 14.

14.1.2 Modern SIGINT and Cryptography conceptual primer: source context, core model, and reader task

This chapter teaches collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.
The central distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Core topics include **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold; Encryption, Integrity, Authentication, and Lawful-Access Claims**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint258]; [ageint260].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

14.1.3 Modern SIGINT and Cryptography learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 14.

- Connect **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope and Metadata and Minimization: Unknown Authority Requires a Hold** to **Collection Management and Multi-INT Requirements Discipline** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures.

14.1.4 Modern SIGINT and Cryptography core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 14.

Term	Working definition
Priority	the relative importance of an intelligence question
Source discipline	a broad evidence channel such as HUMINT, SIGINT, GEOINT, OSINT, or FININT
Minimization	the rule that limits acquisition, retention, or use of unnecessary information
Source protection	the duty to reduce risk to people, methods, and sensitive relationships
Evaluation	the feedback step that tests whether the evidence satisfied the requirement
Gray-zone indicator	an observed feature potentially relevant to ambiguous coercion; neither coercive intent nor an armed-conflict threshold follows from the label
Proxy pattern	a relationship pattern that may motivate a sponsorship hypothesis but does not establish sponsorship, direction, or operational control

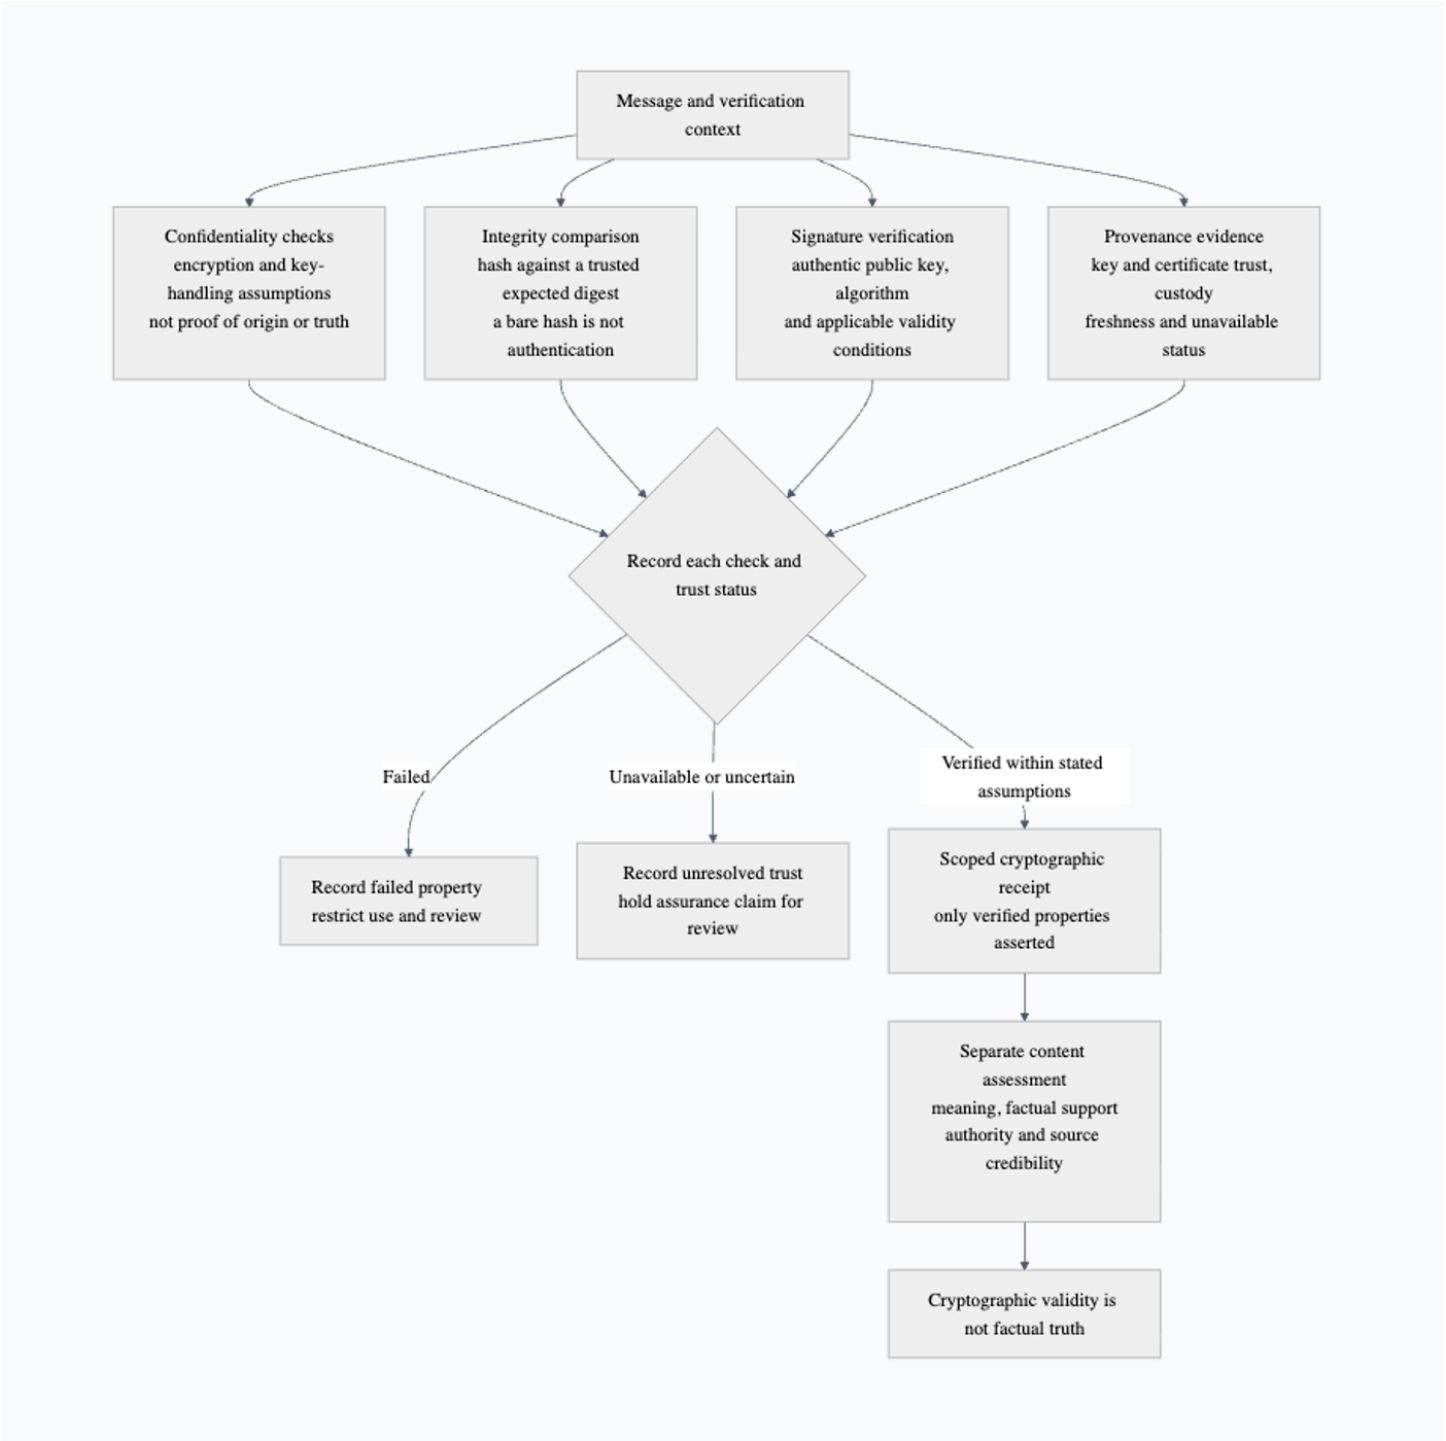

Figure 44: Cryptographic checks establish only their stated properties under declared trust assumptions. A matching hash needs a trusted comparison digest; signatures depend on authentic keys and valid verification conditions; provenance may remain incomplete. Failed or unavailable trust checks are recorded separately. Even successful verification does not establish semantic truth, lawful authority, or source credibility, so content assessment remains a distinct task.

14.2 Requirements-to-Evidence Lens path for Modern SIGINT and Cryptography: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 14.

14.2.1 Modern SIGINT and Cryptography practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 14.

14.2.2 Modern SIGINT and Cryptography topic lessons: source-backed concepts and transfer tasks

Modern SIGINT and Cryptography builds collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The sequence opens with **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope**, **Metadata and Minimization: Unknown Authority Requires a Hold**, **Encryption, Integrity, Authentication, and Lawful-Access Claims** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 41; module overview Section 14; curriculum atlas Section 2.

Contextual source routes. For module 8's topic-lessons section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

14.2.2.1 Lesson 1: UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope Concept. UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope

UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope uses the sharing arrangement to distinguish alliance governance, handling rules, legal authority, and source caveats.

Worked reasoning and limits. The inherited collection and briefing assemble released agreements and related documents; their selected historical coverage does not certify every current sharing practice or partner's legal powers. Separate originator, original date, release date, permitted audience, and any withheld annexes; a partner label cannot fill a missing permission field. For a supplied fictional extract marked 'classroom only,' sharing the extract with a wider audience remains blocked even when a related public agreement exists. Alliance membership, archival availability, and authority for a particular reuse are different propositions.

Why it matters. Without explicit treatment of **UKUSA and Five Eyes Records**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope**: [ageint041] and [ageint042]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **UKUSA and Five Eyes Records**, inspect the original passages. Curriculum annotation for [ageint041]: A collection page from Unredacted, a UK-based organization focused on declassified government records. It assembles over 70 documents obtained through a 2017 Freedom of Information Act legal challenge led by Privacy International, drawn from US agencies including the NSA, State Department, and Department of Defense. Curriculum annotation for [ageint042]: A briefing from Unredacted examining previously classified Five Eyes documents released to Privacy International following a 2017 US freedom of information request. The materials, spanning 1945 to 2016, trace the development and functioning of the UKUSA Agreement underpinning intelligence cooperation among the US, UK, Canada, Australia, and New Zealand. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **UKUSA and Five Eyes Records**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **UKUSA and Five Eyes Records**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **UKUSA and Five Eyes Records** work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope replaces human review whenever evidence looks plausible.

Transfer task. Transfer **UKUSA and Five Eyes Records** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.2 Lesson 2: Metadata and Minimization: Unknown Authority Requires a Hold Concept. Metadata and Minimization: Unknown Authority Requires a Hold

Metadata and Minimization: Unknown Authority Requires a Hold is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Metadata describes attributes such as timing or endpoints, but 'not content' does not mean non-sensitive, anonymous, or unrestricted; patterns can expose relationships even without message text. **Completed synthetic disposition:** instructor policy P1, a fictional classroom rule dated 1 October 2026 rather than real law, permits processing invented minute-level timestamps for a timing exercise and prohibits sharing endpoint identifiers. The provided packet contains a timestamp, endpoint field, and unrelated message text: the reviewer retains the permitted timestamp in the exercise copy, redacts the endpoint from dissemination, and withholds the unnecessary text from analysis. On challenge, the packet lacks its acquisition-authority entry: the reviewer holds the entire packet against further use or distribution and asks the authorized instructor to resolve it, preserving or disposing of originals only under the approved rule. ICD standards do not supply collection authority or a universal retention/deletion rule; actual jurisdiction, instrument version, stage, purpose, and reviewer must be established separately.

Why it matters. Metadata and Minimization matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **Metadata and Minimization: Unknown Authority Requires a Hold**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Metadata and Minimization**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Metadata and Minimization**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Metadata and Minimization**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Metadata and Minimization** work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Metadata and Minimization: Unknown Authority Requires a Hold can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **Metadata and Minimization** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.3 Lesson 3: Encryption, Integrity, Authentication, and Lawful-Access Claims

Concept. Encryption, Integrity, Authentication, and Lawful-Access Claims frames encryption as a policy and assurance trade-off among confidentiality, lawful process, communications security, and trust.

Worked reasoning and limits. Confidentiality limits who can read content; integrity concerns modification; authentication binds an asserted origin to a credential/key under stated trust assumptions; provenance records the content's lineage; none proves factual truth. End-to-end encryption describes where content is protected and decrypted, not a blanket guarantee about compromised endpoints, metadata, integrity in every construction, or legal immunity. A bare hash only supports a comparison when the reference and comparison process are trustworthy; a signature requires a trusted key/signatory relationship and does not certify the statement's accuracy [National Institute of Standards and Technology (NIST), 2023]. 'Lawful access' describes a legal/policy question, not proof that a technically secure access mechanism exists or that any named actor has authority. Inherited ICD citations support reasoning duties, not cryptographic security or the legality of a particular access demand.

Why it matters. Without explicit treatment of **Encryption, Integrity, Authentication, and Lawful-Access Claims**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **Encryption, Integrity, Authentication, and Lawful-Access Claims**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Encryption, Integrity, Authentication, and Lawful-Access Claims**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Encryption, Integrity, Authentication, and Lawful-Access Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Encryption Integrity Authentication and Lawful-Access**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Encryption, Integrity, Authentication, and Lawful-Access Claims is optional whenever separate collection discipline concepts from operational recruitment, interception, or tasking procedures feels inconvenient.

Transfer task. Transfer **Encryption, Integrity, Authentication, and Lawful-Access Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.4 Lesson 4: Historical Communications Concepts: Distinct Properties, No Construction Instructions

Concept. Historical Communications Concepts: Distinct Properties, No Construction Instructions is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The inherited list combines an encryption concept (one-time pad), a transmission-duration concept (burst transmission), and an indirect-transfer arrangement (digital dead drop); they answer different questions and do not imply the same security property. The theoretical secrecy associated with a one-time pad depends on stringent assumptions about key randomness, secrecy, length, and non-reuse, and does not by itself authenticate content or solve distribution. A short transmission or indirect delivery likewise does not establish confidentiality, anonymity, or truth. These are conceptual contrasts only; the narrow inherited sources do not validate a general secure-communications recipe, and no encoding, deployment, concealment, or evasion procedure is taught.

Why it matters. Analysts use **Historical Communications Concepts** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Historical Communications Concepts: Distinct Properties, No Construction Instructions**: [ageint027] and [ageint028]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Historical Communications Concepts**, inspect the original passages. No displayable curriculum annotation is available for [ageint027] and [ageint028]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical Communications Concepts**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Historical Communications Concepts**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical Communications Concepts** work as a **signal-evidence minimization card** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Historical Communications Concepts: Distinct Properties, No Construction Instructions establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Historical Communications Concepts** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.5 Lesson 5: RF Evidence and Technical-Surveillance Claims: Observations versus Attribution

Concept. RF Evidence and Technical-Surveillance Claims: Observations versus Attribution uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. RF describes a portion of the electromagnetic spectrum; the inherited RFINT label and vendor material should not be treated as a universally standardized intelligence discipline or a finding about a real emitter. An RF observation is not automatically communications content, a device identity, hostile intent, or evidence of surveillance. The Granite Island Group ten-level taxonomy and claimed roughly tenfold growth in detection difficulty are attributed vendor characterizations, not an independently measured universal scale; the supplied material defines no validated common difficulty metric. Keep vendor claims distinct from independently established performance and do not select frequencies, monitor transmissions, or inspect real facilities.

Why it matters. Without explicit treatment of **RF Evidence and Technical-Surveillance Claims**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **RF Evidence and Technical-Surveillance Claims: Observations versus Attribution**: [ageint043] and [ageint044]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **RF Evidence and Technical-Surveillance Claims**, inspect the original passages. Curriculum annotation for [ageint043]: An informational guide from Bastille Networks explaining Technical Surveillance Countermeasures (TSCM), defined as security measures aimed at detecting and neutralizing surveillance devices to protect sensitive communications. It traces TSCM origins to World War II and Cold War intelligence work and catalogues threat types such as radio-frequency transmitters, hidden cameras, and acoustic eavesdropping. Curriculum annotation for [ageint044]: A reference page from the Granite Island Group describing a ten-level taxonomy of technical surveillance threats and the corresponding technical surveillance countermeasures (TSCM) inspections used to detect them. It explains that detection difficulty increases by roughly an order of magnitude at each level, grouping threats into clusters and beginning with low-power consumer-grade devices. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **RF Evidence and Technical-Surveillance Claims**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **RF Evidence and Technical-Surveillance Claims**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **RF Evidence and Technical-Surveillance Claims** work as a **signal-evidence minimization card** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that RF Evidence and Technical-Surveillance Claims: Observations versus Attribution replaces human review whenever evidence looks plausible.

Transfer task. Transfer **RF Evidence and Technical-Surveillance Claims** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.6 Lesson 6: TSCM: Defensive Inspection Literacy and Detection Limits

Concept. **TSCM: Defensive Inspection Literacy and Detection Limits** is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. TSCM concerns defensive assessment of technical-surveillance risk; it is not synonymous with SIGINT collection or a particular detector. The cited service pages describe their vendors' inspection offerings, not independent estimates of sensitivity, coverage, or the probability that a space is free of devices. A supplied inspection summary saying 'no anomaly observed' supports only that stated result under its documented scope, not 'no surveillance exists'; an anomaly can also have ordinary equipment or environmental explanations. Classroom review evaluates report scope, provenance, limitations, and unresolved questions without performing sweeps, instrument deployment, interception, or live-facility assessment.

Why it matters. **TSCM: Defensive Inspection Literacy and Detection Limits** matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **TSCM: Defensive Inspection Literacy and Detection Limits**: [ageint045] and [ageint046]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **TSCM: Defensive Inspection Literacy and Detection Limits**, inspect the original passages. Curriculum annotation for [ageint045]: A service page from Pinkerton describing technical surveillance countermeasures used to detect and prevent corporate eavesdropping and protect intellectual property. It outlines examination methods including infrared spectrum analysis to find heat signatures of hidden devices, radio frequency analysis to identify wireless audio bugs, and physical inspection for tampered equipment or poor security practices. Curriculum annotation for [ageint046]: A web page from Murray Associates, a counterespionage consulting firm, explaining the technical surveillance countermeasures (TSCM) inspection process used to detect eavesdropping and surveillance devices in buildings. It outlines a three-phase methodology: a pre-inspection planning discussion, an on-site evaluation combining visual examination, technical instrumentation, and information-security review, and a post-inspection written report with findings and recommendations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **TSCM**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **TSCM**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **TSCM: Defensive Inspection Literacy and Detection Limits** work as a **signal-evidence minimization card** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that TSCM: Defensive Inspection Literacy and Detection Limits can be used while ignoring the rule to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Transfer task. Transfer **TSCM: Defensive Inspection Literacy and Detection Limits** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.2.7 Lesson 7: RF-spectrum governance and communications-security

Concept. **RF-spectrum governance and communications-security** connects the technical term to authority, minimization, communications-security risk, and public doctrine rather than interception mechanics.

Worked reasoning and limits. Preserve the technical modifier **non-linear**: a non-linear junction detector concerns non-linear electronic junction responses, RF spectrum analysis concerns radio-frequency energy characteristics, and infrared imaging concerns emitted/received thermal radiation patterns. These are different observation modalities, not interchangeable proof of a hidden hostile device. In wholly invented report cards, a junction response could come from ordinary electronics, an RF peak from permitted equipment, and a warm patch from a benign heat source; none alone proves surveillance or its absence. The inherited STIX/TAXII/ATLAS sources do not establish instrumentation definitions or performance, so no sensitivity, range, completeness, or deployment claim is supported here. This is device-class literacy only, with no instrument settings, search sequence, sweeps,

or real-facility use.

Why it matters. RF-spectrum governance matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **RF-spectrum governance and communications-security**: [ageint309], [ageint310], and [ageint300]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **RF-spectrum governance**, inspect the original passages. Curriculum annotation for [ageint309]: An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection. Curriculum annotation for [ageint310]: The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **RF-spectrum governance**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape the same topic work as a **signal-evidence minimization card** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **RF-spectrum governance**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Apply this module's safe boundary for **RF-spectrum governance** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

14.2.2.8 Lesson 8: Steganography detection-literacy and communications-security

Concept. Steganography detection-literacy and communications-security connects the technical term to authority, minimization, communications-security risk, and public doctrine rather than interception mechanics.

Worked reasoning and limits. Steganography aims to conceal the existence of a message within another carrier, whereas encryption principally protects intelligibility; neither property establishes the message's truth. LSB means least-significant bit, a low-order part of a numerical image representation; DCT means discrete cosine transform, a frequency-coefficient representation used in image processing, while network-layer approaches concern communication structures. These terms distinguish carrier representations only: the narrow cited network paper does not validate the entire taxonomy or any detector's efficacy. **Synthetic claim audit:** a fictional detector flags a recompressed image, but its card supplies no ground truth, false-positive rate, or matched benign controls; recompression is a plausible ordinary explanation, so the completed result is 'hidden content undetermined,' not proof of a payload. A later unflagged copy cannot prove absence, so hold attribution or adverse inference; no payload hiding, encoding, extraction, evasion, or real-network exercise is included.

Why it matters. Without explicit treatment of **Steganography detection-literacy**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **Steganography detection-literacy and communications-security**: [ageint028]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Steganography detection-literacy**, inspect the original passages. No displayable curriculum annotation is available for [ageint028]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **Steganography detection-literacy**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape the same topic work as a **signal-evidence minimization card** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Steganography detection-literacy**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **Steganography detection-literacy** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

14.2.2.9 Lesson 9: Deepfake-Era Authentication: Valid Credentials Can Carry False Content

Concept. Deepfake-Era Authentication: Valid Credentials Can Carry False Content is taught in the **Collection Management and Multi-INT Requirements Discipline** lane. The analytic distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Completed synthetic assurance case: supplied verification card V1 says document D1's signature is valid under a stipulated trusted course key, while D1 says a fictional exhibition opens Friday; independent supplied timetable T1 says Saturday. The signature supports the key/signature and modification check, not Friday's truth, so the analyst marks the opening date disputed and holds a definitive announcement rather than overriding T1. Clip C1 looks authentic but has no origin record or verification result, so appearance and a hypothetical detector score cannot establish speaker identity, provenance, or content accuracy; if key trust is later withdrawn, downgrade D1's authentication status too. Preserve the original, supplied checks, assumptions, conflict, and correction separately, and refer consequential reuse to the authorized instructor without contacting real people. The inherited AI/HUMINT commentary does not validate authentication capability; the signature standard supports only its bounded cryptographic properties [National Institute of Standards and Technology (NIST), 2023].

Why it matters. Analysts use **Deepfake-Era Authentication** to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. A defensible treatment names the judgment it enables for requirements decomposition and source-discipline fit review, the proof limit that opportunistic collection would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Deepfake-Era Authentication: Valid Credentials Can Carry False Content**: [ageint018]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Deepfake-Era Authentication**, inspect the original passages. Curriculum annotation for [ageint018]: A Nextgov article reporting on an essay in the CIA's Studies in Intelligence journal by RAND researcher Thomas Mulligan. It argues that as AI makes deepfakes and synthetic communications easier, trust in digital channels erodes, paradoxically increasing the value of traditional human intelligence methods.

These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Deepfake-Era Authentication**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must name the source descriptor, the bounded claim about **Deepfake-Era Authentication**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Deepfake-Era Authentication** work as a **signal-evidence minimization card** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Deepfake-Era Authentication: Valid Credentials Can Carry False Content replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Deepfake-Era Authentication** to a second module by preserving requirements decomposition and source-discipline fit, changing the source evidence, and naming a new reviewer.

14.2.3 Modern SIGINT and Cryptography worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic policy cell compares public indicators of hybrid pressure against an approved collection plan for a benign border-disruption exercise. [ageint258]; [ageint260].

Contextual source routes. For module 8's worked-example section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **signals-intelligence governance**. Learners use a **signal-evidence minimization card** and keep this boundary visible: No interception, decryption, surveillance target selection, or collection-expansion guidance.

Frame. The classroom question centers on **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** scenario, use a fictional freight-delay notice, a weather bulletin, interview H1 reporting the delay and H2 repeating H1, two toy signals absent during receiver downtime, and a scope card permitting only these supplied records. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope**, students first rank the question about disruption above the unsupported sponsorship allegation; then match each gap to a source discipline without tasking it, distinguish interview access and motivation from accuracy, and separate signal absence from collection authority; remove H2 and compare a second toy signal lost during downtime as controls. Stop any proposed contact or interception and send missing authority or evidence questions to the instructor. Pause whenever an inference about UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a requirements matrix recording disruption reports but unresolved cause and sponsorship, one underlying interview account rather than two independent sources, and an uninterpretable transmitter state during receiver downtime; no human contact, expanded collection, or signal observation confers authority Retain it as the **signal-evidence minimization card** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to requirements decomposition and source-discipline fit, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

14.2.4 Modern SIGINT and Cryptography practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

Contextual source routes. For module 8's practice-sequence section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope, Metadata and Minimization: Unknown Authority Requires a Hold, Encryption, Integrity, Authentication, and Lawful-Access Claims; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Collection Management and Multi-INT Requirements Discipline** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the signal-evidence minimization card fields for UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope.	Unit profile note.	Evidence artifacts include authority boundary note, minimization field.

Move	Learner action	Output	Check
4. Challenge	Test the misconception that UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope replaces human review whenever evidence looks plausible.	Failure-mode note.	The artifact applies the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

14.2.4.1 Modern SIGINT and Cryptography instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. [ageint258]; [ageint260].

14.2.4.2 Modern SIGINT and Cryptography extension exercise: peer validation and refresh trigger review Navigation. Parent section: Section 14.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.2.5 Modern SIGINT and Cryptography knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 14.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** to the final topic, **Deepfake-Era Authentication: Valid Credentials Can Carry False Content**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Collection Management and Multi-INT Requirements Discipline** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which gray-zone indicator changes the least-intrusive source choice without crossing into operational tasking?
5. Correct this misconception: that UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope replaces human review whenever evidence looks plausible.

14.2.5.1 Modern SIGINT and Cryptography answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope** without source evidence, uncertainty, or a safe transfer task.

14.3 Modern SIGINT and Cryptography assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 14.

14.3.1 Modern SIGINT and Cryptography evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 14.

14.3.2 Modern SIGINT and Cryptography transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 14.

14.3.2.1 Modern SIGINT and Cryptography lineage and source tradition: profile, concepts, and first anchors This sits in the **Collection Management and Multi-INT Requirements Discipline** lineage: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. [ageint258]; [ageint260].

14.3.2.2 Modern SIGINT and Cryptography working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 14.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**, with provenance and reviewability throughout.

14.3.2.3 Modern SIGINT and Cryptography knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** accountable requirements, source-discipline choices, minimization rules, source-risk notes, and evaluation criteria. [ageint258]; [ageint260].
- **Transforms:** priority mapping, source-discipline fit, least-intrusive evidence selection, and feedback review.
- **Outputs:** requirements matrix, collection-limit note, source-quality card, and gap list.
- **Failure modes:** recruitment or interception drift, over-collection, weak minimization, and source exposure.

14.3.2.4 Modern SIGINT and Cryptography transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 14.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.
- **Evidence contract:** keep the **Collection Management and Multi-INT Requirements Discipline** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as requirements matrix, collection-limit note, source-quality card, and gap list that another reviewer can audit.

14.3.2.5 Modern SIGINT and Cryptography profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 14.

The matched profile emphasizes requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. The method stack is priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop; the local topic cluster is **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.3 Modern SIGINT and Cryptography evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 14.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Collection Management and Multi-INT Requirements Discipline** profile tells reviewers what evidence is strong enough for the module artifact built around **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.3.1 Modern SIGINT and Cryptography guide source spine: inherited keys and local citation roles Primary guide citations: [ageint258]; [ageint260]; [ageint261]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint041]; [ageint042]; [ageint027]; [ageint028]; [ageint043]; [ageint044]; [ageint045]; [ageint046]; [ageint018]; [ageint298]; [ageint297]; [ageint309]; [ageint310]; [ageint300].

14.3.3.2 Modern SIGINT and Cryptography verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint258]; [ageint260].

Tier	What counts	How it is used
Source guide	[ageint258]; [ageint260]; [ageint261]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint041]; [ageint042]; [ageint027]; [ageint028]; [ageint043]; [ageint044]; [ageint045]; [ageint046]; [ageint018]; [ageint298]; [ageint297]; [ageint309]; [ageint310]; [ageint300].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 8's source-canon section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold** and [ageint258]; [ageint260], but only directly verified source URLs are encoded as citations.

14.3.3.3 Modern SIGINT and Cryptography intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. [ageint258]; [ageint260].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

14.3.3.4 Modern SIGINT and Cryptography runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 14.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	8.99	8.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Modern SIGINT and Cryptography to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	8.101	8.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Modern SIGINT and Cryptography	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	8.102	8.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Modern SIGINT and Cryptography	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope	8.1	8.1 UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Metadata and Minimization: Unknown Authority Requires a Hold	8.2	8.2 Metadata and Minimization: Unknown Authority Requires a Hold	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Encryption, Integrity, Authentication, and Lawful-Access Claims	8.3	8.3 Encryption, Integrity, Authentication, and Lawful-Access Claims	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Historical Communications Concepts: Distinct Properties, No Construction Instructions	8.4	8.4 Historical Communications Concepts: Distinct Properties, No Construction Instructions	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF Evidence and Technical-Surveillance Claims: Observations versus Attribution	8.5	8.5 RF Evidence and Technical-Surveillance Claims: Observations versus Attribution	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
TSCM: Defensive Inspection Literacy and Detection Limits	8.6	8.6 TSCM: Defensive Inspection Literacy and Detection Limits	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF-spectrum governance and communications-security	8.7	8.7 source title transformed into safe curriculum treatment; original: Non-Linear Junction Detectors, RF Spectrum Analysis, and Infrared Imaging: Limits	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Steganography detection-literacy and communications-security	8.8	8.8 source title transformed into safe curriculum treatment; original: Steganography: Existence-Hiding Concepts and Detection Uncertainty	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Deepfake-Era Authentication: Valid Credentials Can Carry False Content	8.9	8.9 Deepfake-Era Authentication: Valid Credentials Can Carry False Content	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

14.3.3.5 Modern SIGINT and Cryptography reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 14.

Lesson topic	Practice lens	Evidence artifact	Safety check
UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Metadata and Minimization: Unknown Authority Requires a Hold	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Encryption, Integrity, Authentication, and Lawful-Access Claims	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Historical Communications Concepts: Distinct Properties, No Construction Instructions	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF Evidence and Technical-Surveillance Claims: Observations versus Attribution	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Lesson topic	Practice lens	Evidence artifact	Safety check
TSCM: Defensive Inspection Literacy and Detection Limits	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF-spectrum governance and communications-security	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Steganography detection-literacy and communications-security	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Deepfake-Era Authentication: Valid Credentials Can Carry False Content	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

14.3.3.6 Modern SIGINT and Cryptography annotated source ledger: real titles and local contribution Each source cited by this **Collection Management and Multi-INT Requirements Discipline** module is paired below with its real title and a one-line note on what it contributes to **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

Source	Cited work	Curriculum annotation	Status
[ageint258]	OpenAPI Specification	The official OpenAPI Initiative publications page, serving as a central index for the OpenAPI Specification and related standards including the Arazzo and Overlay specifications. It provides access to multiple specification versions (2.0, 3.0, 3.1, and 3.2) and their corresponding downloadable schemas identified by release date, along with a registry of extensions, formats, media types, and other resources.	verified source-guide; annotation metadata, not claim verification
[ageint260]	Decentralized Identifiers (DIDs) v1.0	The W3C Recommendation for Decentralized Identifiers (DIDs) v1.0, published July 2022, defining a type of identifier that enables verifiable digital identity without reliance on a centralized registration authority. It specifies DID syntax (a scheme, method name, and method-specific identifier) and the DID document data model, which expresses verification methods, services, controllers, and verification relationships for authentication and assertion.	verified source-guide; annotation metadata, not claim verification
[ageint261]	RFC 9110: HTTP Semantics	RFC 9110, the official IETF standards document defining the core semantics and architecture of HTTP, published in June 2022 and consolidating nine earlier RFCs. It establishes terminology and protocol aspects shared across HTTP versions, including methods, status codes, header fields, content negotiation, conditional and range requests, authentication, and the http and https URI schemes.	verified source-guide; annotation metadata, not claim verification
[ageint275]	Fact Sheet: New Rule on the Accessibility of Web Content and Mobile Apps Provided by State and Local Governments	A US Department of Justice fact sheet explaining the 2024 ADA Title II rule requiring state and local governments to make their web content and mobile apps accessible. It establishes WCAG 2.1 Level AA as the technical standard, applies to entities such as schools, courts, libraries, and transit agencies, and sets compliance deadlines of April 2027 for larger jurisdictions and April 2028 for smaller ones.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint276]	What is a Data Protection Impact Assessment and When Is This Mandatory?	A European Data Protection Board FAQ page, part of its data protection guide for small businesses, explaining Data Protection Impact Assessments (DPIAs) and when they are mandatory. It describes a DPIA as a written assessment of the impact of a planned processing operation, required when processing poses high risks to individuals' rights.	verified source-guide; annotation metadata, not claim verification
[ageint283]	Recommendation of the Council on Open Government	An OECD legal instrument document reproducing the Recommendation of the Council on Open Government (OECD/LEGAL/0438), adopted on 14 December 2017. It defines open government as a culture of governance promoting transparency, integrity, accountability, and stakeholder participation in support of democracy and inclusive growth.	verified source-guide; annotation metadata, not claim verification
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification
[ageint293]	Inventory of NARA Artificial Intelligence (AI) Use Cases	The National Archives and Records Administration (NARA) official inventory of its artificial intelligence use cases, documenting 14 projects across deployed, pilot, and planned stages. Deployed efforts include workplace productivity tools, automated tagging for museum experiences, and historical record retrieval, while pilots cover PII detection and redaction, semantic search, and metadata generation, and planned work targets FOIA processing and public search.	verified source-guide; annotation metadata, not claim verification
[ageint295]	M-25-22: Driving Efficient Acquisition of Artificial Intelligence in Government	OMB Memorandum M-25-22 (April 3, 2025), Driving Efficient Acquisition of Artificial Intelligence in Government, issued under Executive Order 13960 and related directives. It provides guidance to federal agencies for acquiring effective and trustworthy AI in a timely, cost-effective manner, and rescinds and replaces earlier memorandum M-24-18.	verified source-guide; annotation metadata, not claim verification
[ageint041]	Five Eyes FOIA disclosures	A collection page from Unredacted, a UK-based organization focused on declassified government records. It assembles over 70 documents obtained through a 2017 Freedom of Information Act legal challenge led by Privacy International, drawn from US agencies including the NSA, State Department, and Department of Defense.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint042]	Five Eyes FOIA disclosures: key documents	A briefing from Unredacted examining previously classified Five Eyes documents released to Privacy International following a 2017 US freedom of information request. The materials, spanning 1945 to 2016, trace the development and functioning of the UKUSA Agreement underpinning intelligence cooperation among the US, UK, Canada, Australia, and New Zealand.	verified source-guide; annotation metadata, not claim verification
[ageint027]	The Dead Drop: Design a Communications Method Like a Spy	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint028]	Cited source (see bibliography)	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint043]	Technical Surveillance Countermeasures (TSCM) - Bastille Networks	An informational guide from Bastille Networks explaining Technical Surveillance Countermeasures (TSCM), defined as security measures aimed at detecting and neutralizing surveillance devices to protect sensitive communications. It traces TSCM origins to World War II and Cold War intelligence work and catalogues threat types such as radio-frequency transmitters, hidden cameras, and acoustic eavesdropping.	verified source-guide; annotation metadata, not claim verification
[ageint044]	Technical Surveillance Threat Levels - Granite Island Group	A reference page from the Granite Island Group describing a ten-level taxonomy of technical surveillance threats and the corresponding technical surveillance countermeasures (TSCM) inspections used to detect them. It explains that detection difficulty increases by roughly an order of magnitude at each level, grouping threats into clusters and beginning with low-power consumer-grade devices.	verified source-guide; annotation metadata, not claim verification
[ageint045]	TSCM / Technical Surveillance Countermeasures - Pinkerton	A service page from Pinkerton describing technical surveillance countermeasures used to detect and prevent corporate eavesdropping and protect intellectual property. It outlines examination methods including infrared spectrum analysis to find heat signatures of hidden devices, radio frequency analysis to identify wireless audio bugs, and physical inspection for tampered equipment or poor security practices.	verified source-guide; annotation metadata, not claim verification
[ageint046]	The TSCM Inspection Process / by Murray Associates TSCM	A web page from Murray Associates, a counterespionage consulting firm, explaining the technical surveillance countermeasures (TSCM) inspection process used to detect eavesdropping and surveillance devices in buildings. It outlines a three-phase methodology: a pre-inspection planning discussion, an on-site evaluation combining visual examination, technical instrumentation, and information-security review, and a post-inspection written report with findings and recommendations.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint018]	Old-school spycraft could make a comeback as AI undermines trust	A Nextgov article reporting on an essay in the CIA's Studies in Intelligence journal by RAND researcher Thomas Mulligan. It argues that as AI makes deepfakes and synthetic communications easier, trust in digital channels erodes, paradoxically increasing the value of traditional human intelligence methods.	verified source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint309]	STIX Version 2.1	An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection.	verified source-guide; annotation metadata, not claim verification
[ageint310]	TAXII Version 2.1	The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring.	verified source-guide; annotation metadata, not claim verification
[ageint300]	MITRE ATLAS	MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 14; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

14.3.4 Modern SIGINT and Cryptography governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 14.

14.3.5 Modern SIGINT and Cryptography analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 8's governance-boundary section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Collection Management and Multi-INT Requirements Discipline** for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. [ageint258]; [ageint260].

Curriculum topic spine: UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope, **Metadata and Minimization: Unknown Authority Requires a Hold**, **Encryption, Integrity, Authentication, and Lawful-Access Claims**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [National Archives and Records Administration, 1981]; [National Security Agency, 2026d]; [Office of the Director of National Intelligence, 2026d].

Conceptual depth: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit.

Method stack: priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop.

Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable.

Known failure modes: opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority.

Defensive boundary: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures. Applied to **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Joint Chiefs of Staff, 2026]	Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[National Security Agency, 2026d]	Official NSA public explanation of FISA oversight for signals intelligence collection governed by statutory and court-authorized controls. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.

14.3.5.1 Modern SIGINT and Cryptography evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Collection Management and Multi-INT Requirements Discipline** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint258]; [ageint260].

14.3.6 Modern SIGINT and Cryptography agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 14.

AGEINT translation is bounded by the **Collection Management and Multi-INT Requirements Discipline** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.6.1 Modern SIGINT and Cryptography permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 14.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.6.2 Modern SIGINT and Cryptography excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint258]; [ageint260] and **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

14.3.7 Modern SIGINT and Cryptography governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 14.
Governance is practiced as a gate on the **Collection Management and Multi-INT Requirements Discipline** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.7.1 Modern SIGINT and Cryptography governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint258]; [ageint260].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Collection Management and Multi-INT Requirements Discipline** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

14.3.7.2 Modern SIGINT and Cryptography evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.7.3 Modern SIGINT and Cryptography current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. [ageint258]; [ageint260].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_204` for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_joint_pub_2_0` for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**?	JP 2-0: Joint Intelligence; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments.
What does the module inherit from `official_ic_osint_strategy` for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 14; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

14.3.8 Modern SIGINT and Cryptography assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 14.

14.3.9 Modern SIGINT and Cryptography assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 14.

14.3.9.1 Modern SIGINT and Cryptography capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold** and [ageint258]; [ageint260].

14.3.9.2 Modern SIGINT and Cryptography instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold** and [ageint258]; [ageint260].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

14.3.9.3 Modern SIGINT and Cryptography assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; **Metadata and Minimization: Unknown Authority Requires a Hold**; **Encryption, Integrity, Authentication, and Lawful-Access Claims** **Historical Communications Concepts: Distinct Properties, No Construction Instructions**; **RF Evidence and Technical-Surveillance Claims: Observations versus Attribution**; **TSCM: Defensive Inspection Literacy and Detection Limits** **RF-spectrum governance and communications-security**; **Steganography detection-literacy and communications-security**; **Deepfake-Era Authentication: Valid Credentials Can Carry False Content**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

14.3.10 Modern SIGINT and Cryptography refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint258]; [ageint260] and **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**.

14.3.10.1 Modern SIGINT and Cryptography refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. The local signals begin with [ageint258]; [ageint260].

14.3.10.2 Modern SIGINT and Cryptography claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**, and the source spine for these checks begins with [ageint258]; [ageint260].

14.3.11 Modern SIGINT and Cryptography reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint258]; [ageint260].

Contextual source routes. For module 8's review-checklist section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold**. [ageint258]; [ageint260].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

14.3.12 Modern SIGINT and Cryptography learning-path links: module map, overview, and curriculum atlas

Read this module in sequence with the curriculum orientation, its parent unit, and the adjacent modules so the evidence behind **UKUSA and Five Eyes Records: Sharing Caveats and Historical Scope; Metadata and Minimization: Unknown Authority Requires a Hold** carries forward intact. Source anchors for this module begin at [ageint258]; [ageint260].

Section 2, Section 12, Section 13, Section 15

15 OPEN SOURCE INTELLIGENCE (OSINT)

15.1 OPEN SOURCE INTELLIGENCE (OSINT) learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 15.

15.1.1 open-source intelligence governance discipline spine: domain question and learning focus

Navigation. Parent section: Section 15.
This unit teaches **open-source intelligence governance**. OSINT work turns public availability into evaluated intelligence only after provenance, terms, reliability, minimization, and reproducibility are reviewed.

15.1.2 open-source intelligence governance source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 15.
Use IC OSINT strategy and tool-governance anchors for public-source quality, transparency, and ethics claims.

15.1.3 open-source intelligence governance practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 15.
The recurring practice artifact is a **OSINT provenance and minimization matrix** that draws on provenance chain, terms-of-use note, corroboration matrix, and minimization decision. The unit keeps its learning spine explicit. Classroom packet: three saved fictional council notices include an original dated closure notice, a repost copying it, and a later correction limiting closure to one entrance. Each has a supplied capture date and reuse note.

1. Record publisher, publication and capture times, reuse terms, and transformations; redact an unnecessary contact name.
2. Trace the repost to the original so two URLs are not counted as independent corroboration.
3. Apply the correction to the precise entrance and date. Remove the repost as a control: the judgment should not change.
4. Deliver a provenance matrix concluding that one entrance, not the whole building, is listed as closed; actual on-site conditions remain unverified. A documented origin does not itself prove the notice true. If permission or date coverage is unclear, retain only the permitted citation and mark reuse pending. Hand the gap to the instructor; do not expand into live collection.

15.1.4 open-source intelligence governance safety boundary: accountable, synthetic, and evidence-bounded limits

No exposed-service lookup, credentialed access, identity exposure, doxxing, or live collection expansion.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint251]; [ageint253].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint251]; [ageint253].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint251]; [ageint253].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint251]; [ageint253].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Open-Source and Geospatial Intelligence Integrity. Core anchors: [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Conceptual focus: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable. **Practice lens:** Requirements-to-Evidence Lens; What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit? [ageint251]; [ageint253].

15.1.5 OPEN SOURCE INTELLIGENCE (OSINT) visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 45 and Figure 46 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 14, Section 16.

15.1.6 OPEN SOURCE INTELLIGENCE (OSINT) module roster and source-lane inventory: citations, lanes, and learner route

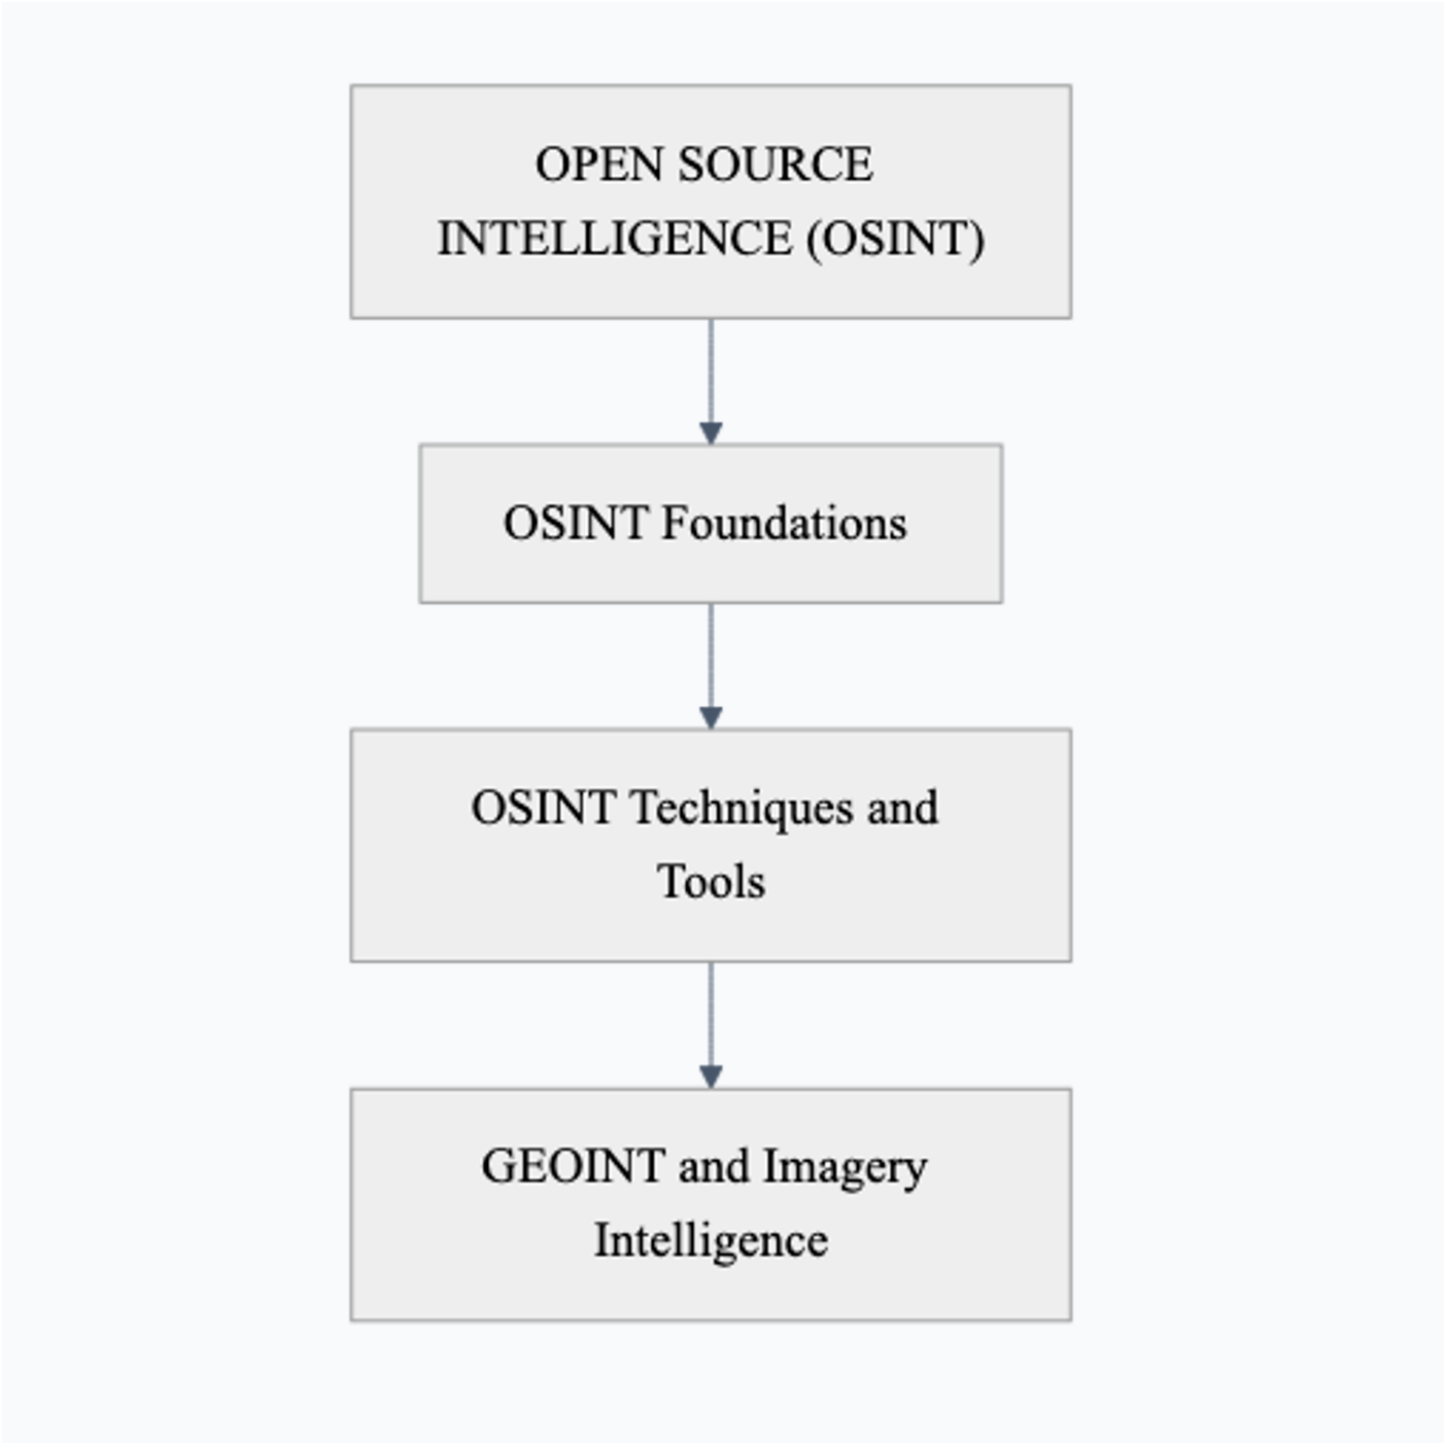

Figure 45: The OPEN SOURCE INTELLIGENCE (OSINT) module map traces the part's chapters as a linear reading sequence. It is anchored to the open source intelligence osint section; use it to inspect 3 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

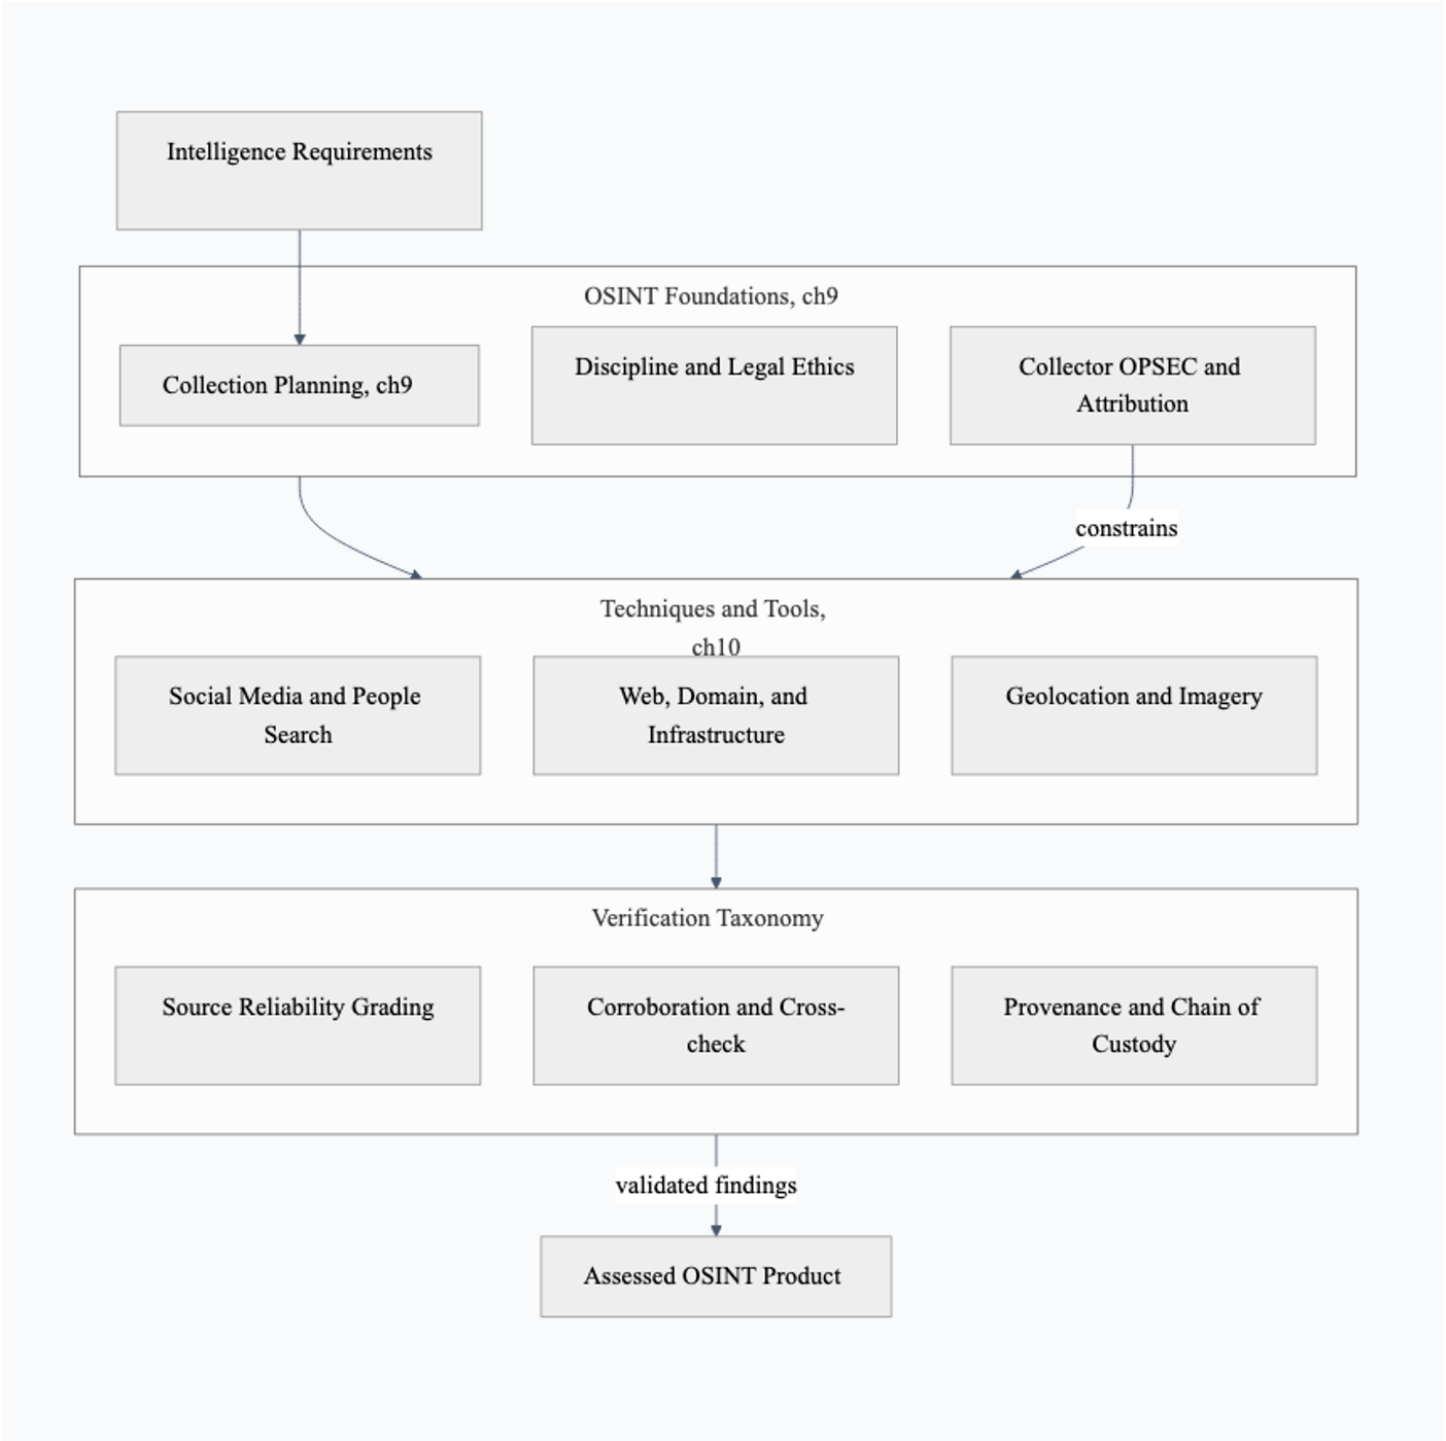

Figure 46: Part IV traces OSINT as a left-to-right pipeline from requirements through disciplined collection (ch9) and tooling (ch10) into a verification taxonomy that turns raw findings into an assessed product. Its reader value is to make Intelligence Requirements, Collection Planning, ch9, OSINT Foundations, ch9, and Discipline and Legal Ethics visible at a glance, with the open source intelligence osint section as the source section and defensive review as the boundary.

Module	Section reference	Source spine
OSINT Foundations	Section 16	[ageint251]; [ageint253]; [ageint269]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint047]; [ageint048]; [ageint049]; [ageint301]; [ageint298]; [ageint297].
OSINT Techniques and Tools	Section 17	[ageint251]; [ageint252]; [ageint269]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint050]; [ageint051]; [ageint052]; [ageint053]; [ageint054]; [ageint055]; [ageint056].
GEOINT and Imagery Intelligence	Section 18	[ageint253]; [ageint255]; [ageint270]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint057]; [ageint058]; [ageint059]; [ageint060]; [ageint301]; [ageint298]; [ageint302]; [ageint297].

16 OSINT Foundations

16.0.1 OSINT Foundations figures and course links: visual evidence, source flow, and navigation

The module uses Figure 47 and Figure 45 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 15, Section 17.
This module teaches the **Open-Source and Geospatial Intelligence Integrity** lane through a bounded, source-backed coursebook chapter. [ageint251]; [ageint253].

16.1 Open-Source and Geospatial Intelligence Integrity frame for OSINT Foundations: source context, topic focus, and reader task

Navigation. Parent section: Section 16.

16.1.1 OSINT Foundations orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 16.

16.1.2 OSINT Foundations conceptual primer: source context, core model, and reader task

This chapter teaches OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.
The central distinction is to separate discovery from collection expansion, and map or media interpretation from targeting. Core topics include **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026; OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint251]; [ageint253].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **History and Rise of OSINT in the Intelligence Community** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

16.1.3 OSINT Foundations learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 16.

- Connect **History and Rise of OSINT in the Intelligence Community and IC OSINT Strategy 2024–2026** to **Open-Source and Geospatial Intelligence Integrity** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting.

16.1.4 OSINT Foundations core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 16.

Term	Working definition
Provenance	the origin, custody, and transformation history of a source, which helps evaluate a claim but does not prove its truth or grant reuse permission
Corroboration	comparison of relevant, sufficiently independent evidence for a specific claim; copied sources do not become independent through repetition
Recency	the time relationship between source creation, discovery, and claim
Geospatial quality	accuracy, completeness, temporal fitness, and usability of location data
Minimization	limiting retained information to what the accountable question requires

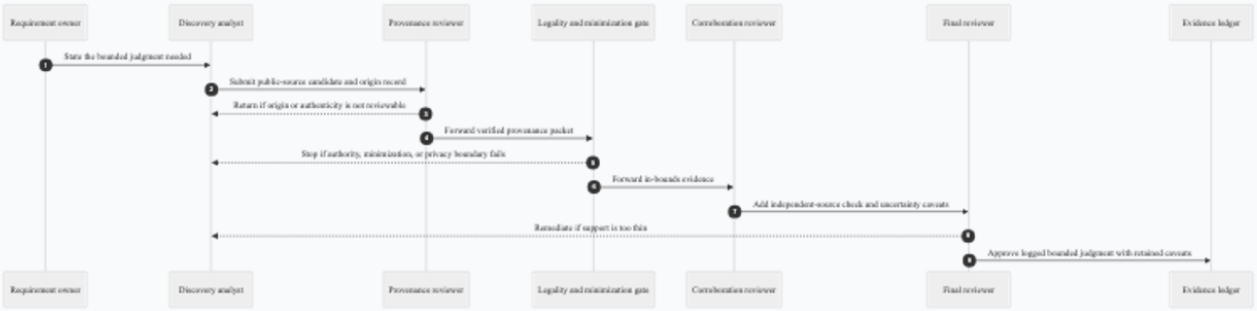

Figure 47: The OSINT sequence separates public-source discovery from claim reuse: each handoff records provenance, legality, minimization, corroboration, caveats, and reviewer disposition before a bounded judgment can be logged. In the open source intelligence osint / osint foundations section, it lets readers compare requirement owner, discovery analyst, provenance reviewer, legal and minimization gate, corroboration reviewer, final reviewer, logged bounded judgment, stop-and-retire path for unverifiable or out-of-bounds evidence so the visual functions as a traceable course aid rather than an unscoped assertion.

16.2 Requirements-to-Evidence Lens path for OSINT Foundations: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 16.

16.2.1 OSINT Foundations practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 16.

16.2.2 OSINT Foundations topic lessons: source-backed concepts and transfer tasks

OSINT Foundations builds OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The sequence opens with **History and Rise of OSINT in the Intelligence Community**, **IC OSINT Strategy 2024–2026**, **OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 45; module overview Section 16; curriculum atlas Section 2.

Contextual source routes. For module 9's topic-lessons section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

16.2.2.1 Lesson 1: History and Rise of OSINT in the Intelligence Community Concept. History and Rise of OSINT in the Intelligence Community

History and Rise of OSINT in the Intelligence Community compares civilian, military, and technical components by mission, oversight chain, and product type rather than by organizational chart alone.

Worked reasoning and limits. OSINT is an intelligence practice, not a synonym for everything visible online: a requirement, source evaluation and analysis turn accessible material into a bounded assessment. The CIA commentary is an institutional argument about OSINT's treatment, not a measured demonstration that open sources always outperform other disciplines [ageint047]. Ask what the document observed, what its author recommends, and what remains a historical interpretation.

Why it matters. Analysts use **History and Rise of OSINT in the Intelligence Community** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **History and Rise of OSINT in the Intelligence Community**: [ageint047]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **History and Rise of OSINT in the Intelligence Community**, inspect the original passages. No displayable curriculum annotation is available for [ageint047]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **History and Rise of OSINT in the Intelligence Community**, build an institutional feedback-loop map with incentives, review points, and oversight hooks. Shape the same topic work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that History and Rise of OSINT in the Intelligence Community can be used while ignoring the rule to separate discovery from collection expansion, and map or media interpretation from targeting.

Transfer task. Transfer **History and Rise of OSINT in the Intelligence Community** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

16.2.2.2 Lesson 2: IC OSINT Strategy 2024–2026 Concept. IC OSINT Strategy 2024–2026

IC OSINT Strategy 2024–2026 treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. Read the 2024–2026 strategy as a dated statement of priorities for integration, tradecraft, tools and workforce, not evidence that those ambitions were achieved [ageint048]. A strategy's desired capability, an implemented process and an evaluated outcome are three different claims. Its date range must travel with quotations; do not silently treat it as a current successor policy.

Why it matters. IC OSINT Strategy 2024–2026 connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **IC OSINT Strategy 2024–2026**: [ageint048]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **IC OSINT Strategy 2024–2026**, inspect the original passages. No displayable curriculum annotation is available for [ageint048]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **IC OSINT Strategy 2024–2026**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **IC OSINT Strategy**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that IC OSINT Strategy 2024–2026 is optional whenever separate discovery from collection expansion, and map or media interpretation from targeting feels inconvenient.

Transfer task. Transfer **IC OSINT Strategy 2024–2026** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

16.2.2.3 Lesson 3: OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion Concept. OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion

OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion treats human-source work as a governed relationship: validation, consent, reporting, source protection, and oversight—not contact activity.

Worked reasoning and limits. As evidence channels, OSINT uses openly available material, HUMINT draws on human reporting, and SIGINT concerns signal-derived information; compare access/selection bias, observation time and what each record actually measures, not a universal ranking. In a completed synthetic exercise, open notice N1 says a fictional museum is closed on 12 May, articles A1/A2 quote N1, interview abstract H1 explicitly repeats N1, and a supplied technical status summary G1 merely records its internal notice-display system as online; schedule S1 calls opening status unconfirmed. The origin graph yields one affirmative closure origin, three dependent repetitions, a different-property technical observation and one unresolved qualification, so fusion gives 'closure reported by N1; independently unestablished', not five confirmations. Removing N1 removes

affirmative support, and correcting it to 'east entrance closed' narrows the result rather than preserving whole-site closure; different channels and different citation keys do not guarantee independence, including the same-URL strategy keys ageint048/301. These are fictional supplied abstracts, not collection tasks; use the record procedure in Section 3.6.

Why it matters. Without explicit treatment of **OSINT vs. HUMINT vs. SIGINT**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion**: [ageint301] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **OSINT vs. HUMINT vs. SIGINT**, inspect the original passages. Curriculum annotation for [ageint301]: Official Intelligence Community strategy for open-source intelligence governance, integration, source discovery, data, tools, tradecraft, and workforce priorities. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **OSINT vs. HUMINT vs. SIGINT**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **OSINT vs HUMINT vs SIGINT**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **OSINT vs. HUMINT vs. SIGINT** work as an **OSINT provenance and minimization matrix** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion establishes intent without reviewing alternative explanations.

Transfer task. Transfer **OSINT vs. HUMINT vs. SIGINT** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

16.2.2.4 Lesson 4: Legal and Ethical Constraints in OSINT Collection

Concept. Legal and Ethical Constraints in OSINT Collection treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. Public availability is an access condition, not permission for acquisition, automated extraction, retention, combination or republication. Separate applicable jurisdiction and dated authority, contractual restrictions, privacy interests and permitted purpose; ICD 203 supplies analytic standards, not collection authority [ageint297]. For a supplied archive whose licence permits classroom reading but not redistribution, the bounded output is an internal record identifier and necessary quotation, not a republished dataset; if authority or rights cannot be established, stop that use rather than infer permission from visibility.

Why it matters. Without explicit treatment of **Legal and Ethical Constraints in OSINT Collection**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Legal and Ethical Constraints in OSINT Collection**: [ageint298] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Legal and Ethical Constraints in OSINT Collection**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Legal and Ethical Constraints in OSINT Collection**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **Legal and Ethical Constraints in**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Legal and Ethical Constraints in OSINT Collection replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Legal and Ethical Constraints in OSINT Collection** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

16.2.2.5 Lesson 5: Identity-and-provenance ethics audit with no impersonation

Concept. Identity-and-provenance ethics audit with no impersonation is taught in the **Open-Source and Geospatial Intelligence Integrity** lane. The analytic distinction is to separate discovery from collection expansion, and map or media interpretation from targeting. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The inherited heading names a risk to examine, not an instruction to build deceptive accounts. Distinguish legitimate separation of classroom data from personal accounts from impersonation, covert engagement and circumvention of access restrictions; this course authorizes none of the latter. Use supplied static records without contacting subjects or services, and stop if an exercise would require an account, live identity lookup or interaction.

Why it matters. Without explicit treatment of **Identity-and-provenance ethics audit**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Identity-and-provenance ethics audit with no impersonation**: [ageint301] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Identity-and-provenance ethics audit**, inspect the original passages. Curriculum annotation for [ageint301]: Official Intelligence Community strategy for open-source intelligence governance, integration, source discovery, data, tools, tradecraft, and workforce priorities. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Identity-and-provenance ethics audit**, build a **requirements matrix with source descriptors, caveats, and**

collection limits for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must state the identity descriptor, the bounded claim about **Identity-and-provenance ethics audit**, the linkage caveat, the uncertainty note, the no-deanonymization boundary, and the reviewer who clears the record. Shape **Identity-and-provenance ethics audit** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a presented identity is an established one, when provenance requires tracing how that identity was created, verified, and could be forged.

Transfer task. Reuse the **Identity-and-provenance ethics audit** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

16.2.2.6 Lesson 6: Open Source Intelligence: Trends and Issues

Concept. Open Source Intelligence: Trends and Issues treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. Scale, search ranking, deletion and synthetic content can change which records are visible without changing the underlying event. Distinguish the exact captured version, publication time, acquisition time and transformation from the factual claim extracted; an authentic capture records a particular captured version, but does not establish that its assertions are true or that the record is complete. The inherited Academia.edu discovery reference is provenance for this topic, not sufficient primary evidence for quantified trends or current legal rules; those remain unsupported without an adequate dated source.

Why it matters. Open Source Intelligence connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Open Source Intelligence: Trends and Issues**: [ageint049]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Open Source Intelligence**, inspect the original passages. Curriculum annotation for [ageint049]: The text explores OSINT's advantages and disadvantages in intelligence activities. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Open Source Intelligence**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **Open Source Intelligence**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Open Source Intelligence** work as an **OSINT provenance and minimization matrix** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Open Source Intelligence: Trends and Issues is optional whenever separate discovery from collection expansion, and map or media interpretation from targeting feels inconvenient.

Transfer task. Transfer **Open Source Intelligence** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

16.2.3 OSINT Foundations worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic public-resilience team checks whether open data supports a non-sensitive evacuation-route map. [ageint251]; [ageint253].

Contextual source routes. For module 9's worked-example section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **open-source intelligence governance**. Learners use a **OSINT provenance and minimization matrix** and keep this boundary visible: No exposed-service lookup, credentialed access, identity exposure, doxxing, or live collection expansion.

Frame. The classroom question centers on **History and Rise of OSINT in the Intelligence Community**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **History and Rise of OSINT in the Intelligence Community** scenario, use saved fictional road layer A with 100-metre uncertainty and a 2023 date, notice B closing one of two nearby bridges in 2026, repost C copying B, and supplied capture metadata and classroom reuse terms. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **History and Rise of OSINT in the Intelligence Community**, students first record origin, reuse terms, spatial reference, resolution, and relevant dates; then compare the notice with both bridge footprints and trace C to B; remove C as a control so corroboration does not increase through copying. Minimize personal fields and stop a route recommendation when the old layer cannot resolve bridge identity; hand the gap to the mapping instructor. Pause whenever an inference about History and Rise of OSINT in the Intelligence Community appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a source-quality matrix and map note recording one underlying closure notice, unresolved bridge identity and present conditions, and no safe-route judgment; the allowed classroom reuse is documented separately from source reliability, with no live tracking, collection expansion, or identity exposure Retain it as the **OSINT provenance and minimization matrix** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **History and Rise of OSINT in the Intelligence Community** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to source-quality review and non-sensitive geospatial interpretation, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **History and Rise of OSINT in the Intelligence Community** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

16.2.4 OSINT Foundations practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

Contextual source routes. For module 9's practice-sequence section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare History and Rise of OSINT in the Intelligence Community, IC OSINT Strategy 2024–2026, OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Open-Source and Geospatial Intelligence Integrity** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for History and Rise of OSINT in the Intelligence Community: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the OSINT provenance and minimization matrix fields for History and Rise of OSINT in the Intelligence Community.	Unit profile note.	Evidence artifacts include provenance chain, terms-of-use note.
4. Challenge	Test the misconception that History and Rise of OSINT in the Intelligence Community can be used while ignoring the rule to separate discovery from collection expansion, and map or media interpretation from targeting.	Failure-mode note.	The artifact applies the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

16.2.4.1 OSINT Foundations instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. [ageint251]; [ageint253].

16.2.4.2 OSINT Foundations extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 16. Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.2.5 OSINT Foundations knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 16.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **History and Rise of OSINT in the Intelligence Community**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **History and Rise of OSINT in the Intelligence Community** to the final topic, **Open Source Intelligence: Trends and Issues**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Open-Source and Geospatial Intelligence Integrity** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which source is available but not reliable enough for the claim?
5. Correct this misconception: that History and Rise of OSINT in the Intelligence Community can be used while ignoring the rule to separate discovery from collection expansion, and map or media interpretation from targeting.

16.2.5.1 OSINT Foundations answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **History and Rise of OSINT in the Intelligence Community** without source evidence, uncertainty, or a safe transfer task.

16.3 OSINT Foundations assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 16.

16.3.1 OSINT Foundations evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 16.

16.3.2 OSINT Foundations transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 16.

16.3.2.1 OSINT Foundations lineage and source tradition: profile, concepts, and first anchors This sits in the **Open-Source and Geospatial Intelligence Integrity** lineage: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. [ageint251]; [ageint253].

16.3.2.2 OSINT Foundations working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 16.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**, with provenance and reviewability throughout.

16.3.2.3 OSINT Foundations knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** supplied public-source records, acquisition and publication times, origin families, sensor metadata, and reuse permissions. [ageint251]; [ageint253].
- **Transforms:** trace originals, distinguish availability from permission, compare spatial and temporal fit, test registration, and challenge apparent corroboration.
- **Outputs:** provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff.
- **Failure modes:** map precision as certainty, old media as current observation, source-count confidence, or identity and location targeting.

16.3.2.4 OSINT Foundations transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 16.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.
- **Evidence contract:** keep the **Open-Source and Geospatial Intelligence Integrity** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff that another reviewer can audit.

16.3.2.5 OSINT Foundations profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 16.

The matched profile emphasizes public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. The method stack is source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration; the local topic cluster is **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.3 OSINT Foundations evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 16.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Open-Source and Geospatial Intelligence Integrity** profile tells reviewers what evidence is strong enough for the module artifact built around **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.3.1 OSINT Foundations guide source spine: inherited keys and local citation roles Primary guide citations: [ageint251]; [ageint253]; [ageint269]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint047]; [ageint048]; [ageint049]; [ageint301]; [ageint298]; [ageint297].

16.3.3.2 OSINT Foundations verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint251]; [ageint253].

Tier	What counts	How it is used
Source guide	[ageint251]; [ageint253]; [ageint269]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint047]; [ageint048]; [ageint049]; [ageint301]; [ageint298]; [ageint297].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 9's source-canon section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026** and [ageint251]; [ageint253], but only directly verified source URLs are encoded as citations.

16.3.3.3 OSINT Foundations intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. [ageint251]; [ageint253].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

16.3.3.4 OSINT Foundations runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 16.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	9.99	9.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind OSINT Foundations to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	9.101	9.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for OSINT Foundations	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	9.102	9.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for OSINT Foundations	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
History and Rise of OSINT in the Intelligence Community	9.1	9.1 History and Rise of OSINT in the Intelligence Community	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
IC OSINT Strategy 2024–2026	9.2	9.2 IC OSINT Strategy 2024–2026	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion	9.3	9.3 OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Legal and Ethical Constraints in OSINT Collection	9.4	9.4 Legal and Ethical Constraints in OSINT Collection	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Identity-and-provenance ethics audit with no impersonation	9.5	9.5 source title transformed into safe curriculum treatment; original: OPSEC for OSINT Operators: The Sock Puppet Problem	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Open Source Intelligence: Trends and Issues	9.6	9.6 Open Source Intelligence: Trends and Issues	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

16.3.3.5 OSINT Foundations reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 16.

Lesson topic	Practice lens	Evidence artifact	Safety check
History and Rise of OSINT in the Intelligence Community	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
IC OSINT Strategy 2024–2026	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Legal and Ethical Constraints in OSINT Collection	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Identity-and-provenance ethics audit with no impersonation	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Open Source Intelligence: Trends and Issues	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

16.3.3.6 OSINT Foundations annotated source ledger: real titles and local contribution Each source cited by this **Open-Source and Geospatial Intelligence Integrity** module is paired below with its real title and a one-line note on what it contributes to **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

Source	Cited work	Curriculum annotation	Status
[ageint251]	European Data Governance Act	The European Commission page explaining the Data Governance Act, an EU regulation that became applicable in September 2023 to build trust in data sharing and ease reuse of data. It outlines four mechanisms: facilitating reuse of protected public-sector data, establishing trusted data intermediaries, enabling voluntary data sharing by citizens and businesses, and removing barriers to cross-sector and cross-border data use.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint253]	Common European Data Spaces	This is an official European Commission webpage describing the Common European Data Spaces initiative, part of the EU strategy to create interconnected, trustworthy data-sharing environments across strategic sectors. It explains that data spaces let organizations and individuals share data while retaining control, guided by principles of open participation, privacy protection, and fair access rules.	verified source-guide; annotation metadata, not claim verification
[ageint269]	Data on the Web Best Practices	A W3C Recommendation, "Data on the Web Best Practices," published January 31, 2017 by the Data on the Web Best Practices Working Group. It offers 35 best practices for publishing and consuming data on the Web, covering metadata, licensing and provenance, data quality, dataset versioning, persistent URIs, machine-readable formats, vocabulary reuse, access methods, preservation, and feedback.	verified source-guide; annotation metadata, not claim verification
[ageint273]	WCAG 2 Overview	The W3C Web Accessibility Initiative overview of the Web Content Accessibility Guidelines (WCAG), an international standard for making web content accessible to people with disabilities. It explains that WCAG is organized around four principles (perceivable, operable, understandable, robust) with testable success criteria at three conformance levels (A, AA, AAA), and covers versions 2.0, 2.1, and 2.2.	verified source-guide; annotation metadata, not claim verification
[ageint274]	CAST Universal Design for Learning Guidelines version 3.0	The official CAST website for the Universal Design for Learning (UDL) Guidelines version 3.0, released in 2024. The framework offers research-based guidance for designing inclusive learning environments and is organized around three principles: Engagement (motivation and emotional support), Representation (accessible presentation of information), and Action and Expression (diverse means of participation and communication).	verified source-guide; annotation metadata, not claim verification
[ageint275]	Fact Sheet: New Rule on the Accessibility of Web Content and Mobile Apps Provided by State and Local Governments	A US Department of Justice fact sheet explaining the 2024 ADA Title II rule requiring state and local governments to make their web content and mobile apps accessible. It establishes WCAG 2.1 Level AA as the technical standard, applies to entities such as schools, courts, libraries, and transit agencies, and sets compliance deadlines of April 2027 for larger jurisdictions and April 2028 for smaller ones.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification
[ageint287]	Datasheets for Datasets	A 2018 arXiv paper proposing 'datasheets for datasets,' a standardized documentation framework for machine learning datasets modeled on electronic component datasheets. The authors argue the field lacks consistent dataset documentation, which creates risk in high-stakes applications, and propose that datasets be accompanied by documentation covering motivation, composition, collection process, recommended uses, and test results.	verified source-guide; annotation metadata, not claim verification
[ageint292]	Assessing Risks and Impacts of AI (ARIA): Pilot Evaluation Report	The ARIA 0.1 pilot evaluation report documents NIST's methodology for systematically assessing AI applications for risks and societal impacts, using a multi-layered evaluation approach across five participating organizations and seven submitted AI applications. The pilot employed three evaluation scenarios and three testing levels: model testing, red teaming, and field testing, supplemented by dialogue annotation, tester questionnaires, and structured measurement trees.	verified source-guide; annotation metadata, not claim verification
[ageint047]	How the Intelligence Community Has Held Back Open-Source	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint048]	The IC OSINT Strategy 2024-2026	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint049]	Open Source Intelligence (OSINT): issues and trends	The text explores OSINT's advantages and disadvantages in intelligence activities.	original source-guide; annotation metadata, not claim verification
[ageint301]	The IC OSINT Strategy 2024-2026	Official Intelligence Community strategy for open-source intelligence governance, integration, source discovery, data, tools, tradecraft, and workforce priorities.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 16; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

16.3.4 OSINT Foundations governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 16.

16.3.5 OSINT Foundations analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 9's governance-boundary section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Open-Source and Geospatial Intelligence Integrity** for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. [ageint251]; [ageint253].

Curriculum topic spine: History and Rise of OSINT in the Intelligence Community, **IC OSINT Strategy 2024–2026**, **OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion**. **Recorded source cluster; inspection and scope limits apply:** [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]; [National Geospatial-Intelligence Agency, 2026a]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015].

Conceptual depth: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests.

Method stack: source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration.

Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable.

Known failure modes: privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability.

Defensive boundary: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting. Applied to **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

Anchor	Why it matters here
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Department of State, 2024]	Official strategy source for lawful OSINT governance, discovery, validation, and dissemination. Checked as of 2026-05-21; role: curriculum_anchor.
[International Organization for Standardization, 2013]	International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026b]	Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026a]	Official NGA source on GEOINT AI, data quality, model performance, interoperability, analyst interaction, and standards leadership. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.

16.3.5.1 OSINT Foundations evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Open-Source and Geospatial Intelligence Integrity** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint251]; [ageint253].

16.3.6 OSINT Foundations agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 16.

AGEINT translation is bounded by the **Open-Source and Geospatial Intelligence Integrity** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.6.1 OSINT Foundations permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 16.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.6.2 OSINT Foundations excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint251]; [ageint253] and **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

16.3.7 OSINT Foundations governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 16.

Governance is practiced as a gate on the **Open-Source and Geospatial Intelligence Integrity** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.7.1 OSINT Foundations governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint251]; [ageint253].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Open-Source and Geospatial Intelligence Integrity** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

16.3.7.2 OSINT Foundations evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.7.3 OSINT Foundations current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. [ageint251]; [ageint253].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_ic_osint_strategy` for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
What does the module inherit from `official_state_osint_strategy` for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**?	Open Source Intelligence Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official strategy source for lawful OSINT governance, discovery, validation, and dissemination.
What does the module inherit from `official_iso_19157_data_quality` for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**?	ISO 19157:2013 Geographic Information - Data Quality; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing.
What does the module inherit from `official_nga_strategy` for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**?	NGA Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 16; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

16.3.8 OSINT Foundations assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 16.

16.3.9 OSINT Foundations assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 16.

16.3.9.1 OSINT Foundations capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026** and [ageint251]; [ageint253].

16.3.9.2 OSINT Foundations instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026** and [ageint251]; [ageint253].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

16.3.9.3 OSINT Foundations assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
History and Rise of OSINT in the Intelligence Community; **IC OSINT Strategy 2024–2026**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
OSINT vs. HUMINT vs. SIGINT: Comparative Value and Fusion; **Legal and Ethical Constraints in OSINT Collection**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Identity-and-provenance ethics audit with no impersonation; **Open Source Intelligence: Trends and Issues**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

16.3.10 OSINT Foundations refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint251]; [ageint253] and **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**.

16.3.10.1 OSINT Foundations refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. The local signals begin with [ageint251]; [ageint253].

16.3.10.2 OSINT Foundations claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**, and the source spine for these checks begins with [ageint251]; [ageint253].

16.3.11 OSINT Foundations reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint251]; [ageint253].
Contextual source routes. For module 9's review-checklist section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026**. [ageint251]; [ageint253].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

16.3.12 OSINT Foundations learning-path links: module map, overview, and curriculum atlas

Use the cross-links below to place **History and Rise of OSINT in the Intelligence Community; IC OSINT Strategy 2024–2026** in the wider unit: the orientation sets the frame, the parent unit supplies the shared safety posture, and the neighbouring modules show what evidence enters and leaves. Lead sources: [ageint251]; [ageint253].

Section 2, Section 15, Section 17

17 OSINT Techniques and Tools

17.0.1 OSINT Techniques and Tools figures and course links: visual evidence, source flow, and navigation

The module uses Figure 48 and Figure 45 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 15, Section 16, Section 18.
This module teaches the **Open-Source and Geospatial Intelligence Integrity** lane through a bounded, source-backed coursebook chapter. [ageint251]; [ageint252].

17.1 Open-Source and Geospatial Intelligence Integrity frame for OSINT Techniques and Tools: source context, topic focus, and reader task

Navigation. Parent section: Section 17.

17.1.1 OSINT Techniques and Tools orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 17.

17.1.2 OSINT Techniques and Tools conceptual primer: source context, core model, and reader task

This chapter teaches OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.
The central distinction is to separate discovery from collection expansion, and map or media interpretation from targeting. Core topics include **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records; Graph-analysis provenance review using instructor-provided records**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint251]; [ageint252].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **Search-exposure provenance review using instructor-provided records** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

17.1.3 OSINT Techniques and Tools learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 17.

- Connect **Search-exposure provenance review using instructor-provided records and Social-source provenance and minimization review using toy records** to **Open-Source and Geospatial Intelligence Integrity** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting.

17.1.4 OSINT Techniques and Tools core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 17.

Term	Working definition
Provenance	the origin, custody, and transformation history of a source, which helps evaluate a claim but does not prove its truth or grant reuse permission
Corroboration	comparison of relevant, sufficiently independent evidence for a specific claim; copied sources do not become independent through repetition
Recency	the time relationship between source creation, discovery, and claim
Geospatial quality	accuracy, completeness, temporal fitness, and usability of location data
Minimization	limiting retained information to what the accountable question requires

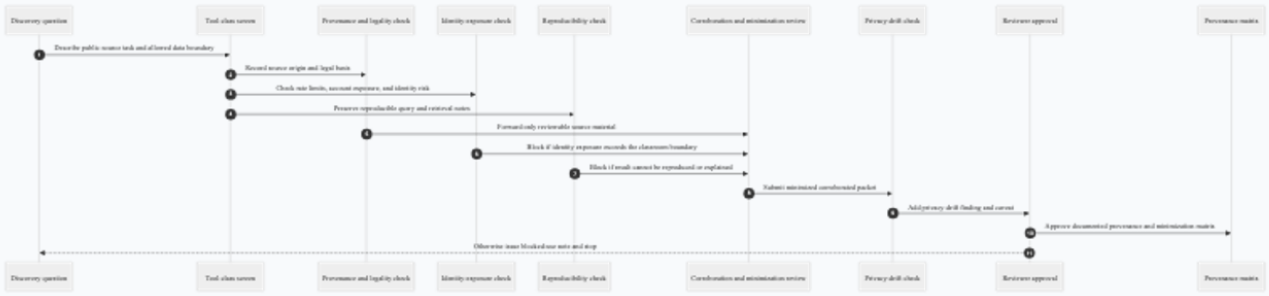

Figure 48: The OSINT provenance sequence makes the governance screen explicit: tool class, provenance, legality, identity exposure, reproducibility, minimization, privacy drift, and reviewer approval are checked before reuse. The captioned view belongs to the open source intelligence osint / osint techniques and tools section and should be read as a map of public-source question, tool-class governance screen, provenance and legality check, identity-exposure check, reproducibility check, corroboration and minimization review, privacy-drift check, reviewer approval, documented matrix or blocked-use note, not as a capability score or live-task instruction.

17.2 Requirements-to-Evidence Lens path for OSINT Techniques and Tools: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 17.

17.2.1 OSINT Techniques and Tools practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 17.

17.2.2 OSINT Techniques and Tools topic lessons: source-backed concepts and transfer tasks

OSINT Techniques and Tools builds OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The sequence opens with **Search-exposure provenance review using instructor-provided records**, **Social-source provenance and minimization review using toy records**, **Graph-analysis provenance review using instructor-provided records** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 45; module overview Section 17; curriculum atlas Section 2.

Contextual source routes. For module 10's topic-lessons section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

17.2.2.1 Lesson 1: Search-exposure provenance review using instructor-provided records Concept. Search-exposure provenance review using instructor-provided records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility before any public-source claim is reused.

Worked reasoning and limits. A search index is a selected, delayed representation of records, not the underlying service and not permission to inspect it. Compare only instructor-supplied result snapshots: absence can mean indexing, access or query differences rather than absence of the event. The inherited Reddit discussion and tool survey do not establish current engine syntax, provider behaviour or lawful collection authority; no live queries, device searches or scanning are part of this lesson.

Why it matters. Search-exposure provenance review matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Search-exposure provenance review using instructor-provided records**: [ageint050] and [ageint051]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Search-exposure provenance review**, inspect the original passages. No displayable curriculum annotation is available for [ageint050] and [ageint051]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Search-exposure provenance review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Search-exposure provenance review using instructor-provided**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Search-exposure provenance review** work as an **OSINT provenance and minimization matrix** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Search-exposure provenance review**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Apply this module's safe boundary for **Search-exposure provenance review** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

17.2.2.2 Lesson 2: Social-source provenance and minimization review using toy records Concept. Social-source provenance and minimization review using toy records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility before any public-source claim is reused.

Worked reasoning and limits. A matching handle or display name is an unresolved string match, not identity verification, account control or evidence of coordination. In a fixed synthetic packet, records R1 and R2 share handle 'museum_updates' but carry different supplied account IDs, A7 and A8; R3 republishes R1 with origin A7. Normalizing case yields one handle group but two distinct account records, and deduplicating by origin leaves R1/R3 as one lineage. The output is 'two account IDs share a label; ownership unknown'; treating R3 as independent support is the negative control, and removing account IDs requires downgrading even the record linkage rather than looking up a real person.

Why it matters. Social-source provenance matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Social-source provenance and minimization review using toy records**: [ageint051] and [ageint052]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Social-source provenance**, inspect the original passages. Curriculum annotation for [ageint052]: This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Social-source provenance**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Social-source provenance and minimization review**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Social-source provenance** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Social-source provenance**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Reuse the **Social-source provenance** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

17.2.2.3 Lesson 3: Graph-analysis provenance review using instructor-provided records Concept. Graph-analysis provenance review using instructor-provided records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility

before any public-source claim is reused.

Worked reasoning and limits. A graph distinguishes entities, observed relations and hypothesized relations; proximity in a drawing has no evidential meaning. In a fictional static export, E1 says document D mentions project P and E2 says D mentions project Q, both derived from D version 1, paragraph 3, at the same capture time. The typed output is D→P 'mentions' and D→Q 'mentions'; the proposed P→Q 'same owner' edge is rejected because co-mention is not ownership evidence. Retain source/version/time on each edge and log extraction as the transformation; a tool-generated candidate edge does not authenticate identity, and copying D cannot strengthen the rejected relation.

Why it matters. Analysts use **Graph-analysis provenance review** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Graph-analysis provenance review using instructor-provided records**: [ageint051]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Graph-analysis provenance review**, inspect the original passages. No displayable curriculum annotation is available for [ageint051]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Graph-analysis provenance review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Graph-analysis provenance review using instructor-provided**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Graph-analysis provenance review** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Graph-analysis provenance review**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Transfer **Graph-analysis provenance review** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

17.2.2.4 Lesson 4: Custom-source integration governance review using toy records

Concept. Custom-source integration governance review using toy records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility before any public-source claim is reused.

Worked reasoning and limits. Treat the framework here as a model of typed input, transformation and output, using a static export rather than executing reconnaissance modules. Record module/version, supplied input identifier, transformation and returned field so a reviewer can distinguish a source assertion from a tool-derived value. The inherited vendor overview and LinkedIn guide cannot establish current module behaviour; unavailable fields remain unknown, not fabricated defaults.

Why it matters. Without explicit treatment of **Custom-source integration governance review**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Custom-source integration governance review using toy records**: [ageint052] and [ageint053]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Custom-source integration governance review**, inspect the original passages. Curriculum annotation for [ageint052]: This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Custom-source integration governance review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Custom-source integration governance review using**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Custom-source integration governance review** work as an **OSINT provenance and minimization matrix** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Custom-source integration governance review**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Transfer **Custom-source integration governance review** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

17.2.2.5 Lesson 5: Automated-source aggregation governance review using toy records

Concept. Automated-source aggregation governance review using toy records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility before any public-source claim is reused.

Worked reasoning and limits. Automation can multiply dependent findings and propagate one mistaken entity match across many output types. On a supplied event export, group records by upstream origin before counting corroboration and distinguish an event's observation time from the export time. A long results list is neither independent evidence nor permission for live collection; this lesson performs record analysis only.

Why it matters. Automated-source aggregation governance review matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Automated-source aggregation governance review using toy records**: [ageint052]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Automated-source aggregation governance review**, inspect the original passages. Curriculum annotation for [ageint052]: This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Automated-source aggregation governance review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Automated-source aggregation governance review using**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Automated-source aggregation governance review** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop

condition.

Misconception check. Correct the misconception about **Automated-source aggregation governance review**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Apply this module's safe boundary for **Automated-source aggregation governance review** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

17.2.2.6 Lesson 6: Identity-data minimization review using instructor-provided records

Concept. Identity-data minimization review using instructor-provided records evaluates the tool class by provenance, legality, rate limits, identity exposure, and reproducibility before any public-source claim is reused.

Worked reasoning and limits. Document metadata, harvested strings and username-match candidates are different artifact classes with different error modes; none alone proves a person's identity, location or conduct. A metadata author field can be a template default, a harvested address can be stale, and a same-name account can belong to someone else. The Reddit preference thread is not a primary technical specification, so current capabilities and accuracy are unsupported here; use fictional pre-exported artifacts, not live tools or identity lookups.

Why it matters. Analysts use **Identity-data minimization review** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Identity-data minimization review using instructor-provided records**: [ageint054]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Identity-data minimization review**, inspect the original passages. Curriculum annotation for [ageint054]: Recommended OSINT tools and their benefits. Top open source intelligence websites. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Identity-data minimization review**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must record the tool-and-terms descriptor, the bounded claim about **Identity-data minimization review using instructor-provided**, the minimization caveat, the reproducibility uncertainty, the identity-exposure boundary, and the reviewer who approves the use. Shape **Identity-data minimization review** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Identity-data minimization review**: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

Transfer task. Transfer **Identity-data minimization review** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

17.2.2.7 Lesson 7: OSINT Framework (osintframework.com): Module Taxonomy

Concept. OSINT Framework (osintframework.com): Module Taxonomy treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. A directory organizes possible resources; inclusion is not validation of a tool's accuracy, safety, independence or licence. Compare categories by the evidence they could produce, such as a document version versus a candidate relation, rather than by tool count. A missing or outdated entry changes the directory assessment, not the underlying factual claim.

Why it matters. OSINT Framework (osintframework.com) connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **OSINT Framework (osintframework.com): Module Taxonomy**: [ageint051] and [ageint052]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **OSINT Framework (osintframework.com)**, inspect the original passages. Curriculum annotation for [ageint052]: This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **OSINT Framework (osintframework.com)**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **OSINT Framework**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **OSINT Framework (osintframework.com)** work as an **OSINT provenance and minimization matrix** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that OSINT Framework (osintframework.com): Module Taxonomy is optional whenever separate discovery from collection expansion, and map or media interpretation from targeting feels inconvenient.

Transfer task. Transfer **OSINT Framework (osintframework.com)** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

17.2.2.8 Lesson 8: Offline OSINT Environments: VM Architecture and Isolation

Concept. Offline OSINT Environments: VM Architecture and Isolation treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. Offline means no external retrieval or interaction, not merely running inside a VM. Use supplied inert files with network access disabled, no shared credentials and an explicit manifest of inputs; record any text extraction or normalization without overwriting originals. A VM is not proof of containment, and an input that needs active content or a network connection is excluded rather than opened to complete the exercise.

Why it matters. Offline OSINT Environments matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Offline OSINT Environments: VM Architecture and Isolation**: [ageint051] and [ageint052]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Offline OSINT Environments**, inspect the original passages. Curriculum annotation for [ageint052]: This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases. These editorial descriptions are not source-authored quotations or

independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Offline OSINT Environments**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **Offline OSINT Environments**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Offline OSINT Environments** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Offline OSINT Environments: VM Architecture and Isolation establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Offline OSINT Environments** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

17.2.2.9 Lesson 9: IntelTechniques OSINT 11th Edition Methods and Workflows

Concept. IntelTechniques OSINT 11th Edition Methods and Workflows treats open sources as publicly available evidence that still requires provenance, corroboration, legality, and minimization before reuse.

Worked reasoning and limits. The publisher's listing can support edition identity, not the validity of every technique or continued availability of a service [ageint055]. The inherited third-party PDF link is bibliographic provenance, not a licence to obtain or redistribute the book; no exercise depends on it. Compare an edition-dated claim against the supplied snapshot's date, and leave current functionality unknown when no authorized primary specification is available.

Why it matters. IntelTechniques OSINT 11th Edition Methods connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **IntelTechniques OSINT 11th Edition Methods and Workflows**: [ageint055] and [ageint056]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **IntelTechniques OSINT 11th Edition Methods**, inspect the original passages. Curriculum annotation for [ageint055]: OSINT Techniques. Resources for Uncovering Online Information - 11th Edition (2024). Curriculum annotation for [ageint056]: All tutorials in this book were confirmed accurate as of November 1, 2024. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **IntelTechniques OSINT 11th Edition Methods**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must name the source descriptor, the bounded claim about **IntelTechniques OSINT 11th Edition Methods**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **IntelTechniques OSINT 11th Edition Methods** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that IntelTechniques OSINT 11th Edition Methods and Workflows replaces human review whenever evidence looks plausible.

Transfer task. Transfer **IntelTechniques OSINT 11th Edition Methods** to a second module by preserving source-quality review and non-sensitive geospatial interpretation, changing the source evidence, and naming a new reviewer.

17.2.3 OSINT Techniques and Tools worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic public-resilience team checks whether open data supports a non-sensitive evacuation-route map. [ageint251]; [ageint252].

Contextual source routes. For module 10's worked-example section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **open-source intelligence governance**. Learners use a **OSINT provenance and minimization matrix** and keep this boundary visible: No exposed-service lookup, credentialed access, identity exposure, doxxing, or live collection expansion.

Frame. The classroom question centers on **Search-exposure provenance review using instructor-provided records**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **Search-exposure provenance review using instructor-provided records** scenario, use saved fictional road layer A with 100-metre uncertainty and a 2023 date, notice B closing one of two nearby bridges in 2026, repost C copying B, and supplied capture metadata and classroom reuse terms. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Search-exposure provenance review using instructor-provided records**, students first record origin, reuse terms, spatial reference, resolution, and relevant dates; then compare the notice with both bridge footprints and trace C to B; remove C as a control so corroboration does not increase through copying. Minimize personal fields and stop a route recommendation when the old layer cannot resolve bridge identity; hand the gap to the mapping instructor. Pause whenever an inference about Search-exposure provenance review using instructor-provided records appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a source-quality matrix and map note recording one underlying closure notice, unresolved bridge identity and present conditions, and no safe-route judgment; the allowed classroom reuse is documented separately from source reliability, with no live tracking, collection expansion, or identity exposure Retain it as the **OSINT provenance and minimization matrix** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Search-exposure provenance review using instructor-provided records** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to source-quality review and non-sensitive geospatial interpretation, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Search-exposure provenance review using instructor-provided records** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

17.2.4 OSINT Techniques and Tools practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

Contextual source routes. For module 10's practice-sequence section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International

Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Search-exposure provenance review using instructor-provided records, Social-source provenance and minimization review using toy records, Graph-analysis provenance review using instructor-provided records; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Open-Source and Geospatial Intelligence Integrity** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Search-exposure provenance review using instructor-provided records: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the OSINT provenance and minimization matrix fields for Search-exposure provenance review using instructor-provided records.	Unit profile note.	Evidence artifacts include provenance chain, terms-of-use note.
4. Challenge	Test the misconception that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.	Failure-mode note.	The artifact applies the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

17.2.4.1 OSINT Techniques and Tools instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. [ageint251]; [ageint252].

17.2.4.2 OSINT Techniques and Tools extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 17.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.2.5 OSINT Techniques and Tools knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 17.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Search-exposure provenance review using instructor-provided records**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **Search-exposure provenance review using instructor-provided records** to the final topic, **IntelTechniques OSINT 11th Edition Methods and Workflows**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Open-Source and Geospatial Intelligence Integrity** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which source is available but not reliable enough for the claim?
5. Correct this misconception: that a source being publicly accessible means collecting it is unrestricted, ungoverned, and free of legal, ethical, and scoping limits.

17.2.5.1 OSINT Techniques and Tools answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Search-exposure provenance review using instructor-provided records** without source evidence, uncertainty, or a safe transfer task.

17.3 OSINT Techniques and Tools assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 17.

17.3.1 OSINT Techniques and Tools evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 17.

17.3.2 OSINT Techniques and Tools transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 17.

17.3.2.1 OSINT Techniques and Tools lineage and source tradition: profile, concepts, and first anchors This sits in the **Open-Source and Geospatial Intelligence Integrity** lineage: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. [ageint251]; [ageint252].

17.3.2.2 OSINT Techniques and Tools working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 17.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**, with provenance and reviewability throughout.

17.3.2.3 OSINT Techniques and Tools knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** supplied public-source records, acquisition and publication times, origin families, sensor metadata, and reuse permissions. [ageint251]; [ageint252].
- **Transforms:** trace originals, distinguish availability from permission, compare spatial and temporal fit, test registration, and challenge apparent corroboration.
- **Outputs:** provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff.
- **Failure modes:** map precision as certainty, old media as current observation, source-count confidence, or identity and location targeting.

17.3.2.4 OSINT Techniques and Tools transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 17.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.
- **Evidence contract:** keep the **Open-Source and Geospatial Intelligence Integrity** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff that another reviewer can audit.

17.3.2.5 OSINT Techniques and Tools profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 17.

The matched profile emphasizes public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. The method stack is source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration; the local topic cluster is **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.3 OSINT Techniques and Tools evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 17.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Open-Source and Geospatial Intelligence Integrity** profile tells reviewers what evidence is strong enough for the module artifact built around **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.3.1 OSINT Techniques and Tools guide source spine: inherited keys and local citation roles Primary guide citations: [ageint251]; [ageint252]; [ageint269]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint050]; [ageint051]; [ageint052]; [ageint053]; [ageint054]; [ageint055]; [ageint056].

17.3.3.2 OSINT Techniques and Tools verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint251]; [ageint252].

Tier	What counts	How it is used
Source guide	[ageint251]; [ageint252]; [ageint269]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint050]; [ageint051]; [ageint052]; [ageint053]; [ageint054]; [ageint055]; [ageint056].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 10's source-canon section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records** and [ageint251]; [ageint252], but only directly verified source URLs are encoded as citations.

17.3.3.3 OSINT Techniques and Tools intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. [ageint251]; [ageint252].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

17.3.3.4 OSINT Techniques and Tools runtime-to-reader map: generated sections and verifier surfaces **Navigation.** Parent section: Section 17.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	10.99	10.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind OSINT Techniques and Tools to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	10.101	10.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for OSINT Techniques and Tools	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	10.102	10.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for OSINT Techniques and Tools	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Search-exposure provenance review using instructor-provided records	10.1	10.1 source title transformed into safe curriculum treatment; original: Search Engine Tradecraft: Google Dorking, Yandex, Bing, Shodan	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Social-source provenance and minimization review using toy records	10.2	10.2 source title transformed into safe curriculum treatment; original: Social Media OSINT: Scraping, Graph Analysis, Identity Verification	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Offline OSINT Environments: VM Architecture and Isolation	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
IntelTechniques OSINT 11th Edition Methods and Workflows	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

17.3.3.6 OSINT Techniques and Tools annotated source ledger: real titles and local contribution Each source cited by this **Open-Source and Geospatial Intelligence Integrity** module is paired below with its real title and a one-line note on what it contributes to **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

Source	Cited work	Curriculum annotation	Status
[ageint251]	European Data Governance Act	The European Commission page explaining the Data Governance Act, an EU regulation that became applicable in September 2023 to build trust in data sharing and ease reuse of data. It outlines four mechanisms: facilitating reuse of protected public-sector data, establishing trusted data intermediaries, enabling voluntary data sharing by citizens and businesses, and removing barriers to cross-sector and cross-border data use.	verified source-guide; annotation metadata, not claim verification
[ageint252]	Data Act Explained	An official European Commission explainer on the EU Data Act, which became applicable on 12 September 2025.	verified source-guide; annotation metadata, not claim verification
[ageint269]	Data on the Web Best Practices	A W3C Recommendation, "Data on the Web Best Practices," published January 31, 2017 by the Data on the Web Best Practices Working Group. It offers 35 best practices for publishing and consuming data on the Web, covering metadata, licensing and provenance, data quality, dataset versioning, persistent URIs, machine-readable formats, vocabulary reuse, access methods, preservation, and feedback.	verified source-guide; annotation metadata, not claim verification
[ageint276]	What is a Data Protection Impact Assessment and When Is This Mandatory?	A European Data Protection Board FAQ page, part of its data protection guide for small businesses, explaining Data Protection Impact Assessments (DPIAs) and when they are mandatory. It describes a DPIA as a written assessment of the impact of a planned processing operation, required when processing poses high risks to individuals' rights.	verified source-guide; annotation metadata, not claim verification
[ageint277]	Endorsed WP29 Guidelines	This is a European Data Protection Board webpage listing guidelines and documents originating from the Article 29 Working Party that the EDPB endorsed at its first plenary meeting. The catalogued materials relate to the GDPR and cover topics such as consent and transparency, data breach notification, automated decision-making and profiling, data protection impact assessments, data protection officers, and binding corporate rules.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint284]	Verifiable Credential Data Integrity 1.0	The W3C Recommendation for Verifiable Credential Data Integrity 1.0, published May 2025, defining mechanisms for ensuring the authenticity and integrity of verifiable credentials using cryptographic proofs. It specifies a process of data transformation, hashing, and proof generation, and a corresponding verification procedure, along with a proof data model containing properties such as type, verification method, purpose, and proof value.	verified source-guide; annotation metadata, not claim verification
[ageint288]	Algorithmic Transparency Recording Standard Hub	A GOV.UK collection page serving as the hub for the UK Algorithmic Transparency Recording Standard (ATRS), maintained by the Government Digital Service. It provides a standardized template for documenting public-sector use of algorithmic tools, completion guidance, policy on scope and compliance, and a searchable repository of published transparency records.	verified source-guide; annotation metadata, not claim verification
[ageint289]	Guidance for Organisations Using the Algorithmic Transparency Recording Standard	This is a GOV.UK guidance page published by the Government Digital Service that instructs public sector organizations on completing the Algorithmic Transparency Recording Standard (ATRS) template and publishing their records to the GOV.UK repository. It applies both to central government bodies required to publish under mandatory policy and to other public sector bodies doing so voluntarily.	verified source-guide; annotation metadata, not claim verification
[ageint293]	Inventory of NARA Artificial Intelligence (AI) Use Cases	The National Archives and Records Administration (NARA) official inventory of its artificial intelligence use cases, documenting 14 projects across deployed, pilot, and planned stages. Deployed efforts include workplace productivity tools, automated tagging for museum experiences, and historical record retrieval, while pilots cover PII detection and redaction, semantic search, and metadata generation, and planned work targets FOIA processing and public search.	verified source-guide; annotation metadata, not claim verification
[ageint050]	[Thoughts on Bazzell's New Book? Open Source Intelligence	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint051]	Cited source (see bibliography)	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint052]	What is Open Source Intelligence & Top 10 Tools - Lampyre	This article defines open source intelligence as the practice of gathering information from publicly available data for security, business, and investigative purposes, drawing on websites, social media, government records, and public databases.	verified source-guide; annotation metadata, not claim verification
[ageint053]	A Guide to Choosing the Right Tool for Your Needs	No displayable curriculum annotation; see original work for scope.	verified practitioner context; secondary evidence only; annotation metadata, not claim verification
[ageint054]	What are your preferred OSINT tools? : r/hacking	Recommended OSINT tools and their benefits. Top open source intelligence websites.	original source-guide; annotation metadata, not claim verification
[ageint055]	IntelTechniques Books	OSINT Techniques. Resources for Uncovering Online Information - 11th Edition (2024).	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint056]	IntelTechniques - OSINT 11 2025.04.02 .pdf - elhacker.INFO	All tutorials in this book were confirmed accurate as of November 1, 2024.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 17; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

17.3.4 OSINT Techniques and Tools governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 17.

17.3.5 OSINT Techniques and Tools analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 10's governance-boundary section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Open-Source and Geospatial Intelligence Integrity** for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. [ageint251]; [ageint252].

Curriculum topic spine: Search-exposure provenance review using instructor-provided records, **Social-source provenance and minimization review using toy records**, **Graph-analysis provenance review using instructor-provided records**. **Recorded source cluster; inspection and scope limits apply:** [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]; [National Geospatial-Intelligence Agency, 2026a]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015].

Conceptual depth: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests.

Method stack: source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration.

Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable.

Known failure modes: privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability.

Defensive boundary: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting. Applied to **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

Anchor	Why it matters here
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Department of State, 2024]	Official strategy source for lawful OSINT governance, discovery, validation, and dissemination. Checked as of 2026-05-21; role: curriculum_anchor.
[International Organization for Standardization, 2013]	International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026b]	Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026a]	Official NGA source on GEOINT AI, data quality, model performance, interoperability, analyst interaction, and standards leadership. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.

17.3.5.1 OSINT Techniques and Tools evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Open-Source and Geospatial Intelligence Integrity** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint251]; [ageint252].

17.3.6 OSINT Techniques and Tools agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 17.

AGEINT translation is bounded by the **Open-Source and Geospatial Intelligence Integrity** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.6.1 OSINT Techniques and Tools permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 17.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.6.2 OSINT Techniques and Tools excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint251]; [ageint252] and **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

17.3.7 OSINT Techniques and Tools governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 17.

Governance is practiced as a gate on the **Open-Source and Geospatial Intelligence Integrity** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.7.1 OSINT Techniques and Tools governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint251]; [ageint252].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Open-Source and Geospatial Intelligence Integrity** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

17.3.7.2 OSINT Techniques and Tools evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.7.3 OSINT Techniques and Tools current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. [ageint251]; [ageint252].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_ic_osint_strategy` for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
What does the module inherit from `official_state_osint_strategy` for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**?	Open Source Intelligence Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official strategy source for lawful OSINT governance, discovery, validation, and dissemination.
What does the module inherit from `official_iso_19157_data_quality` for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**?	ISO 19157:2013 Geographic Information - Data Quality; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing.
What does the module inherit from `official_nga_strategy` for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**?	NGA Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 17; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

17.3.8 OSINT Techniques and Tools assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 17.

17.3.9 OSINT Techniques and Tools assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 17.

17.3.9.1 OSINT Techniques and Tools capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records** and [ageint251]; [ageint252].

17.3.9.2 OSINT Techniques and Tools instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records** and [ageint251]; [ageint252].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

17.3.9.3 OSINT Techniques and Tools assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Search-exposure provenance review using instructor-provided records; **Social-source provenance and minimization review using toy records**; **Graph-analysis provenance review using instructor-provided records**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
Custom-source integration governance review using toy records; **Automated-source aggregation governance review using toy records**; **Identity-data minimization review using instructor-provided records**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
OSINT Framework (osintframework.com): Module Taxonomy; **Offline OSINT Environments: VM Architecture and Isolation**; **IntelTechniques OSINT 11th Edition Methods and Workflows**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

17.3.10 OSINT Techniques and Tools refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint251]; [ageint252] and **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**.

17.3.10.1 OSINT Techniques and Tools refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. The local signals begin with [ageint251]; [ageint252].

17.3.10.2 OSINT Techniques and Tools claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**, and the source spine for these checks begins with [ageint251]; [ageint252].

17.3.11 OSINT Techniques and Tools reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint251]; [ageint252].

Contextual source routes. For module 10's review-checklist section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records**. [ageint251]; [ageint252].

- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

17.3.12 OSINT Techniques and Tools learning-path links: module map, overview, and curriculum atlas

Use the cross-links below to place **Search-exposure provenance review using instructor-provided records; Social-source provenance and minimization review using toy records** in the wider unit: the orientation sets the frame, the parent unit supplies the shared safety posture, and the neighbouring modules show what evidence enters and leaves. Lead sources: [ageint251]; [ageint252].

Section 2, Section 15, Section 16, Section 18

18 GEOINT and Imagery Intelligence

18.0.1 GEOINT and Imagery Intelligence figures and course links: visual evidence, source flow, and navigation

The module uses Figure 49, Figure 50, Figure 51, and Figure 45 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 15, Section 17, Section 19.
This module teaches the **Open-Source and Geospatial Intelligence Integrity** lane through a bounded, source-backed coursebook chapter. [ageint253]; [ageint255].

18.1 Open-Source and Geospatial Intelligence Integrity frame for GEOINT and Imagery Intelligence: source context, topic focus, and reader task

Navigation. Parent section: Section 18.

18.1.1 GEOINT and Imagery Intelligence orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 18.

18.1.2 GEOINT and Imagery Intelligence conceptual primer: source context, core model, and reader task

This chapter teaches OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.
The central distinction is to separate discovery from collection expansion, and map or media interpretation from targeting. Core topics include **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples; Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint253]; [ageint255].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **Imagery quality literacy: resolution, temporal fit, and uncertainty** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

18.1.3 GEOINT and Imagery Intelligence learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 18.

- Connect **Imagery quality literacy: resolution, temporal fit, and uncertainty and GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** to **Open-Source and Geospatial Intelligence Integrity** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting.

18.1.4 GEOINT and Imagery Intelligence core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 18.

Term	Working definition
Provenance	the origin, custody, and transformation history of a source, which helps evaluate a claim but does not prove its truth or grant reuse permission
Corroboration	comparison of relevant, sufficiently independent evidence for a specific claim; copied sources do not become independent through repetition
Recency	the time relationship between source creation, discovery, and claim
Geospatial quality	accuracy, completeness, temporal fitness, and usability of location data
Minimization	limiting retained information to what the accountable question requires

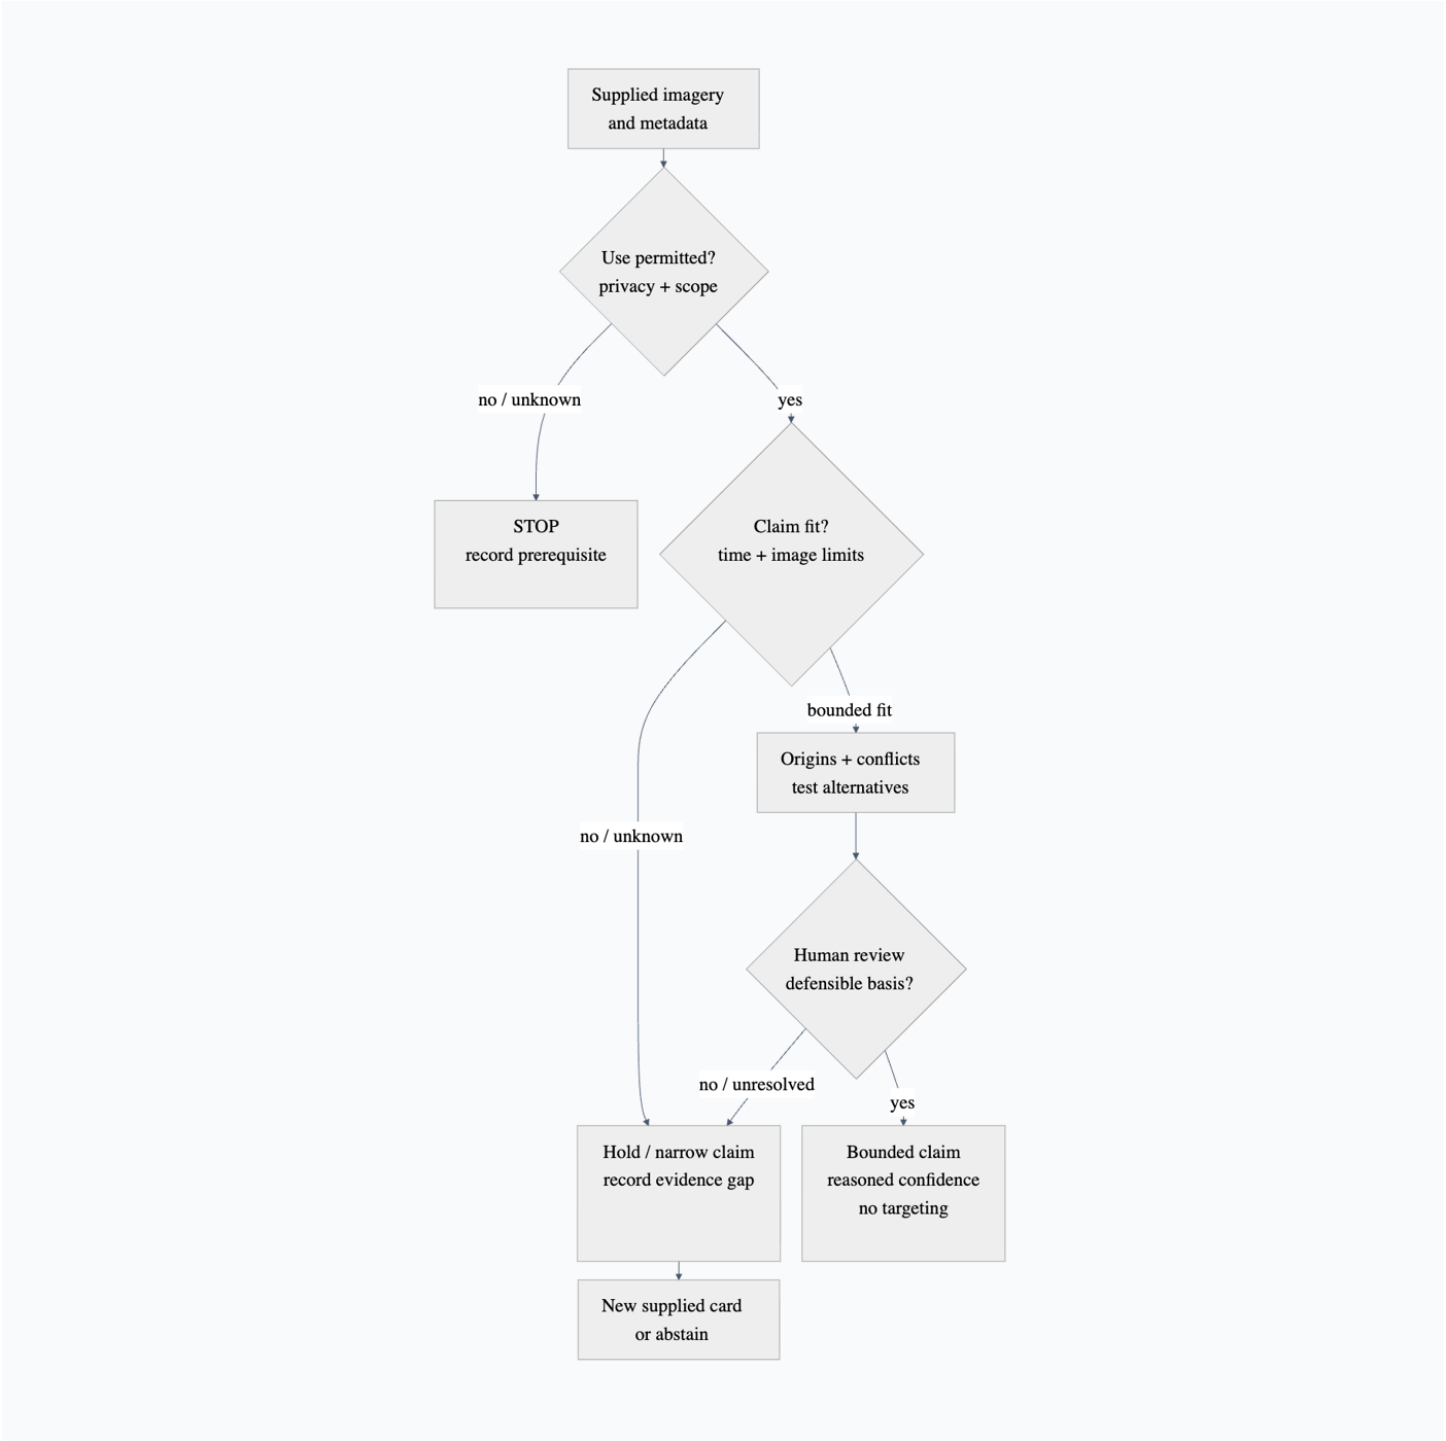

Figure 49: This instructional appraisal separates imagery fitness from confidence judgment. Acquisition timing, resolution, processing limitations, origin independence, and conflicting observations must be assessed against a specific claim; stale imagery may be unsuitable rather than moderately informative. Confidence requires a documented argument and named review, not automatic promotion from multiple sources or a minimization check. Classroom gaps request supplied fixtures, not live re-tasking. Outputs are classroom interpretations, not targeting or actor-attribution products.

Figure 50: Public-domain USGS EROS declassified imagery of the Forbidden City as a local historical image for GEOINT source-provenance discussion. Its reader value is to make U.S. Geological Survey provenance, 1966 approx. collection context, public-domain status, and analytic reuse boundary visible at a glance, with the open source intelligence osint / geoint and imagery intelligence section as the source section and defensive review as the boundary.

Figure 51: Public-domain USGS EROS KH-9 image used as a historical example of declassified remote-sensing material with explicit provenance. It is anchored to the open source intelligence osint / geoint and imagery intelligence section; use it to inspect U.S. Geological Survey provenance, 1982-07-22 collection context, public-domain status, and analytic reuse boundary while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

18.2 Requirements-to-Evidence Lens path for GEOINT and Imagery Intelligence: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 18.

18.2.1 GEOINT and Imagery Intelligence practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 18.

18.2.2 GEOINT and Imagery Intelligence topic lessons: source-backed concepts and transfer tasks

GEOINT and Imagery Intelligence builds OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The sequence opens with **Imagery quality literacy: resolution, temporal fit, and uncertainty**, **GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, **Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 45; module overview Section 18; curriculum atlas Section 2.

Contextual source routes. For module 11's topic-lessons section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

18.2.2.1 Lesson 1: Imagery quality literacy: resolution, temporal fit, and uncertainty

Concept. Imagery quality literacy: resolution, temporal fit, and uncertainty treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. Imagery interpretation concerns what an image supports; mapping locates representations in a reference system; GEOINT integrates imagery and geospatial information to assess spatial relationships. Coordinates need a declared coordinate reference system, datum and uncertainty, while a sharp image can still be poorly registered. MCRP 2-10B.4 is the GEOINT support manual, not a general reconnaissance manual [ageint057]; doctrine describes a practice and does not validate a particular image interpretation.

Why it matters. Imagery quality literacy matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Imagery quality literacy: resolution, temporal fit, and uncertainty**: [ageint057]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Imagery quality literacy**, inspect the original passages. Curriculum annotation for [ageint057]: MCRP 2-10B.4 in the source guide links to the Marines GEOINT manual, not a reconnaissance manual. The linked PDF is 'Geospatial Intelligence Support to Operations'; verify the intended citation before reuse. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Imagery quality literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Imagery quality literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Imagery quality literacy** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Imagery quality literacy**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Transfer **Imagery quality literacy** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

18.2.2.2 Lesson 2: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. A body of knowledge organizes competencies such as remote sensing, geospatial data management and visualization; it is not evidence that an analyst has mastered them [ageint058]. Diagnose a map by asking whether a reader can recover the coordinate system, scale, time coverage and missing-data treatment. Competency coverage and measured interpretation accuracy require different evidence.

Why it matters. Analysts use **GEOINT data-quality audit** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint058]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **GEOINT data-quality audit**, inspect the original passages. Curriculum annotation for [ageint058]: The GEOINT Essential Body of Knowledge (Version 2.0, 2019), published by the United States Geospatial Intelligence Foundation (USGIF). First developed in 2014 and revised with community input, it defines the competencies, standards, and learning objectives needed to succeed in the geospatial intelligence discipline. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **GEOINT data-quality audit**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **GEOINT data-quality audit using provided**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **GEOINT data-quality audit** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **GEOINT data-quality audit**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Transfer **GEOINT data-quality audit** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

18.2.2.3 Lesson 3: Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. The raw inherited heading groups unlike providers: Maxar and Planet are commercial names, whereas Sentinel-1/2 belong to the Copernicus programme, not a commercial platform family. Compare supplied scenes by acquisition time, sensor modality, ground sampling, usable coverage and licence, not brand alone. The cited library is a discovery catalogue, not a primary specification for any platform's current resolution or revisit performance; such numerical claims remain unknown here.

Why it matters. Commercial Platforms and Public Programmes connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint059]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Commercial Platforms and Public Programmes**, inspect the original passages. Curriculum annotation for [ageint059]: A GitHub repository describing itself as a reference toolkit for geolocation and chronolocation in digital investigations. It curates open-source resources organized into categories including satellite imagery, mapping, infrastructure and transport tracking, weather and environmental monitoring, shadow and sun-position tools for time-of-day analysis, crisis and conflict mapping, image forensics, and geocoding utilities. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Commercial Platforms and Public Programmes**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Commercial Platforms and Public Programmes**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Commercial Platforms and Public Programmes** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Commercial Platforms and Public Programmes**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Reuse the **Commercial Platforms and Public Programmes** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

18.2.2.4 Lesson 4: Claim-ledger memory exercise that tracks evidence changes rather than people

Concept. Claim-ledger memory exercise that tracks evidence changes rather than people — Maintain claim memory as versioned source dependencies, correction history, retention decisions, and contamination checks; remembered text is not independent evidence, and this exercise does not track people or assets.

Worked reasoning and limits. In a completed synthetic scene pair with matching sensor, grid scale, processing, illumination and clear coverage, a fictional shed edge is at pixel 40 in A and 43 in B, while three fixed markers also shift by +3 pixels. Registering B by those markers removes all shed displacement, yielding 'no resolved shed movement'; a variant with edge 46 leaves a 3-pixel residual, but a supplied ±2-pixel bound per image permits a ±4-pixel worst-case difference and the movement conclusion still stops. In a changed-feature control with edge 49, the corrected residual is 6 pixels and exceeds that bound, supporting a resolved positional difference under these assumptions, not object identity or intent. Removing markers makes registration unknown; cloud, season, sensor or resolution incompatibility likewise requires 'not comparable', not automatic confidence from freshness or source count. A thumbnail is no independent acquisition, publication time does not date the observed change, and two snapshots cannot establish a person's routine. USGIF's framework distinguishes registration, error and cross-sensor correction, but does not validate this author-defined exercise or supply a universal acceptable threshold [ageint058].

Why it matters. Claim-ledger memory exercise that tracks evidence changes rather than people matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Claim-ledger memory exercise that tracks evidence changes rather than people**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Claim-ledger memory exercise that tracks evidence changes rather than people**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Claim-ledger memory exercise that tracks evidence changes rather than people**, build a claim-change ledger linking original and revised passages, affected claims, retirement decisions, and reviewer corrections. Shape the same topic work as an **OSINT provenance and minimization matrix** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that stored claim memory is independent evidence or remains valid after its source has changed.

Transfer task. Reuse the **Claim-ledger memory exercise that tracks evidence changes rather than people** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

18.2.2.5 Lesson 5: GEOINT in Counterinsurgency and Strike: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. GEOINT in Counterinsurgency and Strike: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. This inherited operational heading is studied as a limit on inference, not as targeting instruction. A visible structure, vehicle-like shape or spatial association does not establish identity, hostile intent, civilian status or lawful authority to act; missing coverage is not proof of absence. The NGA mission page and analytic standards do not supply targeting authority or validate an operational decision, and this course excludes surveillance, live locations and strike support.

Why it matters. GEOINT in Counterinsurgency and Strike connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **GEOINT in Counterinsurgency and Strike: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-

guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **GEOINT in Counterinsurgency and Strike**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **GEOINT in Counterinsurgency and Strike**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **GEOINT in Counterinsurgency and Strike**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **GEOINT in Counterinsurgency and Strike** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **GEOINT in Counterinsurgency and Strike**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Transfer **GEOINT in Counterinsurgency and Strike** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

18.2.2.6 Lesson 6: DoD GEOINT Accreditation and Training: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. DoD GEOINT Accreditation and Training: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. Separate programme accreditation, professional certification, a training requirement and accuracy on a particular task. Read a supplied dated manual extract for the institution, role and requirement it actually governs; neither the manual title nor course completion establishes certification. Current applicability or supersession remains unknown unless a dated authoritative issuance is supplied.

Why it matters. Analysts use **DoD GEOINT Accreditation and Training** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **DoD GEOINT Accreditation and Training: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint060]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **DoD GEOINT Accreditation and Training**, inspect the original passages. No displayable curriculum annotation is available for [ageint060]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **DoD GEOINT Accreditation and Training**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **DoD GEOINT Accreditation and Training**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **DoD GEOINT Accreditation and Training** work as an **OSINT provenance and minimization matrix** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **DoD GEOINT Accreditation and Training**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Transfer **DoD GEOINT Accreditation and Training** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

18.2.2.7 Lesson 7: MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. The cited title is Geospatial Intelligence Support to Operations [ageint057]. Distinguish a doctrinal product category and its intended audience from the observations needed to populate that product. When a classroom packet lacks sensor metadata or a common spatial reference, report the missing input instead of borrowing certainty from the manual's authority.

Why it matters. Without explicit treatment of **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint057]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, inspect the original passages. Curriculum annotation for [ageint057]: MCRP 2-10B.4 in the source guide links to the Marines GEOINT manual, not a reconnaissance manual. The linked PDF is 'Geospatial Intelligence Support to Operations'; verify the intended citation before reuse. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **MCRP 2-10B 4**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **MCRP 2-10B 4**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** work as an **OSINT provenance and minimization matrix** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Reuse the **MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

18.2.2.8 Lesson 8: Imagery collection-platform literacy: resolution and revisit tradeoffs

Concept. Imagery collection-platform literacy: resolution and revisit tradeoffs treats location evidence as a quality and uncertainty problem, separating map interpretation from

targeting or attribution.

Worked reasoning and limits. A detector score is a model output, not a calibrated probability of identity, activity or intent; retain model version, input derivative, class definition and threshold. In a fictional held-out answer sheet for model M1, squares S1/S2 are labelled present and S3/S4 absent, while thresholded predictions are present/present/present/absent: this gives two true positives, one false positive and one true negative on these four fixtures only. The S3 false detection prevents an 'every detection is real' conclusion, and duplicate crops cannot enlarge the independent evaluation set; no live model was evaluated or real-world accuracy established. Chronolocation concerns acquisition time, not upload time, and an uncalibrated clock or ambiguous shadows leaves the time interval unresolved. Resampling and an AI caption are transformations, not new observations or independent corroboration.

Why it matters. Analysts use **Imagery collection-platform literacy** to separate discovery from collection expansion, and map or media interpretation from targeting. A defensible treatment names the judgment it enables for source-quality review and non-sensitive geospatial interpretation review, the proof limit that privacy drift would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Imagery collection-platform literacy: resolution and revisit tradeoffs**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Imagery collection-platform literacy**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Imagery collection-platform literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Imagery collection-platform literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Imagery collection-platform literacy** work as an **OSINT provenance and minimization matrix** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Imagery collection-platform literacy**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Reuse the **Imagery collection-platform literacy** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

18.2.2.9 Lesson 9: Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples

Concept. Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. A geospatial resource catalogue aids discovery, but linked tools and datasets retain their own provenance, versions, licences and known limits [ageint059]. Distinguish a catalogue entry from the source scene, and preserve the exact scene identifier plus all cropping, reprojection and enhancement steps. A reachable link establishes neither factual truth nor permission for reuse; no external retrieval is required for these exercises.

Why it matters. Open-Source Geospatial Intelligence Library connects classroom vocabulary to Open-Source and Geospatial Intelligence Integrity practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**: [ageint059]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Open-Source Geospatial Intelligence Library**, inspect the original passages. Curriculum annotation for [ageint059]: A GitHub repository describing itself as a reference toolkit for geolocation and chronolocation in digital investigations. It curates open-source resources organized into categories including satellite imagery, mapping, infrastructure and transport tracking, weather and environmental monitoring, shadow and sun-position tools for time-of-day analysis, crisis and conflict mapping, image forensics, and geocoding utilities. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Open-Source Geospatial Intelligence Library**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Open-Source Geospatial Intelligence Library**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Open-Source Geospatial Intelligence Library** work as an **OSINT provenance and minimization matrix** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Open-Source Geospatial Intelligence Library**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Apply this module's safe boundary for **Open-Source Geospatial Intelligence Library** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

18.2.3 GEOINT and Imagery Intelligence worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic public-resilience team checks whether open data supports a non-sensitive evacuation-route map. [ageint253]; [ageint255].

Contextual source routes. For module 11's worked-example section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **open-source intelligence governance**. Learners use a **OSINT provenance and minimization matrix** and keep this boundary visible: No exposed-service lookup, credentialed access, identity exposure, doxxing, or live collection expansion.

Frame. The classroom question centers on **Imagery quality literacy: resolution, temporal fit, and uncertainty**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **Imagery quality literacy: resolution, temporal fit, and uncertainty** scenario, use saved fictional road layer A with 100-metre uncertainty and a 2023 date, notice B closing one of two nearby bridges in 2026, repost C copying B, and supplied capture metadata and classroom reuse terms. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this

bounded exercise.

Analysis. For **Imagery quality literacy: resolution, temporal fit, and uncertainty**, students first record origin, reuse terms, spatial reference, resolution, and relevant dates; then compare the notice with both bridge footprints and trace C to B; remove C as a control so corroboration does not increase through copying. Minimize personal fields and stop a route recommendation when the old layer cannot resolve bridge identity; hand the gap to the mapping instructor. Pause whenever an inference about Imagery quality literacy: resolution, temporal fit, and uncertainty appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a source-quality matrix and map note recording one underlying closure notice, unresolved bridge identity and present conditions, and no safe-route judgment; the allowed classroom reuse is documented separately from source reliability, with no live tracking, collection expansion, or identity exposure Retain it as the **OSINT provenance and minimization matrix** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Imagery quality literacy: resolution, temporal fit, and uncertainty** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to source-quality review and non-sensitive geospatial interpretation, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Imagery quality literacy: resolution, temporal fit, and uncertainty** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

18.2.4 GEOINT and Imagery Intelligence practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

Contextual source routes. For module 11's practice-sequence section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Imagery quality literacy: resolution, temporal fit, and uncertainty, GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples, Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Open-Source and Geospatial Intelligence Integrity** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Imagery quality literacy: resolution, temporal fit, and uncertainty: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the OSINT provenance and minimization matrix fields for Imagery quality literacy: resolution, temporal fit, and uncertainty.	Unit profile note.	Evidence artifacts include provenance chain, terms-of-use note.
4. Challenge	Test the misconception that a visible feature is enough for a confident geospatial claim.	Failure-mode note.	The artifact applies the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

18.2.4.1 GEOINT and Imagery Intelligence instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. [ageint253]; [ageint255].

18.2.4.2 GEOINT and Imagery Intelligence extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 18.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.2.5 GEOINT and Imagery Intelligence knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 18.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Imagery quality literacy: resolution, temporal fit, and uncertainty**.

2. Transfer the **Requirements-to-Evidence Lens** artifact from **Imagery quality literacy: resolution, temporal fit, and uncertainty** to the final topic, **Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Open-Source and Geospatial Intelligence Integrity** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which source is available but not reliable enough for the claim?
5. Correct this misconception: that a visible feature is enough for a confident geospatial claim.

18.2.5.1 GEOINT and Imagery Intelligence answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Imagery quality literacy: resolution, temporal fit, and uncertainty** without source evidence, uncertainty, or a safe transfer task.

18.3 GEOINT and Imagery Intelligence assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 18.

18.3.1 GEOINT and Imagery Intelligence evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 18.

18.3.2 GEOINT and Imagery Intelligence transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 18.

18.3.2.1 GEOINT and Imagery Intelligence lineage and source tradition: profile, concepts, and first anchors This sits in the **Open-Source and Geospatial Intelligence Integrity** lineage: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. [ageint253]; [ageint255].

18.3.2.2 GEOINT and Imagery Intelligence working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 18.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, with provenance and reviewability throughout.

18.3.2.3 GEOINT and Imagery Intelligence knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** supplied public-source records, acquisition and publication times, origin families, sensor metadata, and reuse permissions. [ageint253]; [ageint255].
- **Transforms:** trace originals, distinguish availability from permission, compare spatial and temporal fit, test registration, and challenge apparent corroboration.
- **Outputs:** provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff.
- **Failure modes:** map precision as certainty, old media as current observation, source-count confidence, or identity and location targeting.

18.3.2.4 GEOINT and Imagery Intelligence transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 18.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.
- **Evidence contract:** keep the **Open-Source and Geospatial Intelligence Integrity** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff that another reviewer can audit.

18.3.2.5 GEOINT and Imagery Intelligence profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 18.

The matched profile emphasizes public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. The method stack is source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration; the local topic cluster is **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.3 GEOINT and Imagery Intelligence evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 18.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Open-Source and Geospatial Intelligence Integrity** profile tells reviewers what evidence is strong enough for the module artifact built around **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.3.1 GEOINT and Imagery Intelligence guide source spine: inherited keys and local citation roles Primary guide citations: [ageint253]; [ageint255]; [ageint270]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint057]; [ageint058]; [ageint059]; [ageint060]; [ageint301]; [ageint298]; [ageint302]; [ageint297].

18.3.3.2 GEOINT and Imagery Intelligence verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint253]; [ageint255].

Tier	What counts	How it is used
Source guide	[ageint253]; [ageint255]; [ageint270]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint057]; [ageint058]; [ageint059]; [ageint060]; [ageint301]; [ageint298]; [ageint302]; [ageint297].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 11's source-canon section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** and [ageint253]; [ageint255], but only directly verified source URLs are encoded as citations.

18.3.3.3 GEOINT and Imagery Intelligence intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. [ageint253]; [ageint255].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

18.3.3.4 GEOINT and Imagery Intelligence runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 18.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	11.99	11.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind GEOINT and Imagery Intelligence to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	11.101	11.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for GEOINT and Imagery Intelligence	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	11.102	11.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for GEOINT and Imagery Intelligence	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Imagery quality literacy: resolution, temporal fit, and uncertainty	11.1	11.1 source title transformed into safe curriculum treatment; original: Geospatial Intelligence Fundamentals: IMINT, GEOINT, Mapping	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.2	11.2 source title transformed into safe curriculum treatment; original: GEOINT Essential Body of Knowledge (USGIF)	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.3	11.3 source title transformed into safe curriculum treatment; original: Commercial Platforms and Public Programmes: Maxar, Planet, Sentinel-1/2	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Claim-ledger memory exercise that tracks evidence changes rather than people	11.4	11.4 source title transformed into safe curriculum treatment; original: Change Detection and Pattern-of-Life Imagery Analysis	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.5	11.5 source title transformed into safe curriculum treatment; original: GEOINT in Counterinsurgency and Strike Operations	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.6	11.6 source title transformed into safe curriculum treatment; original: DoD GEOINT Accreditation and Training Standards	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.7	11.7 source title transformed into safe curriculum treatment; original: MCRP 2-10B.4: USMC GEOINT Manual	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Imagery collection-platform literacy: resolution and revisit tradeoffs	11.8	11.8 source title transformed into safe curriculum treatment; original: AI-Assisted Satellite Image Analysis: Object Detection and Chronolocation	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	11.9	11.9 source title transformed into safe curriculum treatment; original: Open-Source Geospatial Intelligence Library	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

18.3.3.5 GEOINT and Imagery Intelligence reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 18.

Lesson topic	Practice lens	Evidence artifact	Safety check
Imagery quality literacy: resolution, temporal fit, and uncertainty	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Lesson topic	Practice lens	Evidence artifact	Safety check
Claim-ledger memory exercise that tracks evidence changes rather than people	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
GEOINT in Counterinsurgency and Strike: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
DoD GEOINT Accreditation and Training: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Imagery collection-platform literacy: resolution and revisit tradeoffs	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

18.3.3.6 GEOINT and Imagery Intelligence annotated source ledger: real titles and local contribution Each source cited by this **Open-Source and Geospatial Intelligence Integrity** module is paired below with its real title and a one-line note on what it contributes to **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

Source	Cited work	Curriculum annotation	Status
[ageint253]	Common European Data Spaces	This is an official European Commission webpage describing the Common European Data Spaces initiative, part of the EU strategy to create interconnected, trustworthy data-sharing environments across strategic sectors. It explains that data spaces let organizations and individuals share data while retaining control, guided by principles of open participation, privacy protection, and fair access rules.	verified source-guide; annotation metadata, not claim verification
[ageint255]	Web of Things (WoT) Architecture 1.1	The W3C Recommendation for Web of Things Architecture 1.1, published in December 2023, defining an abstract architecture for interoperability across diverse Internet of Things platforms. It introduces core concepts including Things described by machine-readable Thing Descriptions, reusable Thing Models, and Consumers that interpret descriptions to interact via Properties, Actions, and Events.	verified source-guide; annotation metadata, not claim verification
[ageint270]	NIST Big Data Interoperability Framework	NIST Special Publication 1500-1 (revised edition by Chang and Grady) establishes foundational terminology and consensus definitions for Big Data through the NIST Big Data Public Working Group. The volume defines Big Data characteristics, taxonomy, and a reference architecture assigning roles to Application Providers, Data Consumers, Data Providers, and System Orchestrators.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint278]	Recommendation of the Council on Public Procurement	The OECD Recommendation of the Council on Public Procurement (OECD/LEGAL/0411), a legal instrument adopted by the OECD Council in 2015 on the proposal of the Public Governance Committee. It frames public procurement as a pillar of strategic governance and service delivery and sets out principles for governments to follow.	verified source-guide; annotation metadata, not claim verification
[ageint279]	Open Contracting Data Standard	The documentation homepage for the Open Contracting Data Standard, version 1.1.5, maintained by the Open Contracting Partnership to support disclosure of government contracting data across the procurement lifecycle. It provides a common data model spanning planning, tender, award, contract, and implementation stages, along with a primer, implementation guidance, technical schemas, and validation tooling.	verified source-guide; annotation metadata, not claim verification
[ageint283]	Recommendation of the Council on Open Government	An OECD legal instrument document reproducing the Recommendation of the Council on Open Government (OECD/LEGAL/0438), adopted on 14 December 2017. It defines open government as a culture of governance promoting transparency, integrity, accountability, and stakeholder participation in support of democracy and inclusive growth.	verified source-guide; annotation metadata, not claim verification
[ageint290]	NIST SP 800-218A: Secure Software Development Practices for Generative AI and Dual-Use Foundation Models	NIST Special Publication 800-218A (July 2024), which augments the Secure Software Development Framework with practices specific to AI model development across the software lifecycle. Produced in response to Executive Order 14110, it addresses AI model producers, developers building on those models, and acquirers of AI systems, and is designed to be used alongside NIST SP 800-218.	verified source-guide; annotation metadata, not claim verification
[ageint291]	Revised 508 Standards and 255 Guidelines	Official documentation from the U.S. Access Board on the Revised 508 Standards and 255 Guidelines for information and communication technology accessibility. It establishes mandatory accessibility requirements for federal agencies and voluntary guidelines for telecommunications manufacturers, covering hardware, software, websites, electronic documents, and support services.	verified source-guide; annotation metadata, not claim verification
[ageint294]	M-25-21: Accelerating Federal Use of AI through Innovation, Governance, and Public Trust	An April 2025 Office of Management and Budget memorandum (M-25-21) directing executive branch agencies on federal use of artificial intelligence. Issued under Executive Order 14179, it instructs agencies to accelerate adoption of AI to improve public services and government efficiency while maintaining safeguards for civil rights, civil liberties, and privacy.	verified source-guide; annotation metadata, not claim verification

[ageint057]	MCRP 2-10B.4 (SECURED) - Marines.mil	MCRP 2-10B.4 in the source guide links to the Marines GEOINT manual, not a reconnaissance manual. The linked PDF is 'Geospatial Intelligence Support to Operations'; verify the intended citation before reuse.	verified source-guide; annotation metadata, not claim verification
[ageint058]	GEOINT Essential Body of Knowledge	The GEOINT Essential Body of Knowledge (Version 2.0, 2019), published by the United States Geospatial Intelligence Foundation (USGIF). First developed in 2014 and revised with community input, it defines the competencies, standards, and learning objectives needed to succeed in the geospatial intelligence discipline.	verified source-guide; annotation metadata, not claim verification
[ageint059]	neonpangolin/geospatial-intelligence-library	A GitHub repository describing itself as a reference toolkit for geolocation and chronolocation in digital investigations. It curates open-source resources organized into categories including satellite imagery, mapping, infrastructure and transport tracking, weather and environmental monitoring, shadow and sun-position tools for time-of-day analysis, crisis and conflict mapping, image forensics, and geocoding utilities.	verified source-guide; annotation metadata, not claim verification
[ageint060]	DoDM 3305.10, "DoD Geospatial Intelligence (GEOINT	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint301]	The IC OSINT Strategy 2024-2026	Official Intelligence Community strategy for open-source intelligence governance, integration, source discovery, data, tools, tradecraft, and workforce priorities.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint302]	National Geospatial-Intelligence Agency About Us	The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 18; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

18.3.4 GEOINT and Imagery Intelligence governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 18.

18.3.5 GEOINT and Imagery Intelligence analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 11's governance-boundary section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Open-Source and Geospatial Intelligence Integrity** for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. [ageint253]; [ageint255].

Curriculum topic spine: Imagery quality literacy: resolution, temporal fit, and uncertainty, **GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, **Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. **Recorded source cluster; inspection and scope limits apply:** [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]; [National Geospatial-Intelligence Agency, 2026a]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015].

Conceptual depth: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests.

Method stack: source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration.

Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable.

Known failure modes: privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability.

Defensive boundary: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting. Applied to **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

Anchor	Why it matters here
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Department of State, 2024]	Official strategy source for lawful OSINT governance, discovery, validation, and dissemination. Checked as of 2026-05-21; role: curriculum_anchor.
[International Organization for Standardization, 2013]	International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026b]	Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026a]	Official NGA source on GEOINT AI, data quality, model performance, interoperability, analyst interaction, and standards leadership. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.

18.3.5.1 GEOINT and Imagery Intelligence evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Open-Source and Geospatial Intelligence Integrity** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint253]; [ageint255].

18.3.6 GEOINT and Imagery Intelligence agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 18.

AGEINT translation is bounded by the **Open-Source and Geospatial Intelligence Integrity** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.6.1 GEOINT and Imagery Intelligence permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 18.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.6.2 GEOINT and Imagery Intelligence excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint253]; [ageint255] and **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

18.3.7 GEOINT and Imagery Intelligence governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 18.

Governance is practiced as a gate on the **Open-Source and Geospatial Intelligence Integrity** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.7.1 GEOINT and Imagery Intelligence governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint253]; [ageint255].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Open-Source and Geospatial Intelligence Integrity** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

18.3.7.2 GEOINT and Imagery Intelligence evidence package handoff: appendices, records, and reuse

Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.7.3 GEOINT and Imagery Intelligence current-source assurance: verified anchors and local artifact fit

The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. [ageint253]; [ageint255].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_ic_osint_strategy` for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
What does the module inherit from `official_state_osint_strategy` for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**?	Open Source Intelligence Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official strategy source for lawful OSINT governance, discovery, validation, and dissemination.
What does the module inherit from `official_iso_19157_data_quality` for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**?	ISO 19157:2013 Geographic Information - Data Quality; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing.
What does the module inherit from `official_nga_strategy` for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**?	NGA Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 18; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

18.3.8 GEOINT and Imagery Intelligence assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 18.

18.3.9 GEOINT and Imagery Intelligence assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 18.

18.3.9.1 GEOINT and Imagery Intelligence capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** and [ageint253]; [ageint255].

18.3.9.2 GEOINT and Imagery Intelligence instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** and [ageint253]; [ageint255].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

18.3.9.3 GEOINT and Imagery Intelligence assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Imagery quality literacy: resolution, temporal fit, and uncertainty; **GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**; **Commercial Platforms and Public Programmes: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
Claim-ledger memory exercise that tracks evidence changes rather than people; **GEOINT in Counterinsurgency and Strike: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**; **DoD GEOINT Accreditation and Training: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
MCRP 2-10B 4: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples; **Imagery collection-platform literacy: resolution and revisit tradeoffs**; **Open-Source Geospatial Intelligence Library: GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

18.3.10 GEOINT and Imagery Intelligence refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint253]; [ageint255] and **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**.

18.3.10.1 GEOINT and Imagery Intelligence refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. The local signals begin with [ageint253]; [ageint255].

18.3.10.2 GEOINT and Imagery Intelligence claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**, and the source spine for these checks begins with [ageint253]; [ageint255].

18.3.11 GEOINT and Imagery Intelligence reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint253]; [ageint255].
Contextual source routes. For module 11's review-checklist section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples**. [ageint253]; [ageint255].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

18.3.12 GEOINT and Imagery Intelligence learning-path links: module map, overview, and curriculum atlas

Use the cross-links below to place **Imagery quality literacy: resolution, temporal fit, and uncertainty; GEOINT data-quality audit using provided imagery metadata and non-sensitive synthetic change examples** in the wider unit: the orientation sets the frame, the parent unit supplies the shared safety posture, and the neighbouring modules show what evidence enters and leaves. Lead sources: [ageint253]; [ageint255].
Section 2, Section 15, Section 17, Section 19

19 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS

19.1 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 19.

19.1.1 defensive cyber intelligence normalization discipline spine: domain question and learning focus

Navigation. Parent section: Section 19.
This unit teaches **defensive cyber intelligence normalization**. Technical intelligence lessons normalize incidents, indicators, TTPs, supply-chain evidence, and sharing rules for defense and assurance.

19.1.2 defensive cyber intelligence normalization source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 19.
Use MITRE, NIST, CISA, STIX, and TAXII anchors for defensive taxonomy, secure development, sharing, and incident learning.

19.1.3 defensive cyber intelligence normalization practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 19.
The recurring practice artifact is a **defensive CTI evidence packet** that draws on indicator context, TTP mapping, handling rule, and remediation owner. The unit keeps its learning spine explicit. Classroom packet: fabricated alerts A and B share one event ID, alert C has the same file digest on a clean training image, and a process excerpt lacks command context. Supplied taxonomy excerpts and a class-only sharing card complete the packet.

1. Normalize event IDs, timestamps, assets, and indicator types; merge A and B as one sighting.
2. Compare the observed behavior with technique descriptions and mark any mapping whose required behavior is absent as tentative.
3. Use C as the benign-match control: digest equality alone cannot establish maliciousness.
4. Produce a defensive CTI packet with one deduplicated alert event, a nonspecific digest, a tentative technique mapping, and an unresolved cause. A taxonomy match is not actor attribution. Hand the missing process context to the tabletop incident reviewer with the sharing restriction. Stop before scanning, executing samples, changing systems, or naming an actor.

19.1.4 defensive cyber intelligence normalization safety boundary: accountable, synthetic, and evidence-bounded limits

No exploit, persistence, evasion, scanning, or production response instructions.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint258]; [ageint261].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint258]; [ageint261].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint258]; [ageint261].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint258]; [ageint261].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Governed Intelligence Cycle and Dissemination Architecture. Core anchors: [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2015]; [Office of the Director of National Intelligence, 2026c]. Conceptual focus: treating the intelligence cycle as a governed information system whose collection, processing, analysis, dissemination, evaluation, marking, and records obligations stay explicit. Composability contract: requirements, data provenance, analytic judgments, markings, dissemination permissions, records obligations, and feedback remain separable artifacts. **Practice lens:** Dissemination-and-Marking Control Lens; Which audience, release authority, marking vocabulary, records duty, and feedback loop governs this intelligence artifact? [ageint258]; [ageint261].

19.1.5 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 52 and Figure 53 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 18, Section 20.

19.1.6 TECHNICAL INTELLIGENCE AND CYBER OPERATIONS module roster and source-lane inventory: citations, lanes, and learner route

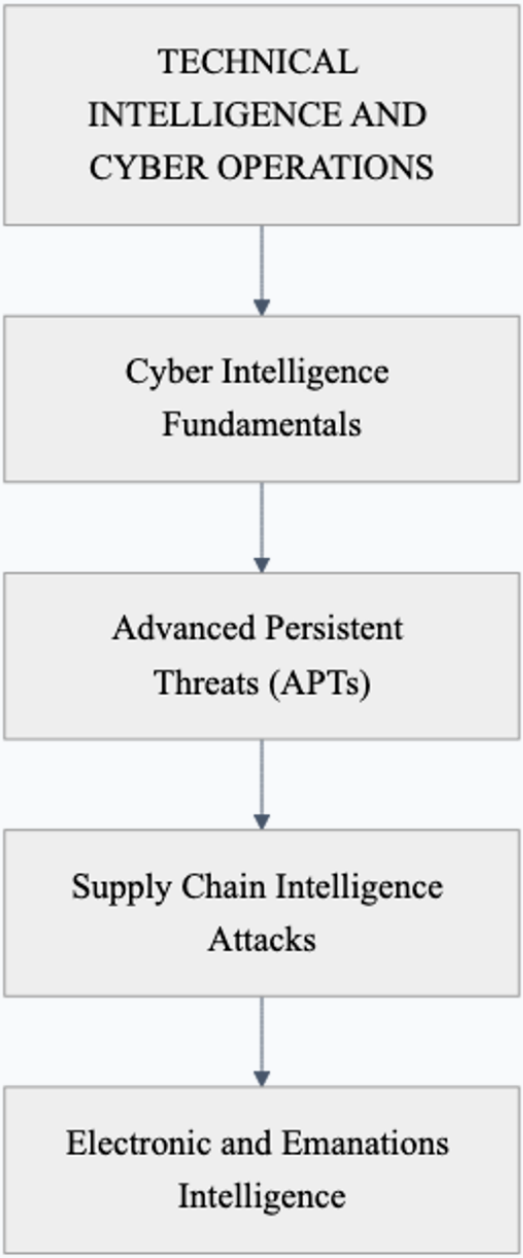

Figure 52: The TECHNICAL INTELLIGENCE AND CYBER OPERATIONS module map traces the part's chapters as a linear reading sequence. It is anchored to the technical intelligence and cyber operations section; use it to inspect 4 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

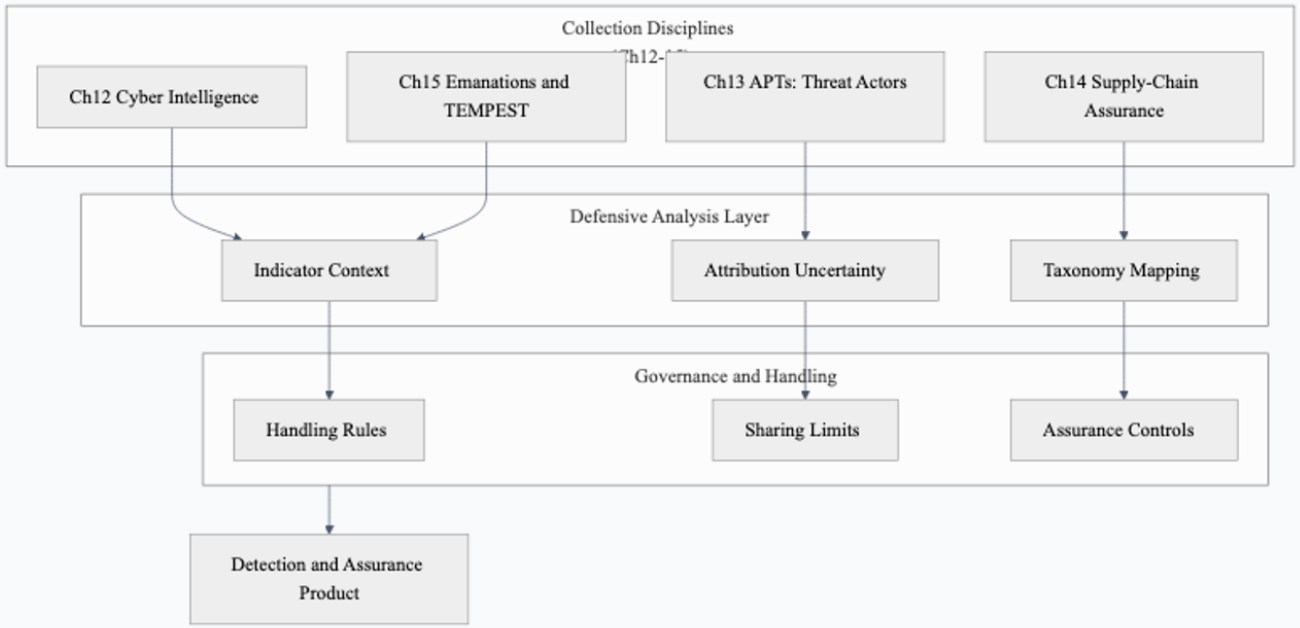

Figure 53: Each technical-collection discipline in this Part feeds a shared defensive pipeline that turns raw signals into governed detection, attribution, and assurance products. Its reader value is to make Collection Disciplines (Ch12-15), Ch12 Cyber Intelligence, Ch13 APTs: Threat Actors, and Ch14 Supply-Chain Assurance visible at a glance, with the technical intelligence and cyber operations section as the source section and defensive review as the boundary.

Module	Section reference	Source spine
Cyber Intelligence Fundamentals	Section 20	[ageint258]; [ageint261]; [ageint266]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint061]; [ageint062]; [ageint063]; [ageint064]; [ageint065]; [ageint300]; [ageint303]; [ageint304]; [ageint066]; [ageint067]; [ageint068]; [ageint069]; [ageint009]; [ageint070]; [ageint071].
Advanced Persistent Threats (APTs)	Section 21	[ageint237]; [ageint258]; [ageint261]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint072]; [ageint069]; [ageint071]; [ageint300]; [ageint303]; [ageint304]; [ageint309]; [ageint310].
Supply Chain Intelligence Attacks	Section 22	[ageint258]; [ageint266]; [ageint268]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint073]; [ageint074]; [ageint075]; [ageint076]; [Hahn et al., 2026]; [ageint297]; [ageint298]; [ageint300]; [ageint304]; [ageint306].
Electronic and Emanations Intelligence	Section 23	[ageint255]; [ageint256]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint078]; [ageint300]; [ageint303]; [ageint304]; [ageint305]; [ageint302]; [ageint297].

20 Cyber Intelligence Fundamentals

20.0.1 Cyber Intelligence Fundamentals figures and course links: visual evidence, source flow, and navigation

The module uses Figure 54 and Figure 52 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 19, Section 21.
This module teaches the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane through a bounded, source-backed coursebook chapter. [ageint258]; [ageint261].

20.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Cyber Intelligence Fundamentals: source context, topic focus, and reader task

Navigation. Parent section: Section 20.

20.1.1 Cyber Intelligence Fundamentals orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 20.

20.1.2 Cyber Intelligence Fundamentals conceptual primer: source context, core model, and reader task

This chapter teaches cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The chapter uses **Defensive Cyber-Intelligence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.
The central distinction is to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. Core topics include **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts; Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint258]; [ageint261].
Learners move from vocabulary and the **Defensive Cyber-Intelligence Lens** distinction through topic lessons on **Cyber defensive taxonomy mapping using published labels and fabricated alerts** with evidence and misconception checks, then assemble a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** with safety and rights gates.

20.1.3 Cyber Intelligence Fundamentals learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 20.

- Connect **Cyber defensive taxonomy mapping using published labels and fabricated alerts and MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts** to **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions.

20.1.4 Cyber Intelligence Fundamentals core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 20.

Term	Working definition
Indicator	an observable signal that may support defensive detection or investigation
TTP	a tactic, technique, or procedure used for defensive behavioral description; a taxonomy match is neither a unique actor signature nor attribution
Sighting	a bounded observation of a possible indicator in a given context
Handling rule	a sharing, marking, or retention limit for threat information
Lessons learned	the post-incident evidence that changes controls or playbooks

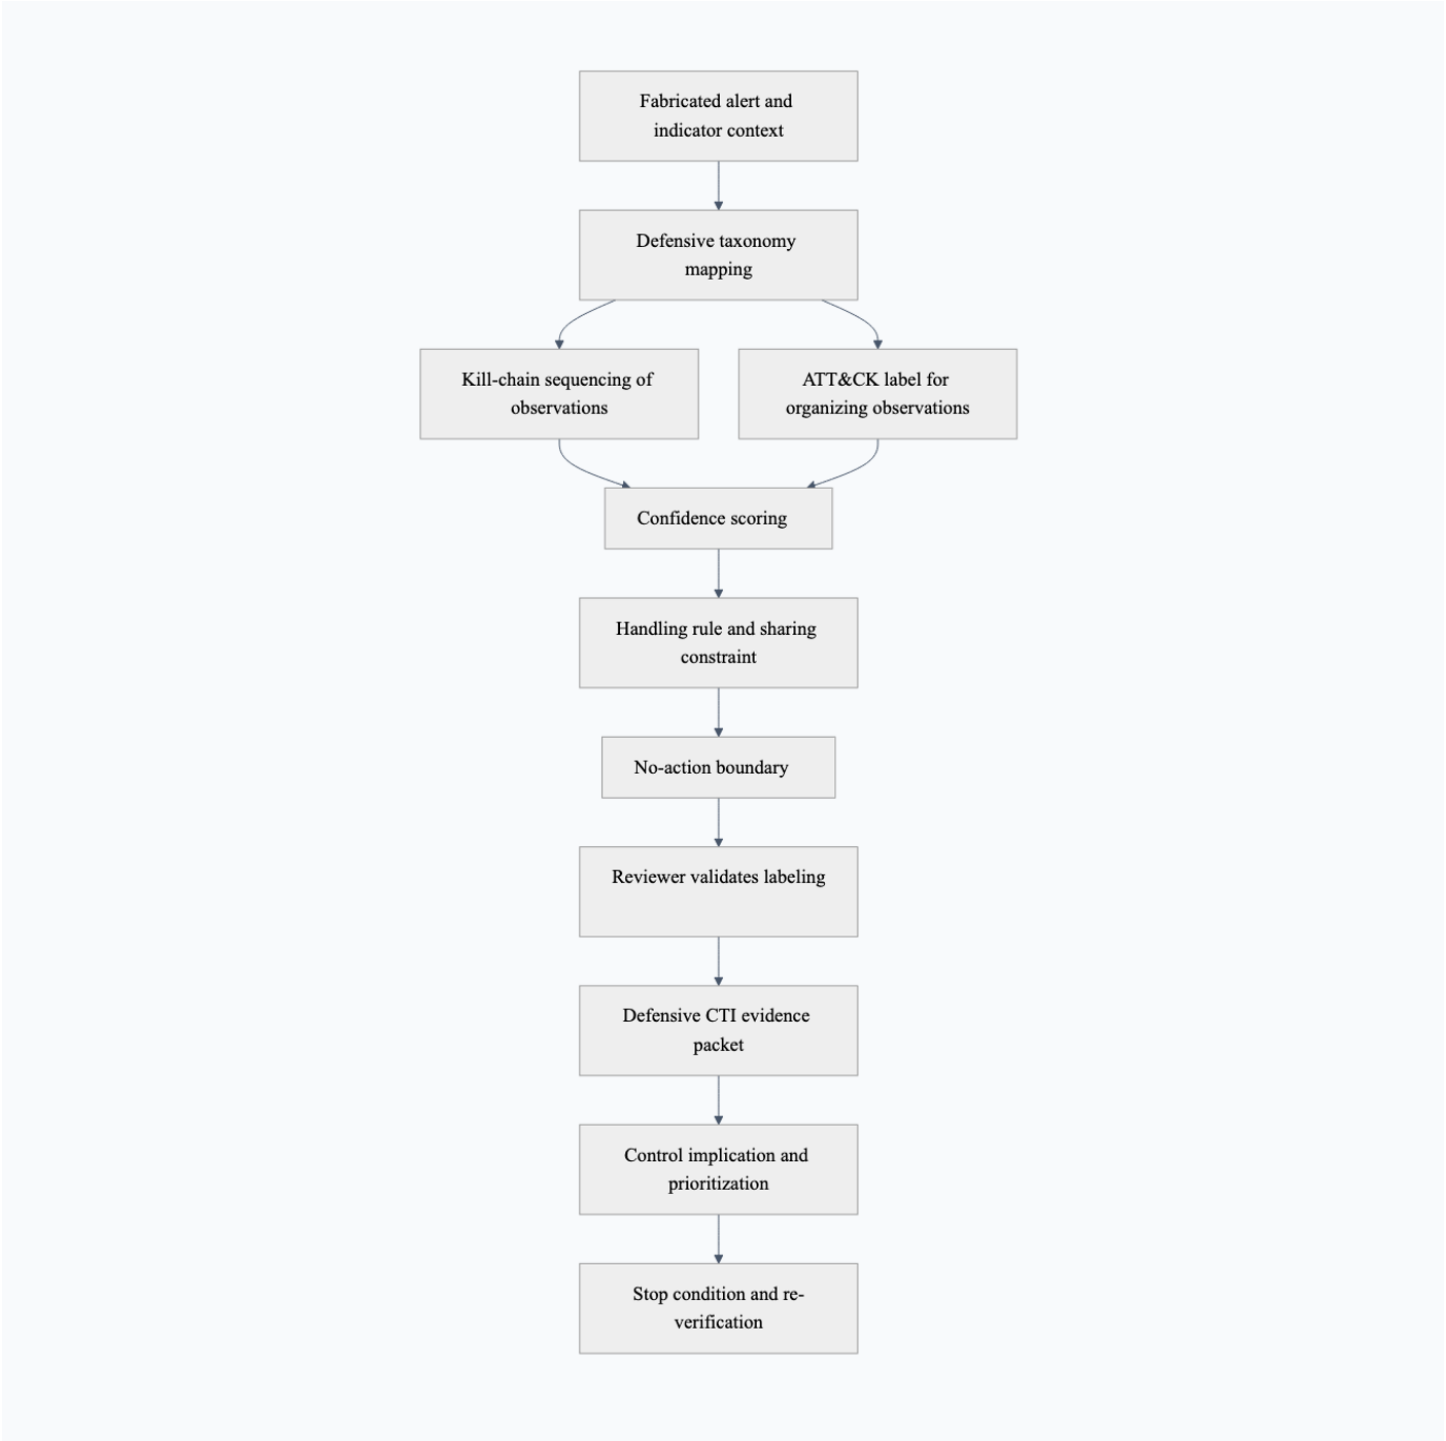

Figure 54: How fabricated alerts and published taxonomies are normalized into a defensive intelligence packet with confidence and control implications, never an action sequence. In the technical intelligence and cyber operations / cyber intelligence fundamentals section, it lets readers compare Fabricated alert and indicator context, Defensive taxonomy mapping, Kill-chain sequencing of observations, and ATT&CK label for organizing observations so the visual functions as a traceable course aid rather than an unscoped assertion.

20.2 Defensive Cyber-Intelligence Lens path for Cyber Intelligence Fundamentals: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 20.

20.2.1 Cyber Intelligence Fundamentals practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 20.

20.2.2 Cyber Intelligence Fundamentals topic lessons: source-backed concepts and transfer tasks

Cyber Intelligence Fundamentals builds cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The sequence opens with **Cyber defensive taxonomy mapping using published labels and fabricated alerts**, **MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**, **Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts** and applies the **Defensive Cyber-Intelligence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 52; module overview Section 20; curriculum atlas Section 2.

Contextual source routes. For module 12's topic-lessons section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

20.2.2.1 Lesson 1: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. The Cyber Kill Chain is a lifecycle model for organizing a hypothesized intrusion, not a law requiring every event to occur in a visible linear sequence [ageint061]. A missing phase can mean missing telemetry, an inapplicable model or no intrusion; it is not permission to invent a bridging event. Separate observed record order, inferred causal order and the model's teaching sequence.

Why it matters. Analysts use **Cyber defensive taxonomy mapping** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that treating defensive taxonomy labels as an action sequence would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint061] and [ageint062]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Cyber defensive taxonomy mapping**, inspect the original passages. Curriculum annotation for [ageint061]: This Lockheed Martin webpage describes the Cyber Kill Chain framework, a methodology for identifying and preventing cyber intrusions as part of the company's Intelligence Driven Defense model. It outlines the sequence of steps an adversary must complete to achieve an objective, and is intended to help analysts understand attacker tactics and procedures. Curriculum annotation for [ageint062]: A Wikipedia article describing the cyber kill chain, a framework adapted by Lockheed Martin from a military concept to model how cyberattacks progress through distinct phases. It outlines seven stages from reconnaissance through actions on objectives, along with defensive countermeasures organizations can apply at each stage. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cyber defensive taxonomy mapping**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Cyber defensive taxonomy mapping using**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Cyber defensive taxonomy mapping** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Transfer **Cyber defensive taxonomy mapping** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.2 Lesson 2: MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. ATT&CK organizes adversary objectives and reported behaviours, not sequential stages; a mapping classifies a supported behaviour and does not confirm an incident, attribute an actor or prove a control works [ageint063, ageint064]. The raw v19 heading is inherited provenance, not a pin for mutable URLs: require a supplied release and entry before accepting any release-specific labels or counts. In a fictional timeline, records at 09:00 and 09:20 both show inventory enumeration, separated by a 09:10 authorized administrative process start; repeated behaviour does not imply passage through intervening tactics or completion of a lifecycle. Candidate discovery/execution labels remain hypotheses pending discriminating fields and release definitions; actor, intrusion status and detection effectiveness are unknown. Missing or ambiguous mappings stay unknown rather than filling a checklist.

Why it matters. Without explicit treatment of **MITRE ATT&CK Framework**, treating defensive taxonomy labels as an action sequence undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint063] and [ageint064]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **MITRE ATT&CK Framework**, inspect the original passages. Curriculum annotation for [ageint063]: The official MITRE ATT&CK Enterprise Matrix is a versioned knowledge base of tactics and techniques. Tactics describe adversary objectives, not mandatory sequential phases; technique matches alone do not establish an actor, attack progression, detection effectiveness or defensive coverage. The live page inspected on 2026-11-06 identifies version 20 and links https://attack.mitre.org/versions/v20/matrices/enterprise/. Curriculum annotation for [ageint064]: MITRE ATT&CK is a globally accessible knowledge base that catalogs adversary tactics and techniques drawn from real-world observations of cyber intrusions. The framework is organized into matrices covering Enterprise, Mobile, and Industrial Control Systems environments, with tactics representing adversary objectives and techniques describing specific methods used to achieve them. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **MITRE ATT&CK Framework**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **MITRE ATT&CK Framework**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **MITRE ATT&CK Framework** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Transfer **MITRE ATT&CK Framework** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.3 Lesson 3: Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Reconnaissance concerns information gathering, whereas resource development concerns preparing resources; neither follows from a record merely mentioning an external address. In a fictional offline log, 'lookup requested, result unavailable' supports a lookup event, not adversarial preparation or ownership of the address. Preserve that distinction without collecting additional information about a real service.

Why it matters. Analysts use **Reconnaissance through Resource Development** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that treating defensive taxonomy labels as an action sequence would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint063]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Reconnaissance through Resource Development**, inspect the original passages. Curriculum annotation for [ageint063]: The official MITRE ATT&CK Enterprise Matrix is a versioned knowledge base of tactics and techniques. Tactics describe adversary objectives, not mandatory sequential phases; technique matches alone do not establish an actor, attack progression, detection effectiveness or defensive coverage. The live page inspected on 2026-11-06 identifies version 20 and links https://attack.mitre.org/versions/v20/matrices/enterprise/. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Reconnaissance through Resource Development**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Reconnaissance through Resource Development**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Reconnaissance through Resource Development** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Apply this module's safe boundary for **Reconnaissance through Resource Development** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

20.2.2.4 Lesson 4: Cyber access-and-execution taxonomy review using fabricated alerts

Concept. Cyber access-and-execution taxonomy review using fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Access, execution, retained access and increased privilege are different propositions requiring different observations. A supplied process-start record can establish that a process was recorded without establishing its entry route, persistent configuration or privilege change. For every candidate technique, retain the exact record field and release-specific definition that discriminate it from routine administration [ageint065].

Why it matters. Cyber access-and-execution taxonomy review matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; treating defensive taxonomy labels as an action sequence is a common failure.

Source support. Inherited source-guide context for **Cyber access-and-execution taxonomy review using fabricated alerts**: [ageint065]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Cyber access-and-execution taxonomy review**, inspect the original passages. Curriculum annotation for [ageint065]: The Enterprise Techniques page of the MITRE ATT&CK framework, a cybersecurity knowledge base maintained by MITRE Corporation. It documents 222 enterprise techniques and 475 sub-techniques describing how adversaries achieve tactical goals across the attack lifecycle, organized by tactics such as initial access, persistence, privilege escalation, defense evasion, credential access, discovery, and impact. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cyber access-and-execution taxonomy review**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Cyber access-and-execution taxonomy review using**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Cyber access-and-execution taxonomy review** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Cyber access-and-execution taxonomy review**: that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Apply this module's safe boundary for **Cyber access-and-execution taxonomy review** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

20.2.2.5 Lesson 5: Cyber credential-and-movement taxonomy review using fabricated alerts

Concept. Cyber credential-and-movement taxonomy review using fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. These inherited tactic labels must be checked against the supplied ATT&CK release rather than treated as an immutable list. Discovery of a resource, access to credentials and movement between systems are not interchangeable, and a failed authentication does not establish any of them by itself. ATLAS addresses AI-system threats while the NIST supply-chain and SSDF references address software assurance; those sources do not substantiate a specific Enterprise ATT&CK mapping, so an ungrounded mapping remains unsupported.

Why it matters. Cyber credential-and-movement taxonomy review connects classroom vocabulary to Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Cyber credential-and-movement taxonomy review using fabricated alerts**: [ageint300], [ageint303], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Cyber credential-and-movement taxonomy review**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cyber credential-and-movement taxonomy review**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Cyber credential-and-movement taxonomy review using**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Cyber credential-and-movement taxonomy review** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Cyber credential-and-movement taxonomy review**: that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Transfer **Cyber credential-and-movement taxonomy review** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.6 Lesson 6: Cyber command, data-loss, and impact taxonomy review using fabricated alerts

Concept. Cyber command, data-loss, and impact taxonomy review using fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Distinguish assembling data, communicating control, transferring data beyond an authorized boundary and changing system availability or integrity. A supplied byte-count increase alone does not establish what moved, why, or whether an authorized boundary was crossed. Routine backup and missing sensor coverage are discriminating alternatives; retain unknown content and intent rather than completing a narrative from taxonomy labels.

Why it matters. Analysts use **Cyber command, data-loss, and impact taxonomy review using fabricated alerts** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that treating defensive taxonomy labels as an action sequence would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Cyber command, data-loss, and impact taxonomy review using fabricated alerts**: [ageint062] and [ageint063]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Cyber command, data-loss, and impact taxonomy review using fabricated alerts**, inspect the original passages. Curriculum annotation for [ageint062]: A Wikipedia article describing the cyber kill chain, a framework adapted by Lockheed Martin from a military concept to model how cyberattacks progress through distinct phases. It outlines seven stages from reconnaissance through actions on objectives, along with defensive countermeasures organizations can apply at each stage. Curriculum annotation for [ageint063]: The official MITRE ATT&CK Enterprise Matrix is a versioned knowledge base of tactics and techniques. Tactics describe adversary objectives, not mandatory sequential phases; technique matches alone do not establish an actor, attack progression, detection effectiveness or defensive coverage. The live page inspected on 2026-11-06 identifies version 20 and links https://attack.mitre.org/versions/v20/matrices/enterprise/. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cyber command, data-loss, and impact taxonomy review using fabricated alerts**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Cyber command data-loss and impact**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape the same topic work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Cyber command, data-loss, and impact taxonomy review using fabricated alerts**: that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Apply this module's safe boundary for **Cyber command, data-loss, and impact taxonomy review using fabricated alerts** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

20.2.2.7 Lesson 7: Unified Kill Chain: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. Unified Kill Chain: Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the model as defensive vocabulary for sequencing observations, not as a checklist of adversary actions.

Worked reasoning and limits. The Unified Kill Chain is another modelling lens, not a merger that makes all phases empirically inevitable. Contrast models by whether they expose different missing observations in the same supplied timeline, not by which yields more labels. The inherited encyclopedia reference is secondary orientation and cannot establish a model's predictive validity, incident-specific causation or optimal intervention point.

Why it matters. Without explicit treatment of **Unified Kill Chain**, treating defensive taxonomy labels as an action sequence undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **Unified Kill Chain: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint062]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Unified Kill Chain**, inspect the original passages. Curriculum annotation for [ageint062]: A Wikipedia article describing the cyber kill chain, a framework adapted by Lockheed Martin from a military concept to model how cyberattacks progress through distinct phases. It outlines seven stages from reconnaissance through actions on objectives, along with defensive countermeasures organizations can apply at each stage.

These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Unified Kill Chain**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Unified Kill Chain**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Unified Kill Chain** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a defensive taxonomy is an instruction sequence.

Transfer task. Transfer **Unified Kill Chain** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.8 Lesson 8: Threat Intelligence Sharing: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. Threat Intelligence Sharing: Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. STIX represents observations, indicators, sightings and relationships as distinct assertions; TAXII transports content but neither verifies truth nor authorizes distribution, and TAXII 2.1 specifies Collections while reserving Channels without specifying their services [ageint067, ageint068, ageint310]. In a completed fictional packet, O1 observes artifact H at 09:00, indicator I1 version 1 at 10:00 asserts H is suspicious from source S1, sighting Sg1 at 10:05 references that assertion, O2 copies O1, and relation R1 names an actor without evidence; deduplication leaves one observation lineage, a sourced suspicion and an unsupported actor edge, not three confirmations. I1 version 2 at 11:00 is supplied as revoked, so the historical assertion remains in the record but cannot silently serve as an active indicator; its confidence rationale was a single-source judgment, not an incident probability. A supplied classroom handling card permits course group G only: a proposed export to group H is rejected even if serialization is valid, while no live TAXII transaction occurs. Copying O1 must not raise corroboration, withdrawing S1 removes the suspicion's support, and a protocol success changes neither attribution nor the right to share.

Why it matters. Analysts use **Threat Intelligence Sharing** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that treating defensive taxonomy labels as an action sequence would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Threat Intelligence Sharing: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint066], [ageint067], and [ageint068]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Threat Intelligence Sharing**, inspect the original passages. Curriculum annotation for [ageint066]: A Cloudflare Learning Center explainer describing STIX and TAXII as complementary standards for cyber threat intelligence. STIX defines a structured language for representing threat information, while TAXII specifies how that information is transported and exchanged between systems. Together they form a framework that lets organizations share and consume threat intelligence in a consistent, machine-readable way to improve collective defense. Curriculum annotation for [ageint067]: An introductory page from the OASIS CTI documentation explaining STIX (Structured Threat Information Expression), an open-source language and serialization format used to exchange cyber threat intelligence. It describes how STIX 2.1 models intelligence using 18 domain objects (such as attack patterns, malware, threat actors, and vulnerabilities) and 2 relationship objects, all represented as JSON. Curriculum annotation for [ageint068]: The official committee page for the OASIS Cyber Threat Intelligence (CTI) Technical Committee, a standards body that develops formats for sharing cyber threat intelligence. It maintains the STIX (Structured Threat Information Expression) data model and the TAXII exchange protocol, both approved as OASIS standards in 2021, and organizes subcommittees for STIX, TAXII, and interoperability. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Threat Intelligence Sharing**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Threat Intelligence Sharing**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Threat Intelligence Sharing** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Transfer **Threat Intelligence Sharing** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.9 Lesson 9: Nation-State Cyber Espionage: Cyber defensive taxonomy mapping using published labels and fabricated alerts

Concept. Nation-State Cyber Espionage: Cyber defensive taxonomy mapping using published labels and fabricated alerts uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Espionage, disruption and financial gain are candidate objectives, not directly observed motives inferred from a tool name or victim sector. A study of a selected incident corpus cannot automatically establish base rates for all state activity or classify an unseen event. Without inspected methods, sampling and attribution criteria, this lesson leaves numerical prevalence and individual-event sponsorship unknown rather than generalizing the inherited study reference.

Why it matters. Nation-State Cyber Espionage matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; treating defensive taxonomy labels as an action sequence is a common failure.

Source support. Inherited source-guide context for **Nation-State Cyber Espionage: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint069]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Nation-State Cyber Espionage**, inspect the original passages. No displayable curriculum annotation is available for [ageint069]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Nation-State Cyber Espionage**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Nation-State Cyber Espionage**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Nation-State Cyber Espionage** work as a **defensive CTI evidence packet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Transfer **Nation-State Cyber Espionage** from this module to a second motif by preserving defensive CTI normalization and

tabletop incident learning, replacing action with audit, and naming the blocked use.

20.2.2.10 Lesson 10: Chinese State-Affiliated Hacking: Cyber defensive taxonomy mapping using published labels and fabricated alerts **Concept. Chinese State-Affiliated Hacking: Cyber defensive taxonomy mapping using published labels and fabricated alerts** uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Treat these names as labels used in attributed reporting, not a single actor or a conclusion established by a shared technique. The inherited 2016 student paper concerns earlier China-related espionage and cannot substantiate later Volt Typhoon reporting or all three named clusters [ageint070]. Without a dated primary attribution statement tied to each claim, affiliation and alias equivalence remain unsupported here; no live actor or infrastructure investigation is performed.

Why it matters. Chinese State-Affiliated Hacking matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; treating defensive taxonomy labels as an action sequence is a common failure.

Source support. Inherited source-guide context for **Chinese State-Affiliated Hacking: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint009] and [ageint070]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Chinese State-Affiliated Hacking**, inspect the original passages. Curriculum annotation for [ageint009]: A November 2023 report from MERICS (Mercator Institute for China Studies) analyzing Chinese state-affiliated cyber intrusions aimed at strategic goals. It argues that Chinese actors pursue long-term, persistent access to European technology firms and critical infrastructure for espionage rather than disruption, with targeting aligned to government priorities such as semiconductors, pharmaceuticals, and advanced manufacturing. Curriculum annotation for [ageint070]: A 2016 student security paper by Winnona DeSombre (Tufts Comp116) analyzing the evolution of China's cyber espionage campaigns against the United States. Organized in three parts, it surveys China-US relations in the cyber domain and the policy dilemmas of attribution and shared terminology, presents a case study of the APT1 hacker group linked to PLA Unit 61398, and reviews broader trends in the context of the 2015 US-China Cyber Agreement. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Chinese State-Affiliated Hacking**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Chinese State-Affiliated Hacking**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Chinese State-Affiliated Hacking** work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Apply this module's safe boundary for **Chinese State-Affiliated Hacking** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

20.2.2.11 Lesson 11: Russian Cyber Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts **Concept. Russian Cyber Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts** uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Vendor cluster names, government attribution statements and organizational identities are different objects and may not have one-to-one alias relationships. The attached ATLAS, supply-chain and SSDF references do not establish the named groups' Russian affiliations or incident histories; those specific assertions remain unsupported without appropriate dated reporting. A tool or behaviour overlap is a reason to compare hypotheses, not to assign nationality or merge clusters.

Why it matters. Russian Cyber Operations matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; treating defensive taxonomy labels as an action sequence is a common failure.

Source support. Inherited source-guide context for **Russian Cyber Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint300], [ageint303], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Russian Cyber Operations**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Russian Cyber Operations**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Russian Cyber Operations**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Russian Cyber Operations** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Reuse the **Russian Cyber Operations** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

20.2.2.12 Lesson 12: Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts **Concept. Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts** studies APT reporting as attribution and confidence literacy: technical similarity, context, caveats, and geopolitical inference stay separate.

Worked reasoning and limits. Living-off-the-land describes misuse of legitimate capabilities, so the presence of an administrative utility is not itself evidence of malicious conduct. Distinguish the observed invocation, authorized task context and claimed objective using supplied inert records; absent context leaves intent unresolved. The Reddit AMA interest-check is not an authoritative LOTL specification or validated detection method,

and this lesson gives no commands, evasion instructions or operational response.

Why it matters. Analysts use **Living-Off-The-Land Techniques in APT Operations** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that treating defensive taxonomy labels as an action sequence would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts**: [ageint071]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Living-Off-The-Land Techniques in APT Operations**, inspect the original passages. Curriculum annotation for [ageint071]: Attribution becomes harder when its open-source … These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Living-Off-The-Land Techniques in APT Operations**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Living-Off-The-Land Techniques in APT Operations**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Living-Off-The-Land Techniques in APT Operations** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Reuse the **Living-Off-The-Land Techniques in APT Operations** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

20.2.3 Cyber Intelligence Fundamentals worked safe example: synthetic inputs, evidence, and review

Worked example: a sample campus SOC reviews fabricated alert records after a tabletop incident. [ageint258]; [ageint261].

Contextual source routes. For module 12's worked-example section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **defensive cyber intelligence normalization**. Learners use a **defensive CTI evidence packet** and keep this boundary visible: No exploit, persistence, evasion, scanning, or production response instructions.

Frame. The classroom question centers on **Cyber defensive taxonomy mapping using published labels and fabricated alerts**. Excluded actions stay explicit, and the **Defensive Cyber-Intelligence Lens** planning question is: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?

Inputs. For the **Cyber defensive taxonomy mapping using published labels and fabricated alerts** scenario, use fabricated alerts A and B sharing one event ID, clean-image control C with the same digest, a process excerpt lacking command context, taxonomy descriptions, and a class-only sharing card. The Defensive Cyber-Intelligence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Cyber defensive taxonomy mapping using published labels and fabricated alerts**, students first normalize timestamps, assets, event IDs, and indicator types; then merge A and B and compare the observed behavior with the taxonomy's requirements; use C to reject digest equality as sufficient evidence of maliciousness. Mark incomplete behavior mappings tentative and stop actor attribution or production response; hand the missing process context to the tabletop reviewer under the sharing restriction. Pause whenever an inference about Cyber defensive taxonomy mapping using published labels and fabricated alerts appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a CTI packet with one deduplicated A/B event, the separate benign control, a nonspecific digest, a tentative behavior mapping, unresolved cause and actor, and a named review owner; neither an indicator hit nor an ATT&CK label proves compromise or identifies a campaign Retain it as the **defensive CTI evidence packet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Cyber defensive taxonomy mapping using published labels and fabricated alerts** as "Defensive Cyber-Intelligence Lens confirms it" is not enough. The revision ties the claim to defensive CTI normalization and tabletop incident learning, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Cyber defensive taxonomy mapping using published labels and fabricated alerts** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

20.2.4 Cyber Intelligence Fundamentals practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Defensive Cyber-Intelligence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

Contextual source routes. For module 12's practice-sequence section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Cyber defensive taxonomy mapping using published labels and fabricated alerts, MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts, Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane.
2. Frame	Answer the lens question: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Cyber defensive taxonomy mapping using published labels and fabricated alerts: defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the defensive CTI evidence packet fields for Cyber defensive taxonomy mapping using published labels and fabricated alerts.	Unit profile note.	Evidence artifacts include indicator context, TTP mapping.
4. Challenge	Test the misconception that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.	Failure-mode note.	The artifact applies the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

20.2.4.1 Cyber Intelligence Fundamentals instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. [ageint258]; [ageint261].

20.2.4.2 Cyber Intelligence Fundamentals extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 20.

Have learners swap artifacts and apply the **Defensive Cyber-Intelligence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.2.5 Cyber Intelligence Fundamentals knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 20.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Cyber defensive taxonomy mapping using published labels and fabricated alerts**.
2. Transfer the **Defensive Cyber-Intelligence Lens** artifact from **Cyber defensive taxonomy mapping using published labels and fabricated alerts** to the final topic, **Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which indicator is useful only after context and confidence are added?
5. Correct this misconception: that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

20.2.5.1 Cyber Intelligence Fundamentals answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Cyber defensive taxonomy mapping using published labels and fabricated alerts** without source evidence, uncertainty, or a safe transfer task.

20.3 Cyber Intelligence Fundamentals assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 20.

20.3.1 Cyber Intelligence Fundamentals evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 20.

20.3.2 Cyber Intelligence Fundamentals transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 20.

20.3.2.1 Cyber Intelligence Fundamentals lineage and source tradition: profile, concepts, and first anchors This sits in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lineage: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. [ageint258]; [ageint261].

20.3.2.2 Cyber Intelligence Fundamentals working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 20.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**, with provenance and reviewability throughout.

20.3.2.3 Cyber Intelligence Fundamentals knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** fabricated alerts, public taxonomy labels, incident context, supplier evidence, and handling rules. [ageint258]; [ageint261].
- **Transforms:** indicator normalization, TTP mapping, confidence scoring, sharing review, and control-gap analysis.
- **Outputs:** defensive CTI packet, handling note, control implication, and incident-learning memo.
- **Failure modes:** exploit detail leakage, indicator fixation, unvetted sharing, and unsupported attribution.

20.3.2.4 Cyber Intelligence Fundamentals transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 20.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.
- **Evidence contract:** keep the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as defensive CTI packet, handling note, control implication, and incident-learning memo that another reviewer can audit.

20.3.2.5 Cyber Intelligence Fundamentals profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 20.

The matched profile emphasizes turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. The method stack is threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned; the local topic cluster is **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.3 Cyber Intelligence Fundamentals evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 20.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** profile tells reviewers what evidence is strong enough for the module artifact built around **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.3.1 Cyber Intelligence Fundamentals guide source spine: inherited keys and local citation roles Primary guide citations: [ageint258]; [ageint261]; [ageint266]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint061]; [ageint062]; [ageint063]; [ageint064]; [ageint065]; [ageint300]; [ageint303]; [ageint304]; [ageint066]; [ageint067]; [ageint068]; [ageint069]; [ageint009]; [ageint070]; [ageint071].

20.3.3.2 Cyber Intelligence Fundamentals verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint258]; [ageint261].

Tier	What counts	How it is used
Source guide	[ageint258]; [ageint261]; [ageint266]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint061]; [ageint062]; [ageint063]; [ageint064]; [ageint065]; [ageint300]; [ageint303]; [ageint304]; [ageint066]; [ageint067]; [ageint068]; [ageint069]; [ageint009]; [ageint070]; [ageint071].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 12's source-canon section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts** and [ageint258]; [ageint261], but only directly verified source URLs are encoded as citations.

20.3.3.3 Cyber Intelligence Fundamentals intelligence practice lens: evidence artifact and safety check Practice lens: **Defensive Cyber-Intelligence Lens** for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. [ageint258]; [ageint261].

Planning question: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?

Evidence artifact: defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication.

Validation rule: verify that taxonomy labels are descriptive, indicators are contextualized, incident categories are reviewable, and outputs remain detection or assurance oriented. Applied to **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

Handoff contract: handoff separates observations, taxonomy labels, confidence, sharing limits, and defensive control recommendations.

Safety check: exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions.

20.3.3.4 Cyber Intelligence Fundamentals runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 20.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	12.99	12.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Cyber Intelligence Fundamentals to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Bounded autonomy, procurement, incident-response, and assurance studio	12.101	12.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Cyber Intelligence Fundamentals	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Model-card, recoverability, retention, and learner-support evidence package	12.102	12.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Cyber Intelligence Fundamentals	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

Unified Kill Chain: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Threat Intelligence Sharing: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Nation-State Cyber Espionage: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Chinese State-Affiliated Hacking: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Russian Cyber Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

20.3.3.6 Cyber Intelligence Fundamentals annotated source ledger: real titles and local contribution Each source cited by this **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** module is paired below with its real title and a one-line note on what it contributes to **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

Source	Cited work	Curriculum annotation	Status
[ageint258]	OpenAPI Specification	The official OpenAPI Initiative publications page, serving as a central index for the OpenAPI Specification and related standards including the Arazzo and Overlay specifications. It provides access to multiple specification versions (2.0, 3.0, 3.1, and 3.2) and their corresponding downloadable schemas identified by release date, along with a registry of extensions, formats, media types, and other resources.	verified source-guide; annotation metadata, not claim verification
[ageint261]	RFC 9110: HTTP Semantics	RFC 9110, the official IETF standards document defining the core semantics and architecture of HTTP, published in June 2022 and consolidating nine earlier RFCs. It establishes terminology and protocol aspects shared across HTTP versions, including methods, status codes, header fields, content negotiation, conditional and range requests, authentication, and the http and https URI schemes.	verified source-guide; annotation metadata, not claim verification
[ageint266]	PROV Overview	A W3C Working Group Note from 2013 that provides an overview and roadmap for the PROV family of specifications for representing and exchanging provenance information on the web. It defines provenance as information about the entities, activities, and people involved in producing data, used to assess quality, reliability, and trustworthiness.	verified source-guide; annotation metadata, not claim verification
[ageint280]	NIST SP 800-61 Rev. 3: Incident Response Recommendations and Considerations for Cybersecurity Risk Management	NIST SP 800-61 Rev. 3, published April 2025, integrates incident response guidance into broader cybersecurity risk management aligned with the NIST Cybersecurity Framework 2.0, superseding the 2012 Rev. 2. The publication addresses cyber threat information sharing, incident handling and management practices, and procedures for detecting, responding to, and recovering from security incidents.	verified source-guide; annotation metadata, not claim verification
[ageint281]	Artificial Intelligence Cybersecurity Challenges	An ENISA (European Union Agency for Cybersecurity) report published December 15, 2020 mapping the cybersecurity challenges of artificial intelligence. It defines AI scope through a lifecycle approach, identifies the assets requiring protection within AI ecosystems, and develops a threat taxonomy classified across lifecycle stages and asset categories.	verified source-guide; annotation metadata, not claim verification
[ageint282]	AI Research: Security and Resilience	A NIST page on AI research focused on security and resilience, framing these as core characteristics of trustworthy AI under the NIST AI Risk Management Framework.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint292]	Assessing Risks and Impacts of AI (ARIA): Pilot Evaluation Report	The ARIA 0.1 pilot evaluation report documents NIST's methodology for systematically assessing AI applications for risks and societal impacts, using a multi-layered evaluation approach across five participating organizations and seven submitted AI applications. The pilot employed three evaluation scenarios and three testing levels: model testing, red teaming, and field testing, supplemented by dialogue annotation, tester questionnaires, and structured measurement trees.	verified source-guide; annotation metadata, not claim verification
[ageint295]	M-25-22: Driving Efficient Acquisition of Artificial Intelligence in Government	OMB Memorandum M-25-22 (April 3, 2025), Driving Efficient Acquisition of Artificial Intelligence in Government, issued under Executive Order 13960 and related directives. It provides guidance to federal agencies for acquiring effective and trustworthy AI in a timely, cost-effective manner, and rescinds and replaces earlier memorandum M-24-18.	verified source-guide; annotation metadata, not claim verification
[ageint296]	Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile	NIST AI 600-1, the Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile, a cross-sectoral companion resource to the NIST AI RMF 1.0 issued pursuant to Executive Order 14110. It identifies risks that are unique to or amplified by generative AI and organizes suggested actions for managing those risks, mapped to the AI RMF functions.	verified source-guide; annotation metadata, not claim verification
[ageint061]	Cyber Kill Chain®	This Lockheed Martin webpage describes the Cyber Kill Chain framework, a methodology for identifying and preventing cyber intrusions as part of the company's Intelligence Driven Defense model. It outlines the sequence of steps an adversary must complete to achieve an objective, and is intended to help analysts understand attacker tactics and procedures.	verified source-guide; annotation metadata, not claim verification
[ageint062]	Cyber kill chain	A Wikipedia article describing the cyber kill chain, a framework adapted by Lockheed Martin from a military concept to model how cyberattacks progress through distinct phases. It outlines seven stages from reconnaissance through actions on objectives, along with defensive countermeasures organizations can apply at each stage.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint063]	Enterprise Matrix - MITRE ATT&CK®	The official MITRE ATT&CK Enterprise Matrix is a versioned knowledge base of tactics and techniques. Tactics describe adversary objectives, not mandatory sequential phases; technique matches alone do not establish an actor, attack progression, detection effectiveness or defensive coverage. The live page inspected on 2026-11-06 identifies version 20 and links https://attack.mitre.org/versions/v20/matrices/enterprise/.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint064]	MITRE ATT&CK®	MITRE ATT&CK is a globally accessible knowledge base that catalogs adversary tactics and techniques drawn from real-world observations of cyber intrusions. The framework is organized into matrices covering Enterprise, Mobile, and Industrial Control Systems environments, with tactics representing adversary objectives and techniques describing specific methods used to achieve them.	verified source-guide; annotation metadata, not claim verification
[ageint065]	Enterprise Techniques - MITRE ATT&CK®	The Enterprise Techniques page of the MITRE ATT&CK framework, a cybersecurity knowledge base maintained by MITRE Corporation. It documents 222 enterprise techniques and 475 sub-techniques describing how adversaries achieve tactical goals across the attack lifecycle, organized by tactics such as initial access, persistence, privilege escalation, defense evasion, credential access, discovery, and impact.	verified source-guide; annotation metadata, not claim verification
[ageint300]	MITRE ATLAS	MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy.	original source-guide; annotation metadata, not claim verification
[ageint303]	Software Security in Supply Chains	An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation.	verified source-guide; annotation metadata, not claim verification
[ageint304]	Secure Software Development Framework (SSDF) Version 1.1: Recommendations for Mitigating the Risk of Software Vulnerabilities	NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences.	verified source-guide; annotation metadata, not claim verification
[ageint066]	What is STIX/TAXII? - Cloudflare	A Cloudflare Learning Center explainer describing STIX and TAXII as complementary standards for cyber threat intelligence. STIX defines a structured language for representing threat information, while TAXII specifies how that information is transported and exchanged between systems. Together they form a framework that lets organizations share and consume threat intelligence in a consistent, machine-readable way to improve collective defense.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint067]	Introduction to STIX	An introductory page from the OASIS CTI documentation explaining STIX (Structured Threat Information Expression), an open-source language and serialization format used to exchange cyber threat intelligence. It describes how STIX 2.1 models intelligence using 18 domain objects (such as attack patterns, malware, threat actors, and vulnerabilities) and 2 relationship objects, all represented as JSON.	verified source-guide; annotation metadata, not claim verification
[ageint068]	OASIS Cyber Threat Intelligence (CTI) TC	The official committee page for the OASIS Cyber Threat Intelligence (CTI) Technical Committee, a standards body that develops formats for sharing cyber threat intelligence. It maintains the STIX (Structured Threat Information Expression) data model and the TAXII exchange protocol, both approved as OASIS standards in 2021, and organizes subcommittees for STIX, TAXII, and interoperability.	verified source-guide; annotation metadata, not claim verification
[ageint069]	Assessing nation-state-sponsored cyberattacks using aspects	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint009]	"Here to stay" – Chinese state-affiliated hacking for strategic goals	A November 2023 report from MERICS (Mercator Institute for China Studies) analyzing Chinese state-affiliated cyber intrusions aimed at strategic goals. It argues that Chinese actors pursue long-term, persistent access to European technology firms and critical infrastructure for espionage rather than disruption, with targeting aligned to government priorities such as semiconductors, pharmaceuticals, and advanced manufacturing.	verified source-guide; annotation metadata, not claim verification
[ageint070]	Getting Harder to Catch Analyzing the Evolution of China's Cyber	A 2016 student security paper by Winnona DeSombre (Tufts Comp116) analyzing the evolution of China's cyber espionage campaigns against the United States. Organized in three parts, it surveys China-US relations in the cyber domain and the policy dilemmas of attribution and shared terminology, presents a case study of the APT1 hacker group linked to PLA Unit 61398, and reviews broader trends in the context of the 2015 US-China Cyber Agreement.	verified source-guide; annotation metadata, not claim verification
[ageint071]	I Led IR on Nation-State Attacks at Mandiant, FireEye & CrowdStrike	Attribution becomes harder when its open-source …	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 20; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

20.3.4 Cyber Intelligence Fundamentals governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 20.

20.3.5 Cyber Intelligence Fundamentals analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 12's governance-boundary section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. [ageint258]; [ageint261].

Curriculum topic spine: Cyber defensive taxonomy mapping using published labels and fabricated alerts, **MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**, **Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. **Recorded source cluster; inspection and scope limits apply:** [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]; [Cybersecurity and Infrastructure Security Agency, 2026d]; [National Institute of Standards and Technology, 2025c]; [Organisation for Economic Co-operation and Development, 2025a].

Conceptual depth: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules.

Method stack: threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned.

Composability contract: indicators, TTP mappings, affected assets, supplier evidence, response actions, and sharing constraints remain independently reusable.

Known failure modes: indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow.

Defensive boundary: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions. Applied to **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

Anchor	Why it matters here
[National Institute of Standards and Technology, 2016]	Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2025]	OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2021]	OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED. Checked as of 2026-11-06; role: curriculum_anchor.
[MITRE, 2026b]	Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization. Checked as of 2026-05-21; role: curriculum_anchor.
[Cybersecurity and Infrastructure Security Agency, 2026d]	Official catalog for prioritizing known exploited vulnerabilities as defensive triage inputs, not as exploitation instructions. Checked as of 2026-05-21; role: curriculum_anchor.
[National Institute of Standards and Technology, 2025c]	Official incident-response profile for preparation, detection, response, recovery, and continuous improvement under CSF 2.0. Checked as of 2026-05-21; role: curriculum_anchor.
[Organisation for Economic Co-operation and Development, 2025a]	OECD policy paper proposing a common AI incident reporting framework for jurisdictions and sectors, including criteria for impact and risk characterization. Checked as of 2026-08-30; role: curriculum_anchor.

20.3.5.1 Cyber Intelligence Fundamentals evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint258]; [ageint261].

20.3.6 Cyber Intelligence Fundamentals agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 20.

AGEINT translation is bounded by the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.6.1 Cyber Intelligence Fundamentals permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 20.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.6.2 Cyber Intelligence Fundamentals excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint258]; [ageint261] and **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

20.3.7 Cyber Intelligence Fundamentals governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 20.

Governance is practiced as a gate on the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Learners use the **Defensive Cyber-Intelligence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.7.1 Cyber Intelligence Fundamentals governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint258]; [ageint261].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** failure modes and the **Defensive Cyber-Intelligence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

20.3.7.2 Cyber Intelligence Fundamentals evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Defensive Cyber-Intelligence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.7.3 Cyber Intelligence Fundamentals current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. [ageint258]; [ageint261].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_nist_sp_800_150` for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**?	Guide to Cyber Threat Information Sharing, NIST SP 800-150; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs.
What does the module inherit from `official_oasis_stix_21` for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**?	STIX Version 2.1; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings.
What does the module inherit from `official_oasis_taxii_21` for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**?	TAXII Version 2.1; lane `cyber_threat_intelligence`; checked 2026-11-06.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED.

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_mitre_attack_enterprise` for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**?	MITRE ATT&CK Enterprise Matrix; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 20; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

20.3.8 Cyber Intelligence Fundamentals assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 20.

20.3.9 Cyber Intelligence Fundamentals assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 20.

20.3.9.1 Cyber Intelligence Fundamentals capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.
Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts** and [ageint258]; [ageint261].

20.3.9.2 Cyber Intelligence Fundamentals instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts** and [ageint258]; [ageint261].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

20.3.9.3 Cyber Intelligence Fundamentals assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Cyber defensive taxonomy mapping using published labels and fabricated alerts; **MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; **Reconnaissance through Resource Development: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; **Cyber access-and-execution taxonomy review using fabricated alerts**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: verify that taxonomy labels are descriptive, indicators are contextualized, incident categories are reviewable, and outputs remain detection or assurance oriented.
Cyber credential-and-movement taxonomy review using fabricated alerts; **Cyber command, data-loss, and impact taxonomy review using fabricated alerts**; **Unified Kill Chain: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; **Threat Intelligence Sharing: Cyber defensive taxonomy mapping using published labels and fabricated alerts**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Nation-State Cyber Espionage: Cyber defensive taxonomy mapping using published labels and fabricated alerts; **Chinese State-Affiliated Hacking: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; **Russian Cyber Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts**; **Living-Off-The-Land Techniques in APT Operations: Cyber defensive taxonomy mapping using published labels and fabricated alerts**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

20.3.10 Cyber Intelligence Fundamentals refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint258]; [ageint261] and **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**.

20.3.10.1 Cyber Intelligence Fundamentals refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. The local signals begin with [ageint258]; [ageint261].

20.3.10.2 Cyber Intelligence Fundamentals claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**, and the source spine for these checks begins with [ageint258]; [ageint261].

20.3.11 Cyber Intelligence Fundamentals reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint258]; [ageint261].
Contextual source routes. For module 12's review-checklist section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts**. [ageint258]; [ageint261].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

20.3.12 Cyber Intelligence Fundamentals learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Cyber defensive taxonomy mapping using published labels and fabricated alerts; MITRE ATT&CK Framework: Cyber defensive taxonomy mapping using published labels and fabricated alerts** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint258]; [ageint261].
Section 2, Section 19, Section 21

21 Advanced Persistent Threats (APTs)

21.0.1 Advanced Persistent Threats (APTs) figures and course links: visual evidence, source flow, and navigation

The module uses Figure 55 and Figure 52 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 19, Section 20, Section 22.
This module teaches the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane through a bounded, source-backed coursebook chapter. [ageint237]; [ageint258].

21.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Advanced Persistent Threats (APTs): source context, topic focus, and reader task

Navigation. Parent section: Section 21.

21.1.1 Advanced Persistent Threats (APTs) orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 21.

21.1.2 Advanced Persistent Threats (APTs) conceptual primer: source context, core model, and reader task

This chapter teaches cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The chapter uses **Defensive Cyber-Intelligence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.
The central distinction is to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. Core topics include **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis; Nation-State vs. Ideological Actor Attack Patterns**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint237]; [ageint258].
Learners move from vocabulary and the **Defensive Cyber-Intelligence Lens** distinction through topic lessons on **APT Definitions, Lifecycle, and Attribution** with evidence and misconception checks, then assemble a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** with safety and rights gates.

21.1.3 Advanced Persistent Threats (APTs) learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 21.

- Connect **APT Definitions, Lifecycle, and Attribution and APT Risk Propagation Models: ATT&CK-Based Analysis** to **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions.

21.1.4 Advanced Persistent Threats (APTs) core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 21.

Term	Working definition
Indicator	an observable signal that may support defensive detection or investigation
TTP	a tactic, technique, or procedure used for defensive behavioral description; a taxonomy match is neither a unique actor signature nor attribution
Sighting	a bounded observation of a possible indicator in a given context
Handling rule	a sharing, marking, or retention limit for threat information
Lessons learned	the post-incident evidence that changes controls or playbooks

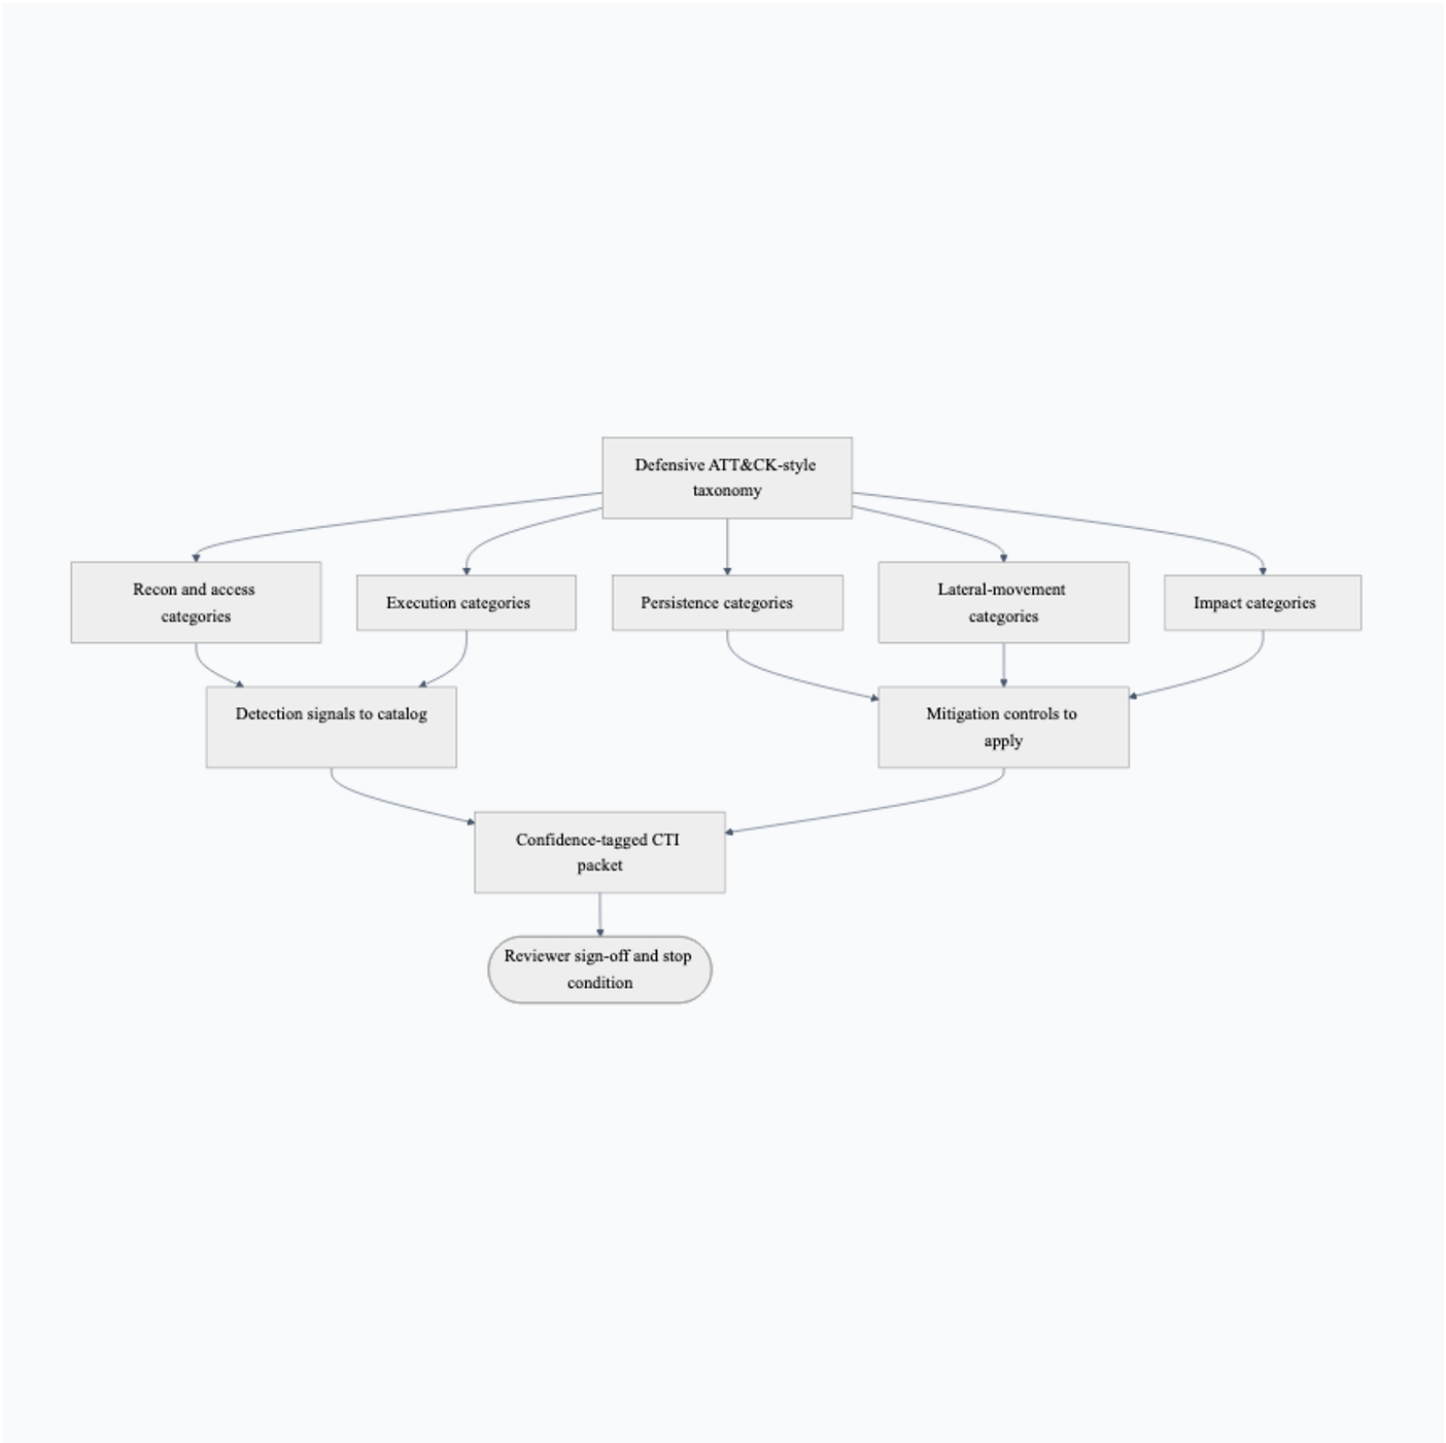

Figure 55: This diagram organizes the ATT&CK-style adversary tactic categories purely as a defensive taxonomy, mapping each phase to the detection signals and mitigation controls a defender catalogs, never to attack instructions. It is anchored to the technical intelligence and cyber operations / advanced persistent threats apts section; use it to inspect Defensive ATT&CK-style taxonomy, Recon and access categories, Execution categories, and Persistence categories while preserving the distinction between curriculum structure, evidence boundary, and accountable practice.

21.2 Defensive Cyber-Intelligence Lens path for Advanced Persistent Threats (APTs): lesson cluster, safe artifact, and review

Navigation. Parent section: Section 21.

21.2.1 Advanced Persistent Threats (APTs) practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 21.

21.2.2 Advanced Persistent Threats (APTs) topic lessons: source-backed concepts and transfer tasks

Advanced Persistent Threats (APTs) builds cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The sequence opens with **APT Definitions, Lifecycle, and Attribution**, **APT Risk Propagation Models: ATT&CK-Based Analysis**, **Nation-State vs. Ideological Actor Attack Patterns** and applies the **Defensive Cyber-Intelligence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 52; module overview Section 21; curriculum atlas Section 2.

Contextual source routes. For module 13's topic-lessons section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

21.2.2.1 Lesson 1: APT Definitions, Lifecycle, and Attribution **Concept. APT Definitions, Lifecycle, and Attribution** studies APT reporting as attribution and confidence literacy: technical similarity, context, caveats, and geopolitical inference stay separate.

Worked reasoning and limits. APT is a characterization of an adversarial capability and sustained activity, not proof of a state sponsor or a universal lifecycle. Separate a publisher's cluster definition, an observed campaign, an inferred organization and a claimed sponsor. The inherited modelling-paper citation alone does not settle those identities or validate a particular attribution; label the definition's source and leave unsupported equivalences unresolved.

Why it matters. Without explicit treatment of **APT Definitions, Lifecycle, and Attribution**, indicator fixation undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **APT Definitions, Lifecycle, and Attribution**: [ageint072]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **APT Definitions, Lifecycle, and Attribution**, inspect the original passages. No displayable curriculum annotation is available for [ageint072]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **APT Definitions, Lifecycle, and Attribution**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **APT Definitions Lifecycle and Attribution**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that APT Definitions, Lifecycle, and Attribution can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Transfer task. Transfer **APT Definitions, Lifecycle, and Attribution** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.2.2 Lesson 2: APT Risk Propagation Models: ATT&CK-Based Analysis **Concept. APT Risk Propagation Models: ATT&CK-Based Analysis** studies APT reporting as attribution and confidence literacy: technical similarity, context, caveats, and geopolitical inference stay separate.

Worked reasoning and limits. A propagation graph proposes possible dependencies; its edges are not observed causal transitions merely because nodes carry ATT&CK labels. Any calculated risk depends on the model's assumptions, input probabilities and validation population, none of which is supplied by a title or abstract alone. Compare a hypothetical edge with a supplied record that could falsify it, and report model-scoped outputs separately from empirical intrusion likelihood.

Why it matters. Analysts use **APT Risk Propagation Models** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that indicator fixation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **APT Risk Propagation Models: ATT&CK-Based Analysis**: [ageint072]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **APT Risk Propagation Models**, inspect the original passages. No displayable curriculum annotation is available for [ageint072]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **APT Risk Propagation Models**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **APT Risk Propagation Models**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **APT Risk Propagation Models** work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that APT Risk Propagation Models: ATT&CK-Based Analysis is optional whenever separate defensive mapping and incident learning from exploit, persistence, or evasion instruction feels inconvenient.

Transfer task. Transfer **APT Risk Propagation Models** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.2.3 Lesson 3: Nation-State vs. Ideological Actor Attack Patterns **Concept. Nation-State vs. Ideological Actor Attack Patterns** is taught in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. The analytic distinction is to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. State sponsorship and ideological motivation are not mutually exclusive classes, and financially motivated contractors can complicate both labels. Shared tools, working hours and target sectors are compatible with multiple explanations and do not identify nationality or motive. The inherited study reference cannot support categorical differences without its inspected sampling and attribution criteria; this chapter makes no quantitative superiority or prevalence claim.

Why it matters. Analysts use **Nation-State vs. Ideological Actor Attack Patterns** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that indicator fixation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Nation-State vs. Ideological Actor Attack Patterns**: [ageint069]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Nation-State vs. Ideological Actor Attack Patterns**, inspect the original passages. No displayable curriculum annotation is available for [ageint069]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Nation-State vs. Ideological Actor Attack Patterns**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Nation-State vs Ideological Actor Attack**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Nation-State vs. Ideological Actor Attack Patterns establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Nation-State vs. Ideological Actor Attack Patterns** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.2.4 Lesson 4: Cyber infrastructure-abuse indicator review using fabricated records

Concept. Cyber infrastructure-abuse indicator review using fabricated records uses the taxonomy label to organize fabricated defensive observations, confidence, and control implications without describing adversary execution.

Worked reasoning and limits. Infrastructure observations distinguish a service, a hosting relationship, a time-bounded use and a hypothesized controller; they must not collapse into ownership or guilt. Shared hosting, reassignment and reused software can explain overlap without common control. The inherited AI-threat and software-assurance sources do not establish these named infrastructure techniques or a provider's knowing participation; analyse supplied fictional relation tables only, without resolution, scanning or evasion instructions.

Why it matters. Cyber infrastructure-abuse indicator review connects classroom vocabulary to Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Cyber infrastructure-abuse indicator review using fabricated records**: [ageint300], [ageint303], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Cyber infrastructure-abuse indicator review**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cyber infrastructure-abuse indicator review**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must map the indicator descriptor, the bounded claim about **Cyber infrastructure-abuse indicator review using**, the taxonomy caveat, the confidence note, the no-action boundary, and the reviewer who validates the labeling. Shape **Cyber infrastructure-abuse indicator review** work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Cyber infrastructure-abuse indicator review**: that a defensive taxonomy label is an action sequence rather than a vocabulary for describing and detecting behavior.

Transfer task. Apply this module's safe boundary for **Cyber infrastructure-abuse indicator review** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

21.2.2.5 Lesson 5: Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim

Concept. Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim is taught in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. The analytic distinction is to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The inherited Reddit AMA interest-check does not document a Mandiant methodology, so the raw heading's named-method attribution is unsupported. A classroom reconstruction can still distinguish evidence preservation, timeline interpretation and a decision record without claiming endorsement or validated response efficacy. Work exclusively from supplied inert records; no containment, eradication, live hunting or other operational response is authorized.

Why it matters. Incident-Record Review matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; indicator fixation is a common failure.

Source support. Inherited source-guide context for **Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim**: [ageint071]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Incident-Record Review**, inspect the original passages. Curriculum annotation for [ageint071]: Attribution becomes harder when its open-source … These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Incident-Record Review**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence,**

handling rule, and control implication for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Incident-Record Review**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Incident-Record Review** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Transfer task. Transfer **Incident-Record Review** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.2.6 Lesson 6: Threat Hunting Against APT Actors

Concept. Threat Hunting Against APT Actors studies APT reporting as attribution and confidence literacy: technical similarity, context, caveats, and geopolitical inference stay separate.

Worked reasoning and limits. A hunt hypothesis predicts a discriminating observation; a hit is a candidate record, not a malicious-actor finding. In a fictional offline packet, event E1 records inventory enumeration at 09:00, approved task card C1 schedules that enumeration at 09:00, duplicate feed E2 copies E1, and coverage card K1 says authentication records for 08:00–10:00 are absent. Comparison yields 'observed enumeration consistent with approved task; adversarial mapping unestablished', with one event lineage rather than two hits; removing C1 makes purpose unknown, not malicious. K1 prevents interpreting no authentication hits as no intrusion, and a high hypothetical impact rating would not increase attribution confidence or telemetry coverage. The attached AI/supply-chain sources are not evidence for a hunt's accuracy; no commands, scans, malware, blocking or live response are used.

Why it matters. Analysts use **Threat Hunting Against APT Actors** to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. A defensible treatment names the judgment it enables for defensive CTI normalization and tabletop incident learning review, the proof limit that indicator fixation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Threat Hunting Against APT Actors**: [ageint300], [ageint303], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Threat Hunting Against APT Actors**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Threat Hunting Against APT Actors**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **defensive CTI evidence packet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Threat Hunting Against APT Actors is optional whenever separate defensive mapping and incident learning from exploit, persistence, or evasion instruction feels inconvenient.

Transfer task. Transfer **Threat Hunting Against APT Actors** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.2.7 Lesson 7: APT Attribution: Technical Indicators vs. Geopolitical Context

Concept. APT Attribution: Technical Indicators vs. Geopolitical Context studies APT reporting as attribution and confidence literacy: technical similarity, context, caveats, and geopolitical inference stay separate.

Worked reasoning and limits. In a completed synthetic case, reports A and B repeat source S's claim that campaign X used artifact H; record C shows H was publicly shared before X, and no record links H to an operator. Collapsing A/B to one origin and testing the shared-tool alternative yields 'artifact overlap reported; operator and sponsor unknown', not attribution from two reports. Removing S eliminates the overlap claim, while adding C weakens H's discriminating value; stop before naming an actor and update if S retracts its claim. STIX can encode the competing assertions and TAXII can transport them, but those standards and ATLAS do not adjudicate factual attribution [ageint309, ageint310, ageint300].

Why it matters. Without explicit treatment of **APT Attribution: Technical Indicators vs. Geopolitical Context**, indicator fixation undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **APT Attribution: Technical Indicators vs. Geopolitical Context**: [ageint309], [ageint310], and [ageint300]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **APT Attribution: Technical Indicators vs. Geopolitical Context**, inspect the original passages. Curriculum annotation for [ageint309]: An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection. Curriculum annotation for [ageint310]: The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **APT Attribution**, build a **defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **APT Attribution**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **APT Attribution: Technical Indicators vs. Geopolitical Context** work as a **defensive CTI evidence packet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that APT Attribution: Technical Indicators vs. Geopolitical Context establishes intent without reviewing alternative explanations.

Transfer task. Transfer **APT Attribution: Technical Indicators vs. Geopolitical Context** to a second module by preserving defensive CTI

normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

21.2.3 Advanced Persistent Threats (APTs) worked safe example: synthetic inputs, evidence, and review

Worked example: a sample campus SOC reviews fabricated alert records after a tabletop incident. [ageint237]; [ageint258].

Contextual source routes. For module 13's worked-example section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **defensive cyber intelligence normalization**. Learners use a **defensive CTI evidence packet** and keep this boundary visible: No exploit, persistence, evasion, scanning, or production response instructions.

Frame. The classroom question centers on **APT Definitions, Lifecycle, and Attribution**. Excluded actions stay explicit, and the **Defensive Cyber-Intelligence Lens** planning question is: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?

Inputs. For the **APT Definitions, Lifecycle, and Attribution** scenario, use fabricated alerts A and B sharing one event ID, clean-image control C with the same digest, a process excerpt lacking command context, taxonomy descriptions, and a class-only sharing card. The Defensive Cyber-Intelligence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **APT Definitions, Lifecycle, and Attribution**, students first normalize timestamps, assets, event IDs, and indicator types; then merge A and B and compare the observed behavior with the taxonomy's requirements; use C to reject digest equality as sufficient evidence of maliciousness. Mark incomplete behavior mappings tentative and stop actor attribution or production response; hand the missing process context to the tabletop reviewer under the sharing restriction. Pause whenever an inference about APT Definitions, Lifecycle, and Attribution appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a CTI packet with one deduplicated A/B event, the separate benign control, a nonspecific digest, a tentative behavior mapping, unresolved cause and actor, and a named review owner; neither an indicator hit nor an ATT&CK label proves compromise or identifies a campaign Retain it as the **defensive CTI evidence packet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **APT Definitions, Lifecycle, and Attribution** as "Defensive Cyber-Intelligence Lens confirms it" is not enough. The revision ties the claim to defensive CTI normalization and tabletop incident learning, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **APT Definitions, Lifecycle, and Attribution** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

21.2.4 Advanced Persistent Threats (APTs) practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Defensive Cyber-Intelligence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

Contextual source routes. For module 13's practice-sequence section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare APT Definitions, Lifecycle, and Attribution, APT Risk Propagation Models: ATT&CK-Based Analysis, Nation-State vs. Ideological Actor Attack Patterns; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane.
2. Frame	Answer the lens question: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for APT Definitions, Lifecycle, and Attribution: defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the defensive CTI evidence packet fields for APT Definitions, Lifecycle, and Attribution.	Unit profile note.	Evidence artifacts include indicator context, TTP mapping.
4. Challenge	Test the misconception that APT Definitions, Lifecycle, and Attribution can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.	Failure-mode note.	The artifact applies the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

21.2.4.1 Advanced Persistent Threats (APTs) instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. [ageint237]; [ageint258].

21.2.4.2 Advanced Persistent Threats (APTs) extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 21.

Have learners swap artifacts and apply the **Defensive Cyber-Intelligence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.2.5 Advanced Persistent Threats (APTs) knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 21.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **APT Definitions, Lifecycle, and Attribution**.
2. Transfer the **Defensive Cyber-Intelligence Lens** artifact from **APT Definitions, Lifecycle, and Attribution** to the final topic, **APT Attribution: Technical Indicators vs. Geopolitical Context**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which indicator is useful only after context and confidence are added?
5. Correct this misconception: that APT Definitions, Lifecycle, and Attribution can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

21.2.5.1 Advanced Persistent Threats (APTs) answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **APT Definitions, Lifecycle, and Attribution** without source evidence, uncertainty, or a safe transfer task.

21.3 Advanced Persistent Threats (APTs) assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 21.

21.3.1 Advanced Persistent Threats (APTs) evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 21.

21.3.2 Advanced Persistent Threats (APTs) transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 21.

21.3.2.1 Advanced Persistent Threats (APTs) lineage and source tradition: profile, concepts, and first anchors This sits in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lineage: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. [ageint237]; [ageint258].

21.3.2.2 Advanced Persistent Threats (APTs) working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 21.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**, with provenance and reviewability throughout.

21.3.2.3 Advanced Persistent Threats (APTs) knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** fabricated alerts, public taxonomy labels, incident context, supplier evidence, and handling rules. [ageint237]; [ageint258].
- **Transforms:** indicator normalization, TTP mapping, confidence scoring, sharing review, and control-gap analysis.
- **Outputs:** defensive CTI packet, handling note, control implication, and incident-learning memo.
- **Failure modes:** exploit detail leakage, indicator fixation, unvetted sharing, and unsupported attribution.

21.3.2.4 Advanced Persistent Threats (APTs) transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 21.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.
- **Evidence contract:** keep the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as defensive CTI packet, handling note, control implication, and incident-learning memo that another reviewer can audit.

21.3.2.5 Advanced Persistent Threats (APTs) profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 21.

The matched profile emphasizes turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. The method stack is threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned; the local topic cluster is **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.3 Advanced Persistent Threats (APTs) evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 21.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** profile tells reviewers what evidence is strong enough for the module artifact built around **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.3.1 Advanced Persistent Threats (APTs) guide source spine: inherited keys and local citation roles Primary guide citations: [ageint237]; [ageint258]; [ageint261]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint072]; [ageint069]; [ageint071]; [ageint300]; [ageint303]; [ageint304]; [ageint309]; [ageint310].

21.3.3.2 Advanced Persistent Threats (APTs) verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint237]; [ageint258].

Tier	What counts	How it is used
Source guide	[ageint237]; [ageint258]; [ageint261]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint072]; [ageint069]; [ageint071]; [ageint300]; [ageint303]; [ageint304]; [ageint309]; [ageint310].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 13's source-canon section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis** and [ageint237]; [ageint258], but only directly verified source URLs are encoded as citations.

21.3.3.3 Advanced Persistent Threats (APTs) intelligence practice lens: evidence artifact and safety check Practice lens: **Defensive Cyber-Intelligence Lens** for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. [ageint237]; [ageint258].

Planning question: Which defensive observation, confidence level, handling rule, and control implication can be stated without teaching adversary action?

Evidence artifact: defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication.

Validation rule: verify that taxonomy labels are descriptive, indicators are contextualized, incident categories are reviewable, and outputs remain detection or assurance oriented. Applied to **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

Handoff contract: handoff separates observations, taxonomy labels, confidence, sharing limits, and defensive control recommendations.

Safety check: exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions.

21.3.3.4 Advanced Persistent Threats (APTs) runtime-to-reader map: generated sections and verifier surfaces **Navigation.** Parent section: Section 21.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	13.99	13.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Advanced Persistent Threats (APTs) to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Bounded autonomy, procurement, incident-response, and assurance studio	13.101	13.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Advanced Persistent Threats (APTs)	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Model-card, recoverability, retention, and learner-support evidence package	13.102	13.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Advanced Persistent Threats (APTs)	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
APT Definitions, Lifecycle, and Attribution	13.1	13.1 APT Definitions, Lifecycle, and Attribution	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

APT Attribution: Technical Indicators vs. Geopolitical Context	13.7	13.7 APT Attribution: Technical Indicators vs. Geopolitical Context	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

21.3.3.5 Advanced Persistent Threats (APTs) reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 21.

Lesson topic	Practice lens	Evidence artifact	Safety check
APT Definitions, Lifecycle, and Attribution	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
APT Risk Propagation Models: ATT&CK-Based Analysis	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Nation-State vs. Ideological Actor Attack Patterns	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Cyber infrastructure-abuse indicator review using fabricated records	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions
Threat Hunting Against APT Actors	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

Lesson topic	Practice lens	Evidence artifact	Safety check
APT Attribution: Technical Indicators vs. Geopolitical Context	Defensive Cyber-Intelligence Lens	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication	exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions

21.3.3.6 Advanced Persistent Threats (APTs) annotated source ledger: real titles and local contribution Each source cited by this **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** module is paired below with its real title and a one-line note on what it contributes to **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

Source	Cited work	Curriculum annotation	Status
[ageint237]	Artificial Intelligence: An Accountability Framework for Federal Agencies and Other Entities	Official GAO AI accountability framework.	original source-guide; annotation metadata, not claim verification
[ageint258]	OpenAPI Specification	The official OpenAPI Initiative publications page, serving as a central index for the OpenAPI Specification and related standards including the Arazzo and Overlay specifications. It provides access to multiple specification versions (2.0, 3.0, 3.1, and 3.2) and their corresponding downloadable schemas identified by release date, along with a registry of extensions, formats, media types, and other resources.	verified source-guide; annotation metadata, not claim verification
[ageint261]	RFC 9110: HTTP Semantics	RFC 9110, the official IETF standards document defining the core semantics and architecture of HTTP, published in June 2022 and consolidating nine earlier RFCs. It establishes terminology and protocol aspects shared across HTTP versions, including methods, status codes, header fields, content negotiation, conditional and range requests, authentication, and the http and https URI schemes.	verified source-guide; annotation metadata, not claim verification
[ageint273]	WCAG 2 Overview	The W3C Web Accessibility Initiative overview of the Web Content Accessibility Guidelines (WCAG), an international standard for making web content accessible to people with disabilities. It explains that WCAG is organized around four principles (perceivable, operable, understandable, robust) with testable success criteria at three conformance levels (A, AA, AAA), and covers versions 2.0, 2.1, and 2.2.	verified source-guide; annotation metadata, not claim verification
[ageint276]	What is a Data Protection Impact Assessment and When Is This Mandatory?	A European Data Protection Board FAQ page, part of its data protection guide for small businesses, explaining Data Protection Impact Assessments (DPIAs) and when they are mandatory. It describes a DPIA as a written assessment of the impact of a planned processing operation, required when processing poses high risks to individuals' rights.	verified source-guide; annotation metadata, not claim verification
[ageint285]	NIST AI Resource Center	The NIST AI Resource Center (AIRC), a government platform supporting implementation of the NIST AI Risk Management Framework, a voluntary framework for managing AI risk. It provides the core framework along with a playbook of practical actions, profiles tailored to specific sectors and technologies, use cases, and crosswalks linking the framework to other governance structures.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification
[ageint290]	NIST SP 800-218A: Secure Software Development Practices for Generative AI and Dual-Use Foundation Models	NIST Special Publication 800-218A (July 2024), which augments the Secure Software Development Framework with practices specific to AI model development across the software lifecycle. Produced in response to Executive Order 14110, it addresses AI model producers, developers building on those models, and acquirers of AI systems, and is designed to be used alongside NIST SP 800-218.	verified source-guide; annotation metadata, not claim verification
[ageint294]	M-25-21: Accelerating Federal Use of AI through Innovation, Governance, and Public Trust	An April 2025 Office of Management and Budget memorandum (M-25-21) directing executive branch agencies on federal use of artificial intelligence. Issued under Executive Order 14179, it instructs agencies to accelerate adoption of AI to improve public services and government efficiency while maintaining safeguards for civil rights, civil liberties, and privacy.	verified source-guide; annotation metadata, not claim verification
[ageint072]	ATT&CK-based Advanced Persistent Threat attacks risk propagation	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint069]	Assessing nation-state-sponsored cyberattacks using aspects	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint071]	I Led IR on Nation-State Attacks at Mandiant, FireEye & CrowdStrike	Attribution becomes harder when its open-source …	original source-guide; annotation metadata, not claim verification
[ageint300]	MITRE ATLAS	MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy.	original source-guide; annotation metadata, not claim verification
[ageint303]	Software Security in Supply Chains	An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint304]	Secure Software Development Framework (SSDF) Version 1.1: Recommendations for Mitigating the Risk of Software Vulnerabilities	NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences.	verified source-guide; annotation metadata, not claim verification
[ageint309]	STIX Version 2.1	An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection.	verified source-guide; annotation metadata, not claim verification
[ageint310]	TAXII Version 2.1	The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 21; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

21.3.4 Advanced Persistent Threats (APTs) governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 21.

21.3.5 Advanced Persistent Threats (APTs) analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 13's governance-boundary section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. [ageint237]; [ageint258].

Curriculum topic spine: APT Definitions, Lifecycle, and Attribution, **APT Risk Propagation Models: ATT&CK-Based Analysis**, **Nation-State vs. Ideological Actor Attack Patterns**. **Recorded source cluster; inspection and scope limits apply:** [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]; [Cybersecurity and Infrastructure Security Agency, 2026d]; [National Institute of Standards and Technology, 2025c]; [Organisation for Economic Co-operation and Development, 2025a].

Conceptual depth: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules.

Method stack: threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned.

Composability contract: indicators, TTP mappings, affected assets, supplier evidence, response actions, and sharing constraints remain independently reusable.

Known failure modes: indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow.

Defensive boundary: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions. Applied to **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

Anchor	Why it matters here
[National Institute of Standards and Technology, 2016]	Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2025]	OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2021]	OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED. Checked as of 2026-11-06; role: curriculum_anchor.
[MITRE, 2026b]	Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization. Checked as of 2026-05-21; role: curriculum_anchor.
[Cybersecurity and Infrastructure Security Agency, 2026d]	Official catalog for prioritizing known exploited vulnerabilities as defensive triage inputs, not as exploitation instructions. Checked as of 2026-05-21; role: curriculum_anchor.
[National Institute of Standards and Technology, 2025c]	Official incident-response profile for preparation, detection, response, recovery, and continuous improvement under CSF 2.0. Checked as of 2026-05-21; role: curriculum_anchor.
[Organisation for Economic Co-operation and Development, 2025a]	OECD policy paper proposing a common AI incident reporting framework for jurisdictions and sectors, including criteria for impact and risk characterization. Checked as of 2026-08-30; role: curriculum_anchor.

21.3.5.1 Advanced Persistent Threats (APTs) evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint237]; [ageint258].

21.3.6 Advanced Persistent Threats (APTs) agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 21.

AGEINT translation is bounded by the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.6.1 Advanced Persistent Threats (APTs) permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 21.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.6.2 Advanced Persistent Threats (APTs) excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint237]; [ageint258] and **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

21.3.7 Advanced Persistent Threats (APTs) governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 21.
Governance is practiced as a gate on the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Learners use the **Defensive Cyber-Intelligence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.7.1 Advanced Persistent Threats (APTs) governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint237]; [ageint258].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** failure modes and the **Defensive Cyber-Intelligence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

21.3.7.2 Advanced Persistent Threats (APTs) evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Defensive Cyber-Intelligence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.7.3 Advanced Persistent Threats (APTs) current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. [ageint237]; [ageint258].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_nist_sp_800_150` for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**?	Guide to Cyber Threat Information Sharing, NIST SP 800-150; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs.
What does the module inherit from `official_oasis_stix_21` for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**?	STIX Version 2.1; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings.
What does the module inherit from `official_oasis_taxii_21` for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**?	TAXII Version 2.1; lane `cyber_threat_intelligence`; checked 2026-11-06.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED.
What does the module inherit from `official_mitre_attack_enterprise` for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**?	MITRE ATT&CK Enterprise Matrix; lane `cyber_threat_intelligence`; checked 2026-05-21.	defensive CTI packet with indicator context, taxonomy mapping, confidence, handling rule, and control implication; Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 21; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

21.3.8 Advanced Persistent Threats (APTs) assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 21.

21.3.9 Advanced Persistent Threats (APTs) assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 21.

21.3.9.1 Advanced Persistent Threats (APTs) capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis** and [ageint237]; [ageint258].

21.3.9.2 Advanced Persistent Threats (APTs) instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis** and [ageint237]; [ageint258].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

21.3.9.3 Advanced Persistent Threats (APTs) assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
APT Definitions, Lifecycle, and Attribution; **APT Risk Propagation Models: ATT&CK-Based Analysis**; **Nation-State vs. Ideological Actor Attack Patterns**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: verify that taxonomy labels are descriptive, indicators are contextualized, incident categories are reviewable, and outputs remain detection or assurance oriented.
Cyber infrastructure-abuse indicator review using fabricated records; **Incident-Record Review: Limits of the Inherited Mandiant Methodology Claim**; **Threat Hunting Against APT Actors**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
APT Attribution: Technical Indicators vs. Geopolitical Context	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude exploit steps, evasion instructions, malware construction, credential misuse, phishing instructions, and live response actions.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

21.3.10 Advanced Persistent Threats (APTs) refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint237]; [ageint258] and **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**.

21.3.10.1 Advanced Persistent Threats (APTs) refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. The local signals begin with [ageint237]; [ageint258].

21.3.10.2 Advanced Persistent Threats (APTs) claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**, and the source spine for these checks begins with [ageint237]; [ageint258].

21.3.11 Advanced Persistent Threats (APTs) reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint237]; [ageint258].

Contextual source routes. For module 13's review-checklist section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis**. [ageint237]; [ageint258].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.

- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

21.3.12 Advanced Persistent Threats (APTs) learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **APT Definitions, Lifecycle, and Attribution; APT Risk Propagation Models: ATT&CK-Based Analysis** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint237]; [ageint258].
Section 2, Section 19, Section 20, Section 22

22 Supply Chain Intelligence Attacks

22.0.1 Supply Chain Intelligence Attacks figures and course links: visual evidence, source flow, and navigation

The module uses Figure 56 and Figure 52 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 19, Section 21, Section 23.
This module teaches the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane through a bounded, source-backed coursebook chapter. [ageint258]; [ageint266].

22.1 Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense frame for Supply Chain Intelligence Attacks: source context, topic focus, and reader task

Navigation. Parent section: Section 22.

22.1.1 Supply Chain Intelligence Attacks orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 22.

22.1.2 Supply Chain Intelligence Attacks conceptual primer: source context, core model, and reader task

This chapter teaches cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The chapter uses **Software-Supply-Chain Assurance Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.
The central distinction is to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction. Core topics include **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation; XZ Utils maintainer-trust case review for software supply-chain governance**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint258]; [ageint266].
Learners move from vocabulary and the **Software-Supply-Chain Assurance Lens** distinction through topic lessons on **Supply Chain Operations as Strategic Intelligence Tradecraft** with evidence and misconception checks, then assemble a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** with safety and rights gates.

22.1.3 Supply Chain Intelligence Attacks learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 22.

- Connect **Supply Chain Operations as Strategic Intelligence Tradecraft and SolarWinds/SUNBURST: The Six-Month Patient Operation** to **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions.

22.1.4 Supply Chain Intelligence Attacks core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 22.

Term	Working definition
Indicator	an observable signal that may support defensive detection or investigation
TTP	a tactic, technique, or procedure used for defensive behavioral description; a taxonomy match is neither a unique actor signature nor attribution
Sighting	a bounded observation of a possible indicator in a given context
Handling rule	a sharing, marking, or retention limit for threat information
Lessons learned	the post-incident evidence that changes controls or playbooks

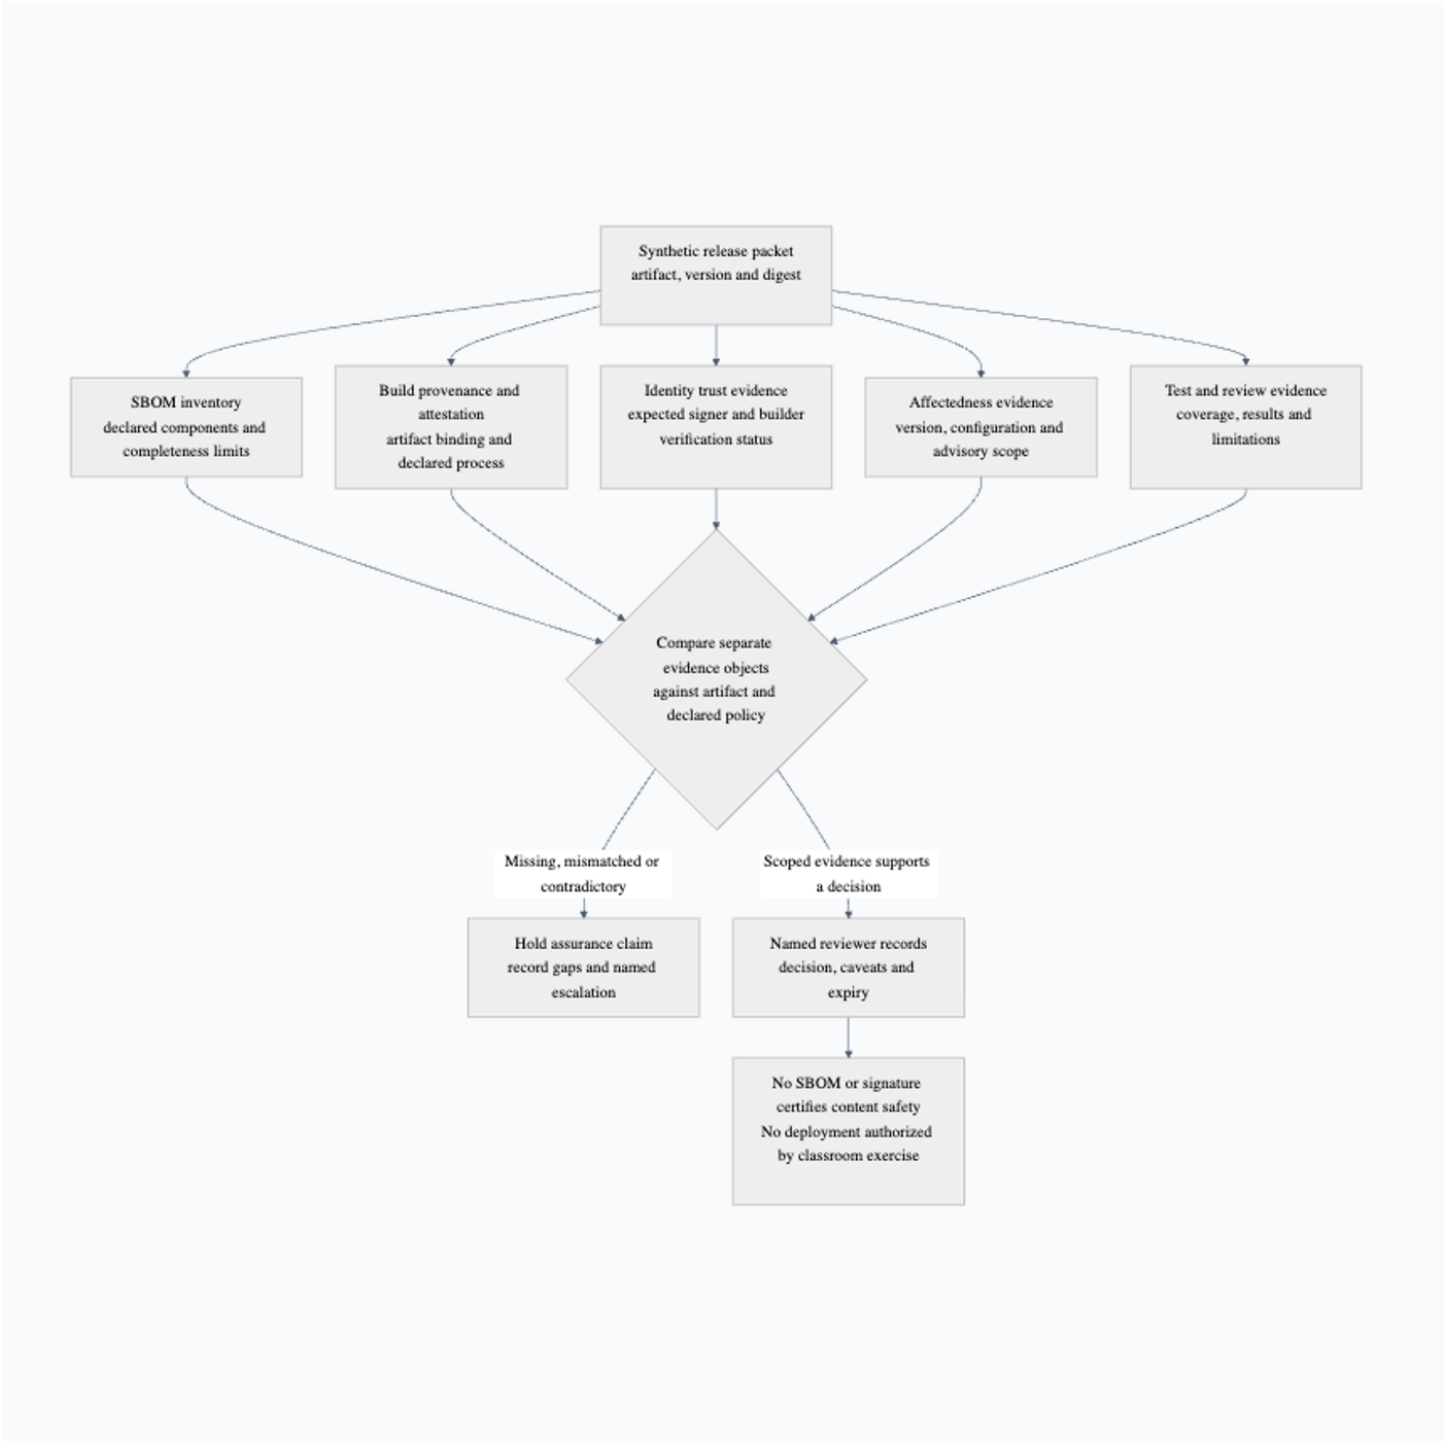

Figure 56: SBOM inventory, provenance and attestations, identity trust, affectedness analysis, and test evidence answer different questions. This author-defined classroom flow compares those objects against a particular artifact and declared policy rather than funneling them through an SBOM as certification. Missing, mismatched, or contradictory evidence remains explicit; any acceptance is scoped and reviewed, not proof that a signed or inventoried artifact is safe.

22.2 Software-Supply-Chain Assurance Lens path for Supply Chain Intelligence Attacks: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 22.

22.2.1 Supply Chain Intelligence Attacks practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 22.

22.2.2 Supply Chain Intelligence Attacks topic lessons: source-backed concepts and transfer tasks

Supply Chain Intelligence Attacks builds cyber threat intelligence as defensive normalization: incidents, indicators, TTPs, vendor risks, and sharing rules become useful only when scoped and validated. The sequence opens with **Supply Chain Operations as Strategic Intelligence Tradecraft**, **SolarWinds/SUNBURST: The Six-Month Patient Operation**, **XZ Utils maintainer-trust case review for software supply-chain governance** and applies the **Software-Supply-Chain Assurance Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 52; module overview Section 22; curriculum atlas Section 2.

Contextual source routes. For module 14's topic-lessons section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

22.2.2.1 Lesson 1: Supply Chain Operations as Strategic Intelligence Tradecraft

Concept. Supply Chain Operations as Strategic Intelligence Tradecraft shows how package provenance, social trust, build integrity, and assurance controls turn a software incident into reviewable evidence.

Worked reasoning and limits. A supply-chain assessment follows trust and artifact dependencies across development, build, distribution and use; it does not teach acquisition operations. Package identity, vulnerability affectedness, deployment and exploitability are separate claims. Analytic standards support distinguishing observations from judgments, not presuming compromise from a supplier relationship [ageint297].

Why it matters. Supply Chain Operations connects classroom vocabulary to Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Supply Chain Operations as Strategic Intelligence Tradecraft**: [ageint297] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Supply Chain Operations**, inspect the original passages. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Supply Chain Operations**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Supply Chain Operations as Strategic**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Supply Chain Operations** work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Supply Chain Operations as Strategic Intelligence Tradecraft replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Supply Chain Operations** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.2 Lesson 2: SolarWinds/SUNBURST: The Six-Month Patient Operation

Concept. SolarWinds/SUNBURST: The Six-Month Patient Operation shows how package provenance, social trust, build integrity, and assurance controls turn a software incident into reviewable evidence.

Worked reasoning and limits. The inherited 'six-month' phrase is a narrative framing, not a verified duration for every phase or victim. Separate development, distribution, installation, follow-on activity and discovery windows; receiving an affected update does not by itself establish that follow-on intrusion occurred. The vendor glossary is secondary orientation rather than primary evidence for exact timing, operator identity or the efficacy of its suggested controls, so those particulars remain bounded or unknown.

Why it matters. SolarWinds/SUNBURST matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; indicator fixation is a common failure.

Source support. Inherited source-guide context for **SolarWinds/SUNBURST: The Six-Month Patient Operation**: [ageint073]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **SolarWinds/SUNBURST**, inspect the original passages. Curriculum annotation for [ageint073]: This Fortinet cybersecurity glossary page provides educational material about the SolarWinds supply chain attack. It explains how attackers compromised SolarWinds' Orion monitoring software with malicious code that spread to roughly 18,000 customers through software updates beginning in early 2020, and notes the attack's extended timeline and impact on U.S. federal agencies and major companies. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **SolarWinds/SUNBURST**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **SolarWinds/SUNBURST**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **SolarWinds/SUNBURST** work as a **defensive CTI evidence packet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that SolarWinds/SUNBURST: The Six-Month Patient Operation can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Transfer task. Transfer **SolarWinds/SUNBURST** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.3 Lesson 3: XZ Utils maintainer-trust case review for software supply-chain governance

Concept. XZ Utils maintainer-trust case review for software supply-chain governance shows how package provenance, social trust, build integrity, and assurance controls turn a software incident into reviewable evidence.

Worked reasoning and limits. Separate a public contributor handle, observed repository actions and an inferred human or organizational identity; the handle is not proof of a person's legal identity or sponsor. The inherited 'two-year' narrative does not establish the duration of every preparatory act or the causal effect of each social interaction. These secondary accounts motivate artifact and trust-boundary analysis, not a reconstruction of covert recruitment or an attribution conclusion.

Why it matters. XZ Utils maintainer-trust case review matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; indicator fixation is a common failure.

Source support. Inherited source-guide context for **XZ Utils maintainer-trust case review for software supply-chain governance**: [ageint074], [ageint075], and [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **XZ Utils maintainer-trust case review**, inspect the original passages. Curriculum annotation for [ageint074]: A Vectra AI blog post from April 2024 analyzing the XZ Utils backdoor, a malicious commit discovered on March 29, 2024 in a widely used open-source compression library that could compromise affected systems via SSH. The article frames the incident as a supply chain compromise affecting both open-source and commercial software, drawing comparison to SolarWinds. Curriculum annotation for [ageint075]: An Invicti Security blog post from April 2024 analyzing the xz-utils backdoor, a software supply chain compromise discovered in versions 5.6.0 and 5.6.1 of the compression library. It describes how malicious code was hidden in test files and assembled only during compilation, potentially enabling unauthenticated remote code execution via OpenSSH, and how a long-term contributor gradually gained maintainer trust before inserting it. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **XZ Utils maintainer-trust case review**, build a maintainer-trust evidence card with provenance, communication-risk signal, uncertainty, and escalation boundary. Shape **XZ Utils maintainer-trust case review** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that a familiar maintainer name or popular package is a substitute for verifying provenance, integrity, and the chain of trust.

Transfer task. Transfer **XZ Utils maintainer-trust case review** from this module to a second motif by preserving defensive CTI normalization and tabletop incident learning, replacing action with audit, and naming the blocked use.

22.2.2.4 Lesson 4: Maintainer-contact provenance review for software supply-chain governance

Concept. Maintainer-contact provenance review for software supply-chain governance analyzes how trust, maintainer contact, and package provenance become supply-chain assurance evidence without contacting or profiling real maintainers.

Worked reasoning and limits. Sock-puppetry allegations concern possible common control of multiple accounts; matching tone or pressure on a maintainer does not establish that control. The analogy to HUMINT cover is an interpretive comparison, not proof that a formal human-intelligence operation occurred. Preserve distinct account records and unsupported linkage hypotheses, and do not provide impersonation, engagement or account-creation procedures.

Why it matters. Maintainer-contact provenance review connects classroom vocabulary to Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Maintainer-contact provenance review for software supply-chain governance**: [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Maintainer-contact provenance review**, inspect the original passages. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Maintainer-contact provenance review**, build a maintainer-trust evidence card with provenance, communication-risk signal, uncertainty, and escalation boundary. Shape **Maintainer-contact provenance review** work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that a familiar maintainer name or popular package is a substitute for verifying provenance, integrity, and the chain of trust.

Transfer task. Apply this module's safe boundary for **Maintainer-contact provenance review** to another artifact while keeping defensive CTI normalization and tabletop incident learning and reviewer ownership explicit.

22.2.2.5 Lesson 5: CVE-2024-3094: CVSS 10.0 Backdoor Mechanism

Concept. CVE-2024-3094: CVSS 10.0 Backdoor Mechanism treats the vulnerability record as an assurance case: severity, affected component, provenance, mitigation status, and uncertainty stay separate.

Worked reasoning and limits. A CVSS score expresses severity under a specified scoring version and vector, not a 100% compromise probability or proof that every installation is exploitable. Treat the inherited 10.0 label as a reported rating requiring a dated advisory, vector and affected configuration before reuse. Distinguish the exact source/release artifact, build conditions, installed binary and reachable vulnerable behaviour; no mechanism reproduction or exploit execution is required.

Why it matters. Without explicit treatment of **CVE-2024-3094**, indicator fixation undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **CVE-2024-3094: CVSS 10.0 Backdoor Mechanism**: [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **CVE-2024-3094**, inspect the original passages. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals

and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **CVE-2024-3094**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **CVE**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **CVE-2024-3094** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that CVE-2024-3094: CVSS 10.0 Backdoor Mechanism replaces human review whenever evidence looks plausible.

Transfer task. Transfer **CVE-2024-3094** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.6 Lesson 6: Attribution Limits: The Inherited APT29/SVR Similarity Hypothesis

Concept. Attribution Limits: The Inherited APT29/SVR Similarity Hypothesis uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. The raw inherited APT29/SVR wording is an attribution hypothesis, not an established conclusion supported by this encyclopedia citation. Patience, social engineering and software tampering are non-exclusive similarities that cannot identify an operator or sponsor. Record the comparison as unsupported and retain alternative actors or unknown control; do not turn stylistic resemblance into a nationality claim.

Why it matters. Attribution Limits matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; indicator fixation is a common failure.

Source support. Inherited source-guide context for **Attribution Limits: The Inherited APT29/SVR Similarity Hypothesis**: [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Attribution Limits**, inspect the original passages. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Attribution Limits**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Attribution Limits**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Attribution Limits** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Attribution Limits: The Inherited APT29/SVR Similarity Hypothesis can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Transfer task. Transfer **Attribution Limits** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.7 Lesson 7: Interaction Style Is Not an Attribution Signature

Concept. Interaction Style Is Not an Attribution Signature uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. The inherited phrase 'friendly yet aggressive and persistent' is a description, not a validated behavioural signature, diagnostic test or evidence of malicious intent. It can also describe ordinary disagreement, urgency or volunteer-project stress; judging people from it would generate unquantified false positives. Analyse supplied process facts such as review concentration and unexplained artifact changes instead of profiling maintainers or contributors.

Why it matters. Without explicit treatment of **Interaction Style Is Not an Attribution Signature**, indicator fixation undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **Interaction Style Is Not an Attribution Signature**: [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Interaction Style Is Not an Attribution Signature**, inspect the original passages. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Interaction Style Is Not an Attribution Signature**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Interaction Style Is an Attribution**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape the same topic work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Interaction Style Is Not an Attribution Signature is optional whenever separate defensive mapping and incident learning from exploit, persistence, or evasion instruction feels inconvenient.

Transfer task. Transfer **Interaction Style Is Not an Attribution Signature** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.8 Lesson 8: Maintainer-risk escalation review for software supply-chain governance

Concept. Maintainer-risk escalation review for software supply-chain governance analyzes how trust, maintainer contact, and package provenance become supply-chain assurance evidence without contacting or profiling real maintainers.

Worked reasoning and limits. The acquisition-operation analogy must not replace evidence about permissions, review and artifact changes. A maintainer's workload or a contributor's persistence does not establish targeting, collusion or culpability. The safe lesson is a non-personal review of how a supplied project's trust decisions were recorded, not collection about real maintainers or instructions for gaining their trust.

Why it matters. Maintainer-risk escalation review matters in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane because defensive CTI normalization and tabletop incident learning evidence must stay separate from judgment; indicator fixation is a common failure.

Source support. Inherited source-guide context for **Maintainer-risk escalation review for software supply-chain governance**: [ageint076]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Maintainer-risk escalation review**, inspect the original passages. Curriculum annotation for [ageint076]: In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Maintainer-risk escalation review**, build a maintainer-trust evidence card with provenance, communication-risk signal, uncertainty, and escalation boundary. Shape **Maintainer-risk escalation review** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that a familiar maintainer name or popular package is a substitute for verifying provenance, integrity, and the chain of trust.

Transfer task. Reuse the **Maintainer-risk escalation review** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

22.2.2.9 Lesson 9: Countermeasures: SBOM, SLSA Framework, Sigstore

Concept. Countermeasures: SBOM, SLSA Framework, Sigstore shows how package provenance, social trust, build integrity, and assurance controls turn a software incident into reviewable evidence.

Worked reasoning and limits. Keep SBOM inventory, build provenance, signing identity and source review separate: a declared inventory is not completeness proof, and a valid signature does not prove benign contents; SSDF is process guidance rather than case-specific efficacy evidence [ageint304]. In a completed fictional packet, M1 declares 'atlas-parser' 2.4/digest D1, advisory A1 concerns supplier Q's 2.4/D2, and the installed digest is absent, yielding 'name/version match only; deployment, affectedness and exploitability unknown'. Classroom trust card T1 expects builder B1, signer S1 and source revision R1: supplied release P1 has artifact D1 but provenance subject D2, so subject binding fails, while P2 has matching subject D1 and a valid S1 signature but builder B2, so it fails the separate expected-builder check; neither is accepted under T1. A supplied component list omitting dependency status is incomplete evidence, not evidence of no dependencies, and a third packet passing T1 would establish only those checks, not code safety. Same-name supplier R is a negative control against name-only joins; stop at missing identity/deployment evidence and retain each failed expectation, following the distinct digest, signature and expectation checks in the chosen SLSA v1.1 guidance [Supply-chain Levels for Software Artifacts Project, 2026], without executing any artifact.

Why it matters. Countermeasures: SBOM, SLSA Framework, Sigstore connects classroom vocabulary to Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Countermeasures: SBOM, SLSA Framework, Sigstore**: [ageint300], [ageint304], and [ageint306]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Countermeasures: SBOM, SLSA Framework, Sigstore**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. Curriculum annotation for [ageint306]: Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Countermeasures**, build a **software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps** for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Countermeasures**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Countermeasures: SBOM, SLSA Framework, Sigstore** work as a **defensive CTI evidence packet** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that Countermeasures: SBOM, SLSA Framework, Sigstore replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Countermeasures: SBOM, SLSA Framework, Sigstore** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.2.10 Lesson 10: Threat Intelligence Sharing for ICS Supply Chain (arXiv Survey)

Concept. Threat Intelligence Sharing for ICS Supply Chain (arXiv Survey) shows how package provenance, social trust, build integrity, and assurance controls turn a software incident into reviewable evidence.

Worked reasoning and limits. The inspected arXiv v3 study (27 January 2026) examines three incidents, 196 procedure examples across 79 techniques and 22 malware families, plus nine vulnerability advisories, with LLM-assisted observable extraction [Hahn et al., 2026]. Its representation and technical-detail findings are bounded by that corpus and extraction method, not proof that all ICS sharing is ineffective; proposed STIX extensions are not validated prevention outcomes. In a fictional report, 'component Z changed' can be represented as text but lacks version, time and observation method, so the worked result is 'representable assertion; insufficient context for a justified component-change judgment'. Adding a second serialized copy supplies no missing context, while a supplied correction to 'documentation changed' withdraws the software-change interpretation. No live ICS interaction, detector deployment or empirical efficacy claim follows from this record exercise.

Why it matters. Without explicit treatment of **Threat Intelligence Sharing**, indicator fixation undermines defensive CTI normalization and tabletop incident learning review; the lesson builds the habit to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Source support. Inherited source-guide context for **Threat Intelligence Sharing for ICS Supply Chain (arXiv Survey)**: [Hahn et al., 2026]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025].

Evidence to inspect. For **Threat Intelligence Sharing**, inspect the original passages. Curriculum annotation for [Hahn et al., 2026]: An arXiv preprint, version 3 dated 27 January 2026. Its abstract and introduction describe three incident reviews, 196 procedure examples across 79 ATT&CK techniques and 22 ICS-related malware families, and nine vulnerability advisories. The authors analyze representation and technical-detail limitations in that corpus using automated observable extraction; this is not a field evaluation proving that ICS information sharing generally remains ineffective. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Threat Intelligence Sharing**, build a **software-supply-chain assurance packet with package provenance,**

maintainer-risk notes, build-integrity evidence, and control gaps for this defensive CTI normalization and tabletop incident learning topic. The artifact must name the source descriptor, the bounded claim about **Threat Intelligence Sharing for ICS**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Threat Intelligence Sharing** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Threat Intelligence Sharing for ICS Supply Chain (arXiv Survey) can be used while ignoring the rule to separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.

Transfer task. Transfer **Threat Intelligence Sharing** to a second module by preserving defensive CTI normalization and tabletop incident learning, changing the source evidence, and naming a new reviewer.

22.2.3 Supply Chain Intelligence Attacks worked safe example: synthetic inputs, evidence, and review

Worked example: a sample campus SOC reviews fabricated alert records after a tabletop incident. [ageint258]; [ageint266].

Contextual source routes. For module 14's worked-example section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **defensive cyber intelligence normalization**. Learners use a **defensive CTI evidence packet** and keep this boundary visible: No exploit, persistence, evasion, scanning, or production response instructions.

Frame. The classroom question centers on **Supply Chain Operations as Strategic Intelligence Tradecraft**. Excluded actions stay explicit, and the **Software-Supply-Chain Assurance Lens** planning question is: Which package, maintainer signal, build artifact, provenance claim, and assurance control needs review?

Inputs. For the **Supply Chain Operations as Strategic Intelligence Tradecraft** scenario, use fabricated alerts A and B sharing one event ID, clean-image control C with the same digest, a process excerpt lacking command context, taxonomy descriptions, and a class-only sharing card. The Software-Supply-Chain Assurance Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Supply Chain Operations as Strategic Intelligence Tradecraft**, students first normalize timestamps, assets, event IDs, and indicator types; then merge A and B and compare the observed behavior with the taxonomy's requirements; use C to reject digest equality as sufficient evidence of maliciousness. Mark incomplete behavior mappings tentative and stop actor attribution or production response; hand the missing process context to the tabletop reviewer under the sharing restriction. Pause whenever an inference about Supply Chain Operations as Strategic Intelligence Tradecraft appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a CTI packet with one deduplicated A/B event, the separate benign control, a nonspecific digest, a tentative behavior mapping, unresolved cause and actor, and a named review owner; neither an indicator hit nor an ATT&CK label proves compromise or identifies a campaign Retain it as the **defensive CTI evidence packet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Supply Chain Operations as Strategic Intelligence Tradecraft** as "Software-Supply-Chain Assurance Lens confirms it" is not enough. The revision ties the claim to defensive CTI normalization and tabletop incident learning, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Supply Chain Operations as Strategic Intelligence Tradecraft** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

22.2.4 Supply Chain Intelligence Attacks practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Software-Supply-Chain Assurance Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

Contextual source routes. For module 14's practice-sequence section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Supply Chain Operations as Strategic Intelligence Tradecraft, SolarWinds/SUNBURST: The Six-Month Patient Operation, XZ Utils maintainer-trust case review for software supply-chain governance; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane.
2. Frame	Answer the lens question: Which package, maintainer signal, build artifact, provenance claim, and assurance control needs review?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Supply Chain Operations as Strategic Intelligence Tradecraft: software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the defensive CTI evidence packet fields for Supply Chain Operations as Strategic Intelligence Tradecraft.	Unit profile note.	Evidence artifacts include indicator context, TTP mapping.

Move	Learner action	Output	Check
4. Challenge	Test the misconception that Supply Chain Operations as Strategic Intelligence Tradecraft replaces human review whenever evidence looks plausible.	Failure-mode note.	The artifact applies the key distinction: separate defensive mapping and incident learning from exploit, persistence, or evasion instruction.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

22.2.4.1 Supply Chain Intelligence Attacks instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. [ageint258]; [ageint266].

22.2.4.2 Supply Chain Intelligence Attacks extension exercise: peer validation and refresh trigger review Navigation. Parent section: Section 22.

Have learners swap artifacts and apply the **Software-Supply-Chain Assurance Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.2.5 Supply Chain Intelligence Attacks knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 22.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Supply Chain Operations as Strategic Intelligence Tradecraft**.
2. Transfer the **Software-Supply-Chain Assurance Lens** artifact from **Supply Chain Operations as Strategic Intelligence Tradecraft** to the final topic, **Threat Intelligence Sharing for ICS Supply Chain**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which indicator is useful only after context and confidence are added?
5. Correct this misconception: that Supply Chain Operations as Strategic Intelligence Tradecraft replaces human review whenever evidence looks plausible.

22.2.5.1 Supply Chain Intelligence Attacks answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Supply Chain Operations as Strategic Intelligence Tradecraft** without source evidence, uncertainty, or a safe transfer task.

22.3 Supply Chain Intelligence Attacks assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 22.

22.3.1 Supply Chain Intelligence Attacks evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 22.

22.3.2 Supply Chain Intelligence Attacks transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 22.

22.3.2.1 Supply Chain Intelligence Attacks lineage and source tradition: profile, concepts, and first anchors This sits in the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lineage: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. [ageint258]; [ageint266].

22.3.2.2 Supply Chain Intelligence Attacks working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 22.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**, with provenance and reviewability throughout.

22.3.2.3 Supply Chain Intelligence Attacks knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** fabricated alerts, public taxonomy labels, incident context, supplier evidence, and handling rules. [ageint258]; [ageint266].
- **Transforms:** indicator normalization, TTP mapping, confidence scoring, sharing review, and control-gap analysis.
- **Outputs:** defensive CTI packet, handling note, control implication, and incident-learning memo.
- **Failure modes:** exploit detail leakage, indicator fixation, unvetted sharing, and unsupported attribution.

22.3.2.4 Supply Chain Intelligence Attacks transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 22.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.
- **Evidence contract:** keep the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as defensive CTI packet, handling note, control implication, and incident-learning memo that another reviewer can audit.

22.3.2.5 Supply Chain Intelligence Attacks profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 22.

The matched profile emphasizes turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules. The method stack is threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned; the local topic cluster is **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.3 Supply Chain Intelligence Attacks evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 22.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** profile tells reviewers what evidence is strong enough for the module artifact built around **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.3.1 Supply Chain Intelligence Attacks guide source spine: inherited keys and local citation roles Primary guide citations: [ageint258]; [ageint266]; [ageint268]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint073]; [ageint074]; [ageint075]; [ageint076]; [Hahn et al., 2026]; [ageint297]; [ageint298]; [ageint300]; [ageint304]; [ageint306].

22.3.3.2 Supply Chain Intelligence Attacks verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint258]; [ageint266].

Tier	What counts	How it is used
Source guide	[ageint258]; [ageint266]; [ageint268]; [ageint274]; [ageint278]; [ageint280]; [ageint287]; [ageint288]; [ageint295]; [ageint073]; [ageint074]; [ageint075]; [ageint076]; [Hahn et al., 2026]; [ageint297]; [ageint298]; [ageint300]; [ageint304]; [ageint306].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 14's source-canon section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation** and [ageint258]; [ageint266], but only directly verified source URLs are encoded as citations.

22.3.3.3 Supply Chain Intelligence Attacks intelligence practice lens: evidence artifact and safety check Practice lens: **Software-Supply-Chain Assurance Lens** for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. [ageint258]; [ageint266].

Planning question: Which package, maintainer signal, build artifact, provenance claim, and assurance control needs review?

Evidence artifact: software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps.

Validation rule: separate provenance evidence, social-trust signals, build controls, vulnerability claims, and attribution uncertainty. Applied to **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

Handoff contract: handoff preserves package identity, source evidence, build evidence, review owner, uncertainty, and remediation priority as separate fields.

Safety check: exclude exploit reproduction, maintainer targeting, backdoor mechanics, credential hunting, and live repository interference.

22.3.3.4 Supply Chain Intelligence Attacks runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 22.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	14.99	14.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Supply Chain Intelligence Attacks to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Software-Supply-Chain Assurance Lens	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps	exclude exploit reproduction, maintainer targeting, backdoor mechanics, credential hunting, and live repository interference

22.3.3.6 Supply Chain Intelligence Attacks annotated source ledger: real titles and local contribution Each source cited by this **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** module is paired below with its real title and a one-line note on what it contributes to **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

Source	Cited work	Curriculum annotation	Status
[ageint258]	OpenAPI Specification	The official OpenAPI Initiative publications page, serving as a central index for the OpenAPI Specification and related standards including the Arazzo and Overlay specifications. It provides access to multiple specification versions (2.0, 3.0, 3.1, and 3.2) and their corresponding downloadable schemas identified by release date, along with a registry of extensions, formats, media types, and other resources.	verified source-guide; annotation metadata, not claim verification
[ageint266]	PROV Overview	A W3C Working Group Note from 2013 that provides an overview and roadmap for the PROV family of specifications for representing and exchanging provenance information on the web. It defines provenance as information about the entities, activities, and people involved in producing data, used to assess quality, reliability, and trustworthiness.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint268]	Data Catalog Vocabulary (DCAT) Version 3	DCAT Version 3 is a W3C RDF vocabulary designed to facilitate interoperability between data catalogs published on the web, enabling organizations to describe datasets and data services using standardized terminology for improved discoverability and federated search. The specification organizes catalog metadata around seven core classes including Catalog, Dataset, Distribution, Data Service, and Dataset Series, drawing on established vocabularies such as Dublin Core and FOAF.	verified source-guide; annotation metadata, not claim verification
[ageint274]	CAST Universal Design for Learning Guidelines version 3.0	The official CAST website for the Universal Design for Learning (UDL) Guidelines version 3.0, released in 2024. The framework offers research-based guidance for designing inclusive learning environments and is organized around three principles: Engagement (motivation and emotional support), Representation (accessible presentation of information), and Action and Expression (diverse means of participation and communication).	verified source-guide; annotation metadata, not claim verification
[ageint278]	Recommendation of the Council on Public Procurement	The OECD Recommendation of the Council on Public Procurement (OECD/LEGAL/0411), a legal instrument adopted by the OECD Council in 2015 on the proposal of the Public Governance Committee. It frames public procurement as a pillar of strategic governance and service delivery and sets out principles for governments to follow.	verified source-guide; annotation metadata, not claim verification
[ageint280]	NIST SP 800-61 Rev. 3: Incident Response Recommendations and Considerations for Cybersecurity Risk Management	NIST SP 800-61 Rev. 3, published April 2025, integrates incident response guidance into broader cybersecurity risk management aligned with the NIST Cybersecurity Framework 2.0, superseding the 2012 Rev. 2. The publication addresses cyber threat information sharing, incident handling and management practices, and procedures for detecting, responding to, and recovering from security incidents.	verified source-guide; annotation metadata, not claim verification
[ageint287]	Datasheets for Datasets	A 2018 arXiv paper proposing 'datasheets for datasets,' a standardized documentation framework for machine learning datasets modeled on electronic component datasheets. The authors argue the field lacks consistent dataset documentation, which creates risk in high-stakes applications, and propose that datasets be accompanied by documentation covering motivation, composition, collection process, recommended uses, and test results.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint288]	Algorithmic Transparency Recording Standard Hub	A GOV.UK collection page serving as the hub for the UK Algorithmic Transparency Recording Standard (ATRS), maintained by the Government Digital Service. It provides a standardized template for documenting public-sector use of algorithmic tools, completion guidance, policy on scope and compliance, and a searchable repository of published transparency records.	verified source-guide; annotation metadata, not claim verification
[ageint295]	M-25-22: Driving Efficient Acquisition of Artificial Intelligence in Government	OMB Memorandum M-25-22 (April 3, 2025), Driving Efficient Acquisition of Artificial Intelligence in Government, issued under Executive Order 13960 and related directives. It provides guidance to federal agencies for acquiring effective and trustworthy AI in a timely, cost-effective manner, and rescinds and replaces earlier memorandum M-24-18.	verified source-guide; annotation metadata, not claim verification
[ageint073]	SolarWinds Supply Chain Attack - Fortinet	This Fortinet cybersecurity glossary page provides educational material about the SolarWinds supply chain attack. It explains how attackers compromised SolarWinds' Orion monitoring software with malicious code that spread to roughly 18,000 customers through software updates beginning in early 2020, and notes the attack's extended timeline and impact on U.S. federal agencies and major companies.	verified source-guide; annotation metadata, not claim verification
[ageint074]	How to Protect Against a Supply Chain Compromise - Vectra AI	A Vectra AI blog post from April 2024 analyzing the XZ Utils backdoor, a malicious commit discovered on March 29, 2024 in a widely used open-source compression library that could compromise affected systems via SSH. The article frames the incident as a supply chain compromise affecting both open-source and commercial software, drawing comparison to SolarWinds.	verified source-guide; annotation metadata, not claim verification
[ageint075]	The Xz-Utils Backdoor: The Supply Chain RCE That Got Caught	An Invicti Security blog post from April 2024 analyzing the xz-utils backdoor, a software supply chain compromise discovered in versions 5.6.0 and 5.6.1 of the compression library. It describes how malicious code was hidden in test files and assembled only during compilation, potentially enabling unauthenticated remote code execution via OpenSSH, and how a long-term contributor gradually gained maintainer trust before inserting it.	verified source-guide; annotation metadata, not claim verification
[ageint076]	XZ Utils backdoor	In early 2024, a malicious backdoor was discovered embedded in XZ Utils, a widely used compression library in Linux distributions, designed to enable unauthorized remote code execution via OpenSSH using an Ed448 private key. The perpetrator, operating under the pseudonym Jia Tan, spent over two years building trust as a contributor before inserting the exploit, which received a maximum CVSS score of 10.0.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[Hahn et al., 2026]	An Evidence-Driven Analysis of Threat Information Sharing	An arXiv preprint, version 3 dated 27 January 2026. Its abstract and introduction describe three incident reviews, 196 procedure examples across 79 ATT&CK techniques and 22 ICS-related malware families, and nine vulnerability advisories. The authors analyze representation and technical-detail limitations in that corpus using automated observable extraction; this is not a field evaluation proving that ICS information sharing generally remains ineffective.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint300]	MITRE ATLAS	MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy.	original source-guide; annotation metadata, not claim verification

[ageint306]	Artificial Intelligence	Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 22; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

22.3.4 Supply Chain Intelligence Attacks governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 22.

22.3.5 Supply Chain Intelligence Attacks analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 14's governance-boundary section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. [ageint258]; [ageint266].

Curriculum topic spine: Supply Chain Operations as Strategic Intelligence Tradecraft, **SolarWinds/SUNBURST: The Six-Month Patient Operation**, **XZ Utils maintainer-trust case review for software supply-chain governance**. **Recorded source cluster; inspection and scope limits apply:** [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]; [Cybersecurity and Infrastructure Security Agency, 2026d]; [National Institute of Standards and Technology, 2025c]; [Organisation for Economic Co-operation and Development, 2025a].

Conceptual depth: turning indicators, TTPs, incidents, vendor risk, and response lessons into shareable defensive intelligence with clear handling rules.

Method stack: threat-information sharing goals, indicator/TTP normalization, incident-response review, supply-chain risk assessment, and lessons learned.

Composability contract: indicators, TTP mappings, affected assets, supplier evidence, response actions, and sharing constraints remain independently reusable.

Known failure modes: indicator fixation, unvetted sharing, vendor-assurance drift, weak incident scoping, and treating CTI as a feed instead of a workflow.

Defensive boundary: cyber material stays defensive and tabletop-based; it does not provide exploit, persistence, evasion, or live-response instructions. Applied to **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

Anchor	Why it matters here
[National Institute of Standards and Technology, 2016]	Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2025]	OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings. Checked as of 2026-05-21; role: curriculum_anchor.
[OASIS Cyber Threat Intelligence Technical Committee, 2021]	OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED. Checked as of 2026-11-06; role: curriculum_anchor.
[MITRE, 2026b]	Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization. Checked as of 2026-05-21; role: curriculum_anchor.
[Cybersecurity and Infrastructure Security Agency, 2026d]	Official catalog for prioritizing known exploited vulnerabilities as defensive triage inputs, not as exploitation instructions. Checked as of 2026-05-21; role: curriculum_anchor.
[National Institute of Standards and Technology, 2025c]	Official incident-response profile for preparation, detection, response, recovery, and continuous improvement under CSF 2.0. Checked as of 2026-05-21; role: curriculum_anchor.
[Organisation for Economic Co-operation and Development, 2025a]	OECD policy paper proposing a common AI incident reporting framework for jurisdictions and sectors, including criteria for impact and risk characterization. Checked as of 2026-08-30; role: curriculum_anchor.

22.3.5.1 Supply Chain Intelligence Attacks evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint258]; [ageint266].

22.3.6 Supply Chain Intelligence Attacks agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 22.

AGEINT translation is bounded by the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.6.1 Supply Chain Intelligence Attacks permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 22.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.6.2 Supply Chain Intelligence Attacks excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint258]; [ageint266] and **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

22.3.7 Supply Chain Intelligence Attacks governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 22.
Governance is practiced as a gate on the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** lane. Learners use the **Software-Supply-Chain Assurance Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.7.1 Supply Chain Intelligence Attacks governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint258]; [ageint266].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** failure modes and the **Software-Supply-Chain Assurance Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

22.3.7.2 Supply Chain Intelligence Attacks evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Software-Supply-Chain Assurance Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.7.3 Supply Chain Intelligence Attacks current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. [ageint258]; [ageint266].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_nist_sp_800_150` for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**?	Guide to Cyber Threat Information Sharing, NIST SP 800-150; lane `cyber_threat_intelligence`; checked 2026-05-21.	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps; Official guidance for establishing threat-information sharing goals, communities, distribution rules, and defensive use of indicators and TTPs.
What does the module inherit from `official_oasis_stix_21` for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**?	STIX Version 2.1; lane `cyber_threat_intelligence`; checked 2026-05-21.	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps; OASIS CTI standard for expressing cyber threat and observable information with structured objects, relationships, sightings, and markings.
What does the module inherit from `official_oasis_taxii_21` for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**?	TAXII Version 2.1; lane `cyber_threat_intelligence`; checked 2026-11-06.	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps; OASIS CTI exchange standard specifying request-response Collections, discovery, API roots, and API contracts. Section 1.6 describes the publish-subscribe Channel concept but explicitly excludes Channel services from this version; section 6 is RESERVED.
What does the module inherit from `official_mitre_attack_enterprise` for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**?	MITRE ATT&CK Enterprise Matrix; lane `cyber_threat_intelligence`; checked 2026-05-21.	software-supply-chain assurance packet with package provenance, maintainer-risk notes, build-integrity evidence, and control gaps; Threat-informed enterprise matrix for defensive TTP mapping, coverage analysis, detection engineering, and analytic normalization.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 22; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

22.3.8 Supply Chain Intelligence Attacks assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 22.

22.3.9 Supply Chain Intelligence Attacks assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 22.

22.3.9.1 Supply Chain Intelligence Attacks capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation** and [ageint258]; [ageint266].

22.3.9.2 Supply Chain Intelligence Attacks instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation** and [ageint258]; [ageint266].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

22.3.9.3 Supply Chain Intelligence Attacks assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Supply Chain Operations as Strategic Intelligence Tradecraft; **SolarWinds/SUNBURST: The Six-Month Patient Operation**; **XZ Utils maintainer-trust case review for software supply-chain governance**; **Maintainer-contact provenance review for software supply-chain governance**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: separate provenance evidence, social-trust signals, build controls, vulnerability claims, and attribution uncertainty.
CVE-2024-3094: CVSS 10.0 Backdoor Mechanism; **Attribution Limits: The Inherited APT29/SVR Similarity Hypothesis**; **Interaction Style Is Not an Attribution Signature**; **Maintainer-risk escalation review for software supply-chain governance**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
Countermeasures: SBOM, SLSA Framework, Sigstore; **Threat Intelligence Sharing for ICS Supply Chain (arXiv Survey)**	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude exploit reproduction, maintainer targeting, backdoor mechanics, credential hunting, and live repository interference.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

22.3.10 Supply Chain Intelligence Attacks refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint258]; [ageint266] and **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**.

22.3.10.1 Supply Chain Intelligence Attacks refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. The local signals begin with [ageint258]; [ageint266].

22.3.10.2 Supply Chain Intelligence Attacks claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**, and the source spine for these checks begins with [ageint258]; [ageint266].

22.3.11 Supply Chain Intelligence Attacks reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint258]; [ageint266].

Contextual source routes. For module 14's review-checklist section, the **Cyber Threat Intelligence, Incident Response, and Supply-Chain Defense** catalog routes include [National Institute of Standards and Technology, 2016]; [OASIS Cyber Threat Intelligence Technical Committee, 2025]; [OASIS Cyber Threat Intelligence Technical Committee, 2021]; [MITRE, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation**. [ageint258]; [ageint266].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

22.3.12 Supply Chain Intelligence Attacks learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **Supply Chain Operations as Strategic Intelligence Tradecraft; SolarWinds/SUNBURST: The Six-Month Patient Operation** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint258]; [ageint266].

Section 2, Section 19, Section 21, Section 23

23 Electronic and Emanations Intelligence

23.0.1 Electronic and Emanations Intelligence figures and course links: visual evidence, source flow, and navigation

The module uses Figure 57 and Figure 52 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 19, Section 22, Section 24.
This module teaches the **Collection Management and Multi-INT Requirements Discipline** lane through a bounded, source-backed coursebook chapter. [ageint255]; [ageint256].

23.1 Collection Management and Multi-INT Requirements Discipline frame for Electronic and Emanations Intelligence: source context, topic focus, and reader task

Navigation. Parent section: Section 23.

23.1.1 Electronic and Emanations Intelligence orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 23.

23.1.2 Electronic and Emanations Intelligence conceptual primer: source context, core model, and reader task

This chapter teaches collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.
The central distinction is to separate collection discipline concepts from operational recruitment, interception, or tasking procedures. Core topics include **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise; Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint255]; [ageint256].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **SIGINT legal-authority and communications-security governance exercise** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

23.1.3 Electronic and Emanations Intelligence learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 23.

- Connect **SIGINT legal-authority and communications-security governance exercise and EMINT: SIGINT legal-authority and communications-security governance exercise** to **Collection Management and Multi-INT Requirements Discipline** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures.

23.1.4 Electronic and Emanations Intelligence core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 23.

Term	Working definition
Priority	the relative importance of an intelligence question
Source discipline	a broad evidence channel such as HUMINT, SIGINT, GEOINT, OSINT, or FININT
Minimization	the rule that limits acquisition, retention, or use of unnecessary information
Source protection	the duty to reduce risk to people, methods, and sensitive relationships
Evaluation	the feedback step that tests whether the evidence satisfied the requirement
Gray-zone indicator	an observed feature potentially relevant to ambiguous coercion; neither coercive intent nor an armed-conflict threshold follows from the label
Proxy pattern	a relationship pattern that may motivate a sponsorship hypothesis but does not establish sponsorship, direction, or operational control

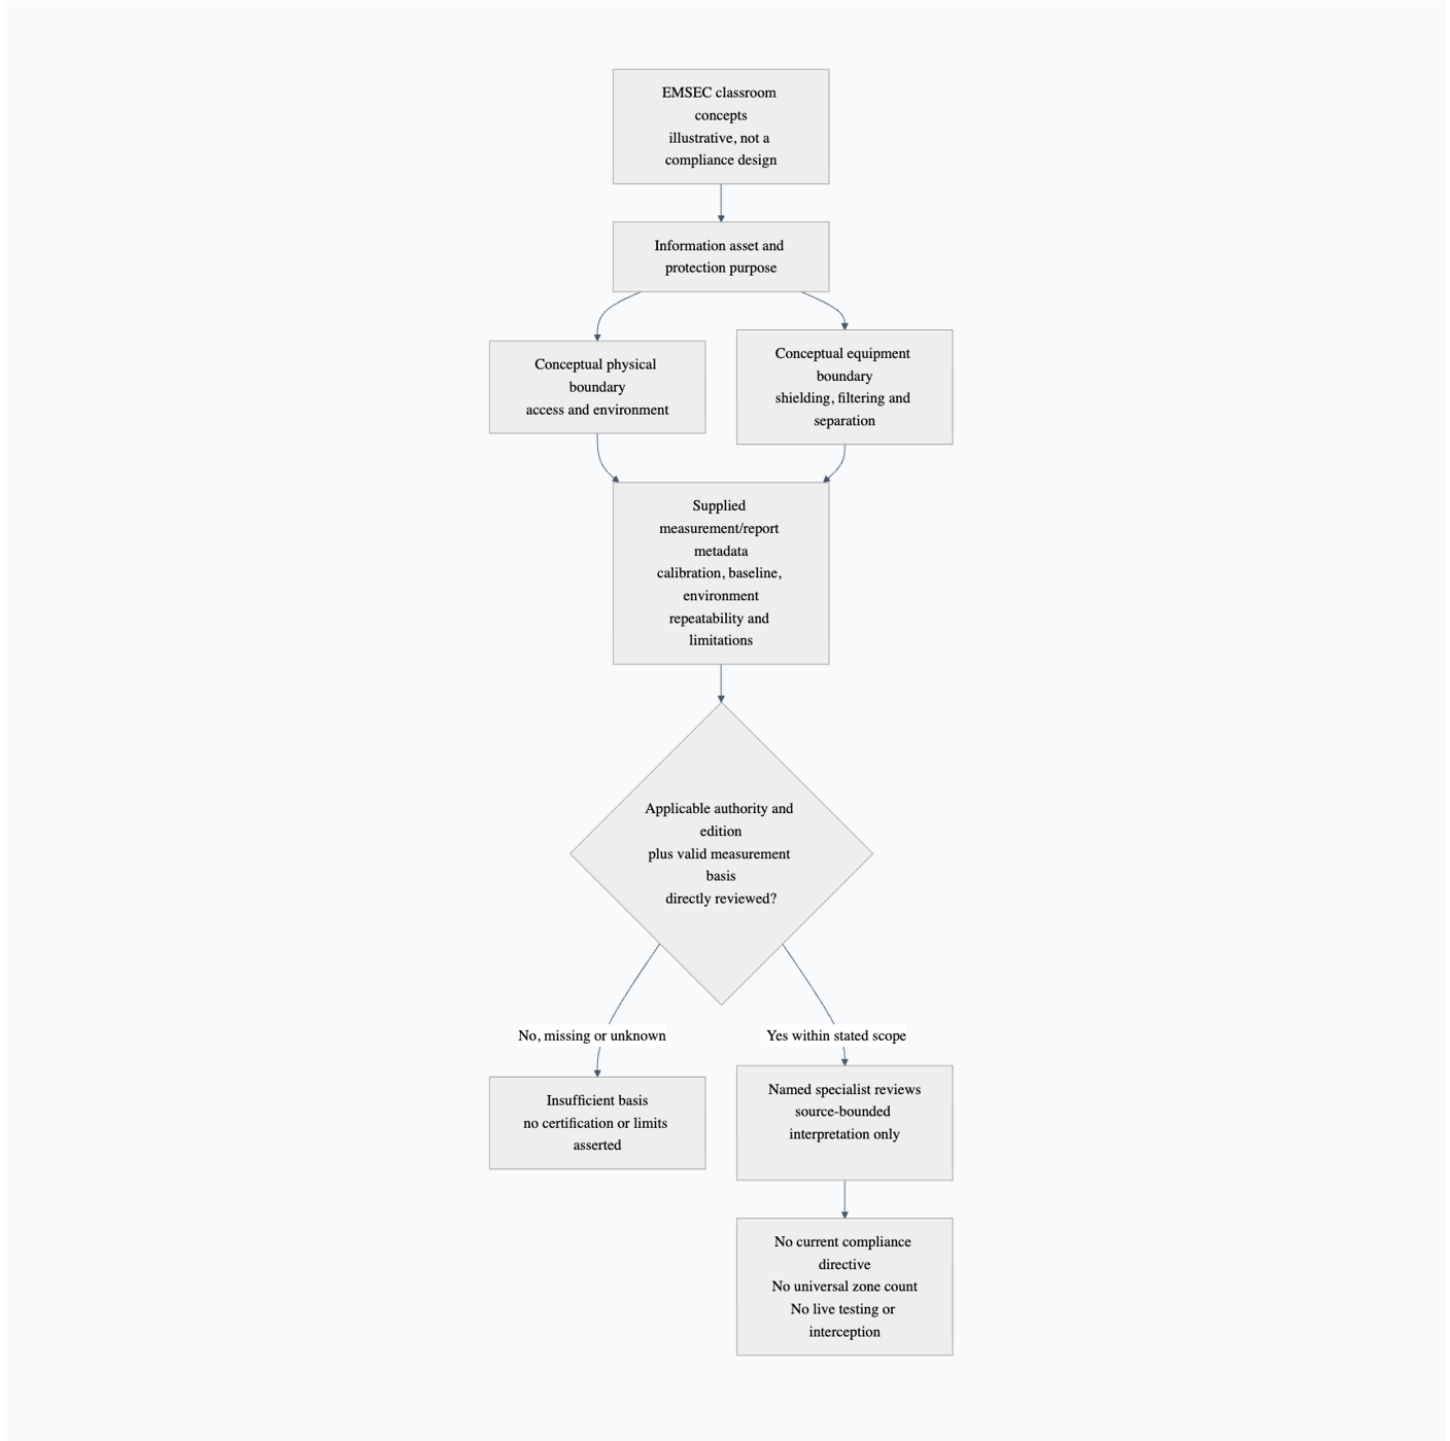

Figure 57: This author-defined illustration introduces protective EMSEC concepts, not a prescribed three-zone layout, current TEMPEST standard, or accreditation procedure. Any compliance claim depends on a directly reviewed authority, edition, applicability, equipment scope, and valid measurement evidence. Historical public material supplies context only; absent those records, the classroom outcome is insufficient basis—not certified equipment or approved emission limits. No interception or live testing is authorized.

23.2 Requirements-to-Evidence Lens path for Electronic and Emanations Intelligence: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 23.

23.2.1 Electronic and Emanations Intelligence practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 23.

23.2.2 Electronic and Emanations Intelligence topic lessons: source-backed concepts and transfer tasks

Electronic and Emanations Intelligence builds collection management as requirements discipline: a source method is considered only after the priority, authority, minimization rule, source risk, and evaluation plan are explicit. The sequence opens with **SIGINT legal-authority and communications-security governance exercise**, **EMINT: SIGINT legal-authority and communications-security governance exercise**, **Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 52; module overview Section 23; curriculum atlas Section 2.

Contextual source routes. For module 15's topic-lessons section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

23.2.2.1 Lesson 1: SIGINT legal-authority and communications-security governance exercise

Concept. SIGINT legal-authority and communications-security governance exercise frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. ELINT concerns non-communications electromagnetic signals, while a measured feature set and an identification of a particular system are separate claims. Frequency, timing or amplitude patterns can overlap across emitters and depend on sensor calibration, sampling and observation geometry. A classroom label is a hypothesis about supplied synthetic measurements, not evidence of a real weapons system, operator or location; no reception or live collection is authorized.

Why it matters. Without explicit treatment of **SIGINT legal-authority**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **SIGINT legal-authority and communications-security governance exercise**: [ageint035]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **SIGINT legal-authority**, inspect the original passages. No displayable curriculum annotation is available for [ageint035]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **SIGINT legal-authority**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **SIGINT legal-authority and communications-security governance**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **SIGINT legal-authority** work as a **defensive CTI evidence packet** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **SIGINT legal-authority**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **SIGINT legal-authority** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

23.2.2.2 Lesson 2: EMINT: SIGINT legal-authority and communications-security governance exercise

Concept. EMINT: SIGINT legal-authority and communications-security governance exercise frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. The inherited EMINT abbreviation and C4I label require an explicit source-specific definition; do not treat the broad criminal-investigations book listing as an authoritative technical taxonomy. Distinguish intentional emissions from unintended emanations and detection of energy from recoverable information. This source set does not establish recoverability, performance or a system-specific leakage claim, so those remain unknown rather than inviting interception or reconstruction.

Why it matters. Without explicit treatment of **EMINT: SIGINT legal-authority and communications-security governance exercise**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **EMINT: SIGINT legal-authority and communications-security governance exercise**: [ageint078]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **EMINT: SIGINT legal-authority and communications-security governance exercise**, inspect the original passages. Curriculum annotation for [ageint078]: A Barnes & Noble listing for Advanced Criminal Investigations and Intelligence Operations by Robert J. Girod. The book examines tradecraft, defined as the methods, practices, and techniques used in espionage and clandestine investigations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **EMINT**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **EMINT**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **EMINT: SIGINT legal-authority and communications-security governance exercise** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **EMINT: SIGINT legal-authority and communications-security governance exercise**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Apply this module's safe boundary for **EMINT: SIGINT legal-authority and communications-security governance exercise** to another artifact while keeping requirements decomposition and source-discipline fit and reviewer ownership explicit.

23.2.2.3 Lesson 3: Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise **Concept. Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise** frames SIGINT as authority-bound collection with minimization, handling rules, and communications-security implications.

Worked reasoning and limits. TEMPEST is associated with compromising-emanations protection, whereas 'Van Eck' names a class of historical emanation demonstrations; neither term establishes that a particular device leaks usable content. The inherited ATLAS and software-assurance references do not specify applicable emanation limits, certification procedures or tested countermeasure performance. Keep this a conceptual distinction: current thresholds and efficacy remain unsupported, and there is no signal capture, content reconstruction or bypass exercise.

Why it matters. Without explicit treatment of **Tempest and Van Eck Radiation**, opportunistic collection undermines requirements decomposition and source-discipline fit review; the lesson builds the habit to separate collection discipline concepts from operational recruitment, interception, or tasking procedures.

Source support. Inherited source-guide context for **Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise**: [ageint300], [ageint303], and [ageint304]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **Tempest and Van Eck Radiation**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Tempest and Van Eck Radiation**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **Tempest and Van Eck Radiation**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **Tempest and Van Eck Radiation** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Tempest and Van Eck Radiation**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **Tempest and Van Eck Radiation** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

23.2.2.4 Lesson 4: RF-spectrum governance and communications-security **Concept. RF-spectrum governance and communications-security** connects the technical term to authority, minimization, communications-security risk, and public doctrine rather than interception mechanics.

Worked reasoning and limits. SDR moves some radio-processing functions into software; it does not remove the limits of hardware bandwidth, calibration or sampling. In a completed synthetic table, bins 1–4 contain powers [2, 2, 8, 2] arbitrary units and a supplied comparison rule flags values above 5; the transformation flags bin 3 only. A calibration row adds a +6-unit instrument offset to bin 3, so offset correction yields [2, 2, 2, 2] and withdraws the apparent anomaly; without that row the cause is unknown, not an identified emitter. Duplicating the same table is no corroboration, and removing calibration stops attribution; the attached software-assurance sources do not validate SDR performance, and all work is arithmetic on fictional records, without hardware, reception or transmission.

Why it matters. RF-spectrum governance matters in the **Collection Management and Multi-INT Requirements Discipline** lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **RF-spectrum governance and communications-security**: [ageint303], [ageint304], and [ageint305]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **RF-spectrum governance**, inspect the original passages. Curriculum annotation for [ageint303]: An official NIST page on software supply chain security issued under Executive Order 14028, focused on the Software Bill of Materials as a formal record of software components and their supply chain. It explains the benefits of SBOMs for vulnerability identification and supply-chain transparency, recommends machine-readable formats such as SPDX, CycloneDX, and SWID, and describes foundational, sustaining, and enhancing levels of implementation. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. Curriculum annotation for [ageint305]: Official NIST NCCoE DevSecOps project page for software factory, secure pipeline, and continuous authorization source support. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **RF-spectrum governance**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape the same topic work as a **defensive CTI evidence packet** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **RF-spectrum governance**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **RF-spectrum governance** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

23.2.2.5 Lesson 5: RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security **Concept. RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security** connects the technical term to authority, minimization, communications-security risk, and public doctrine rather than interception mechanics.

Worked reasoning and limits. An RF map represents measurements at sampled positions and times under declared equipment settings; interpolation is a derived estimate, not an observation at every pixel. Missing samples, multipath and instrument bias can produce a pattern without locating an emitter, and repetition with one miscalibrated instrument need not supply independent confirmation. In a fictional grid, cells A/B have values 2/8 but B alone lacks a calibration record and was recorded in a different environment, so a spatial comparison stops at 'not comparable' rather than an emitter claim. The NGA mission page and analytic standards do not establish propagation parameters or geolocation accuracy; no real services, reception, decoding or persons are mapped.

Why it matters. RF Mapping and Spectrum Intelligence matters in the **Collection Management and Multi-INT Requirements**

Discipline lane because requirements decomposition and source-discipline fit evidence must stay separate from judgment; opportunistic collection is a common failure.

Source support. Inherited source-guide context for **RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c].

Evidence to inspect. For **RF Mapping and Spectrum Intelligence**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **RF Mapping and Spectrum Intelligence**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this requirements decomposition and source-discipline fit topic. The artifact must state the authority descriptor, the bounded claim about **RF Mapping and Spectrum Intelligence**, the minimization caveat, the uncertainty note, the collection boundary, and the reviewer accountable for the authorization. Shape **RF Mapping and Spectrum Intelligence** work as a **defensive CTI evidence packet** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **RF Mapping and Spectrum Intelligence**: that a named collection authority removes the minimization and retention limits on what may be kept.

Transfer task. Transfer **RF Mapping and Spectrum Intelligence** from this module to a second motif by preserving requirements decomposition and source-discipline fit, replacing action with audit, and naming the blocked use.

23.2.3 Electronic and Emanations Intelligence worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic policy cell compares public indicators of hybrid pressure against an approved collection plan for a benign border-disruption exercise. [ageint255]; [ageint256].

Contextual source routes. For module 15's worked-example section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **defensive cyber intelligence normalization**. Learners use a **defensive CTI evidence packet** and keep this boundary visible: No exploit, persistence, evasion, scanning, or production response instructions.

Frame. The classroom question centers on **SIGINT legal-authority and communications-security governance exercise**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **SIGINT legal-authority and communications-security governance exercise** scenario, use a fictional freight-delay notice, a weather bulletin, interview H1 reporting the delay and H2 repeating H1, two toy signals absent during receiver downtime, and a scope card permitting only these supplied records. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **SIGINT legal-authority and communications-security governance exercise**, students first rank the question about disruption above the unsupported sponsorship allegation; then match each gap to a source discipline without tasking it, distinguish interview access and motivation from accuracy, and separate signal absence from collection authority; remove H2 and compare a second toy signal lost during downtime as controls. Stop any proposed contact or interception and send missing authority or evidence questions to the instructor. Pause whenever an inference about SIGINT legal-authority and communications-security governance exercise appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a requirements matrix recording disruption reports but unresolved cause and sponsorship, one underlying interview account rather than two independent sources, and an uninterpretable transmitter state during receiver downtime; no human contact, expanded collection, or signal observation confers authority Retain it as the **defensive CTI evidence packet** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **SIGINT legal-authority and communications-security governance exercise** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to requirements decomposition and source-discipline fit, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **SIGINT legal-authority and communications-security governance exercise** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

23.2.4 Electronic and Emanations Intelligence practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

Contextual source routes. For module 15's practice-sequence section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare SIGINT legal-authority and communications-security governance exercise, EMINT: SIGINT legal-authority and communications-security governance exercise, Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Collection Management and Multi-INT Requirements Discipline** lane.

Move	Learner action	Output	Check
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for SIGINT legal-authority and communications-security governance exercise: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the defensive CTI evidence packet fields for SIGINT legal-authority and communications-security governance exercise.	Unit profile note.	Evidence artifacts include indicator context, TTP mapping.
4. Challenge	Test the misconception that a named collection authority removes the minimization and retention limits on what may be kept.	Failure-mode note.	The artifact applies the key distinction: separate collection discipline concepts from operational recruitment, interception, or tasking procedures.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

23.2.4.1 Electronic and Emanations Intelligence instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint256].

23.2.4.2 Electronic and Emanations Intelligence extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 23.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.2.5 Electronic and Emanations Intelligence knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 23.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **SIGINT legal-authority and communications-security governance exercise**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **SIGINT legal-authority and communications-security governance exercise** to the final topic, **RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Collection Management and Multi-INT Requirements Discipline** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which gray-zone indicator changes the least-intrusive source choice without crossing into operational tasking?
5. Correct this misconception: that a named collection authority removes the minimization and retention limits on what may be kept.

23.2.5.1 Electronic and Emanations Intelligence answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **SIGINT legal-authority and communications-security governance exercise** without source evidence, uncertainty, or a safe transfer task.

23.3 Electronic and Emanations Intelligence assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 23.

23.3.1 Electronic and Emanations Intelligence evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 23.

23.3.2 Electronic and Emanations Intelligence transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 23.

23.3.2.1 Electronic and Emanations Intelligence lineage and source tradition: profile, concepts, and first anchors This sits in the **Collection Management and Multi-INT Requirements Discipline** lineage: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. [ageint255]; [ageint256].

23.3.2.2 Electronic and Emanations Intelligence working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 23.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**, with provenance and reviewability throughout.

23.3.2.3 Electronic and Emanations Intelligence knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** accountable requirements, source-discipline choices, minimization rules, source-risk notes, and evaluation criteria. [ageint255]; [ageint256].
- **Transforms:** priority mapping, source-discipline fit, least-intrusive evidence selection, and feedback review.
- **Outputs:** requirements matrix, collection-limit note, source-quality card, and gap list.
- **Failure modes:** recruitment or interception drift, over-collection, weak minimization, and source exposure.

23.3.2.4 Electronic and Emanations Intelligence transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 23.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.
- **Evidence contract:** keep the **Collection Management and Multi-INT Requirements Discipline** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as requirements matrix, collection-limit note, source-quality card, and gap list that another reviewer can audit.

23.3.2.5 Electronic and Emanations Intelligence profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 23.

The matched profile emphasizes requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit. The method stack is priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop; the local topic cluster is **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.3 Electronic and Emanations Intelligence evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 23.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Collection Management and Multi-INT Requirements Discipline** profile tells reviewers what evidence is strong enough for the module artifact built around **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.3.1 Electronic and Emanations Intelligence guide source spine: inherited keys and local citation roles Primary guide citations: [ageint255]; [ageint256]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint078]; [ageint300]; [ageint303]; [ageint304]; [ageint305]; [ageint302]; [ageint297].

23.3.3.2 Electronic and Emanations Intelligence verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint255]; [ageint256].

Tier	What counts	How it is used
Source guide	[ageint255]; [ageint256]; [ageint261]; [ageint279]; [ageint282]; [ageint284]; [ageint289]; [ageint291]; [ageint296]; [ageint035]; [ageint078]; [ageint300]; [ageint303]; [ageint304]; [ageint305]; [ageint302]; [ageint297].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 15's source-canon section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint256], but only directly verified source URLs are encoded as citations.

23.3.3.3 Electronic and Emanations Intelligence intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint256].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

23.3.3.4 Electronic and Emanations Intelligence runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 23.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	15.99	15.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Electronic and Emanations Intelligence to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	15.101	15.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Electronic and Emanations Intelligence	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	15.102	15.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Electronic and Emanations Intelligence	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
SIGINT legal-authority and communications-security governance exercise	15.1	15.1 source title transformed into safe curriculum treatment; original: ELINT: Radar Signatures and Weapons Systems Emissions	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	15.2	15.2 source title transformed into safe curriculum treatment; original: EMINT: C4I System Emanations	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
SIGINT legal-authority and communications-security governance exercise	15.3	15.3 source title transformed into safe curriculum treatment; original: Tempest and Van Eck Radiation: Standards and Countermeasures	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF-spectrum governance and communications-security	15.4	15.4 source title transformed into safe curriculum treatment; original: Software-Defined Radio (SDR) for Intelligence Applications	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF-spectrum governance and communications-security	15.5	15.5 source title transformed into safe curriculum treatment; original: RF Mapping and Spectrum Intelligence	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

23.3.3.5 Electronic and Emanations Intelligence reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 23.

Lesson topic	Practice lens	Evidence artifact	Safety check
SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
EMINT: SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF-spectrum governance and communications-security	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

23.3.3.6 Electronic and Emanations Intelligence annotated source ledger: real titles and local contribution Each source cited by this **Collection Management and Multi-INT Requirements Discipline** module is paired below with its real title and a one-line note on what it contributes to **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

Source	Cited work	Curriculum annotation	Status
[ageint255]	Web of Things (WoT) Architecture 1.1	The W3C Recommendation for Web of Things Architecture 1.1, published in December 2023, defining an abstract architecture for interoperability across diverse Internet of Things platforms. It introduces core concepts including Things described by machine-readable Thing Descriptions, reusable Thing Models, and Consumers that interpret descriptions to interact via Properties, Actions, and Events.	verified source-guide; annotation metadata, not claim verification
[ageint256]	Web of Things (WoT) Thing Description 1.1	The W3C WoT Thing Description 1.1 is a formal information model and standardized representation format enabling IoT devices to describe their metadata and interaction capabilities in a machine-readable way, facilitating interoperability across diverse ecosystems.	verified source-guide; annotation metadata, not claim verification
[ageint261]	RFC 9110: HTTP Semantics	RFC 9110, the official IETF standards document defining the core semantics and architecture of HTTP, published in June 2022 and consolidating nine earlier RFCs. It establishes terminology and protocol aspects shared across HTTP versions, including methods, status codes, header fields, content negotiation, conditional and range requests, authentication, and the http and https URI schemes.	verified source-guide; annotation metadata, not claim verification
[ageint279]	Open Contracting Data Standard	The documentation homepage for the Open Contracting Data Standard, version 1.1.5, maintained by the Open Contracting Partnership to support disclosure of government contracting data across the procurement lifecycle. It provides a common data model spanning planning, tender, award, contract, and implementation stages, along with a primer, implementation guidance, technical schemas, and validation tooling.	verified source-guide; annotation metadata, not claim verification
[ageint282]	AI Research: Security and Resilience	A NIST page on AI research focused on security and resilience, framing these as core characteristics of trustworthy AI under the NIST AI Risk Management Framework.	verified source-guide; annotation metadata, not claim verification
[ageint284]	Verifiable Credential Data Integrity 1.0	The W3C Recommendation for Verifiable Credential Data Integrity 1.0, published May 2025, defining mechanisms for ensuring the authenticity and integrity of verifiable credentials using cryptographic proofs. It specifies a process of data transformation, hashing, and proof generation, and a corresponding verification procedure, along with a proof data model containing properties such as type, verification method, purpose, and proof value.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint289]	Guidance for Organisations Using the Algorithmic Transparency Recording Standard	This is a GOV.UK guidance page published by the Government Digital Service that instructs public sector organizations on completing the Algorithmic Transparency Recording Standard (ATRS) template and publishing their records to the GOV.UK repository. It applies both to central government bodies required to publish under mandatory policy and to other public sector bodies doing so voluntarily.	verified source-guide; annotation metadata, not claim verification
[ageint291]	Revised 508 Standards and 255 Guidelines	Official documentation from the U.S. Access Board on the Revised 508 Standards and 255 Guidelines for information and communication technology accessibility. It establishes mandatory accessibility requirements for federal agencies and voluntary guidelines for telecommunications manufacturers, covering hardware, software, websites, electronic documents, and support services.	verified source-guide; annotation metadata, not claim verification
[ageint296]	Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile	NIST AI 600-1, the Artificial Intelligence Risk Management Framework: Generative Artificial Intelligence Profile, a cross-sectoral companion resource to the NIST AI RMF 1.0 issued pursuant to Executive Order 14110. It identifies risks that are unique to or amplified by generative AI and organizes suggested actions for managing those risks, mapped to the AI RMF functions.	verified source-guide; annotation metadata, not claim verification

[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 23; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

23.3.4 Electronic and Emanations Intelligence governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 23.

23.3.5 Electronic and Emanations Intelligence analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 15's governance-boundary section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Collection Management and Multi-INT Requirements Discipline** for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint256].

Curriculum topic spine: SIGINT legal-authority and communications-security governance exercise, **EMINT: SIGINT legal-authority and communications-security governance exercise**, **Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise**. **Recorded source cluster; inspection and scope limits apply:** [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [National Archives and Records Administration, 1981]; [National Security Agency, 2026d]; [Office of the Director of National Intelligence, 2026d].

Conceptual depth: requirements-driven, authority-bounded collection where priorities, legal basis, minimization, source protection, and evaluation are explicit.

Method stack: priority mapping, requirement decomposition, source-discipline fit, coverage-gap review, legal-authority check, and collection-feedback loop.

Composability contract: requirements, authorities, source disciplines, collection notes, retention limits, caveats, and evaluation metrics remain separable.

Known failure modes: opportunistic collection, priority drift, over-collection, weak minimization, source exposure, and confusing availability with authority.

Defensive boundary: collection material remains doctrinal and governance-oriented; it does not teach recruitment, interception, surveillance, or tasking procedures. Applied to **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

Anchor	Why it matters here
[United States Intelligence Community, 2026]	Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026c]	Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Joint Chiefs of Staff, 2026]	Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[National Archives and Records Administration, 1981]	National Archives transcription of the historical EO 12333 text citing the December 4, 1981 order at 46 FR 59941. Its institutional structure includes the Director of Central Intelligence, including section 1.5; use for historical legal context, not current consolidated authority. The separate official_eo_12333_odni_text anchor identifies an ODNI edition amended through 2008; neither edition alone establishes exhaustive current law. Checked as of 2026-11-06; role: curriculum_anchor.
[National Security Agency, 2026d]	Official NSA public explanation of FISA oversight for signals intelligence collection governed by statutory and court-authorized controls. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.

23.3.5.1 Electronic and Emanations Intelligence evidence standard and citation floor: source families and discovery limits Official guidance supplies governance, safety, and legal constraints for the **Collection Management and Multi-INT Requirements Discipline** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint255]; [ageint256].

23.3.6 Electronic and Emanations Intelligence agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 23.

AGEINT translation is bounded by the **Collection Management and Multi-INT Requirements Discipline** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.6.1 Electronic and Emanations Intelligence permitted defensive utility: curriculum uses and safe outputs **Navigation.** Parent section: Section 23.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.6.2 Electronic and Emanations Intelligence excluded operational boundary: blocked actions and stop rules Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint255]; [ageint256] and **SIGINT legal-authority**

and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

23.3.7 Electronic and Emanations Intelligence governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 23.

Governance is practiced as a gate on the **Collection Management and Multi-INT Requirements Discipline** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.7.1 Electronic and Emanations Intelligence governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint255]; [ageint256].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Collection Management and Multi-INT Requirements Discipline** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

23.3.7.2 Electronic and Emanations Intelligence evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.7.3 Electronic and Emanations Intelligence current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint256].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_intelligence_gov_how_ic_works` for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**?	How the IC Works; lane `governed_intelligence_cycle`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official public explanation of the intelligence cycle, collection disciplines, dissemination, evaluation, oversight, and partners.
What does the module inherit from `official_odni_icd_204` for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**?	Intelligence Community Directive 204: National Intelligence Priorities Framework; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official prioritization directive for translating national intelligence priorities into collection, analysis, risk management, and responsiveness evaluation.
What does the module inherit from `official_joint_pub_2_0` for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**?	JP 2-0: Joint Intelligence; lane `collection_management`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official joint-doctrine landing page for the keystone publication on joint intelligence principles, products, services, and assessments.
What does the module inherit from `official_ic_osint_strategy` for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.

Assurance question	Direct source evidence	Chapter artifact
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 23; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

23.3.8 Electronic and Emanations Intelligence assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 23.

23.3.9 Electronic and Emanations Intelligence assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 23.

23.3.9.1 Electronic and Emanations Intelligence capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint256].

23.3.9.2 Electronic and Emanations Intelligence instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise** and [ageint255]; [ageint256].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

23.3.9.3 Electronic and Emanations Intelligence assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
SIGINT legal-authority and communications-security governance exercise; **EMINT: SIGINT legal-authority and communications-security governance exercise**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused.
Tempest and Van Eck Radiation: SIGINT legal-authority and communications-security governance exercise; **RF-spectrum governance and communications-security**	**Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support.
RF Mapping and Spectrum Intelligence: RF-spectrum governance and communications-security	**Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

23.3.10 Electronic and Emanations Intelligence refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint255]; [ageint256] and **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**.

23.3.10.1 Electronic and Emanations Intelligence refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. The local signals begin with [ageint255]; [ageint256].

23.3.10.2 Electronic and Emanations Intelligence claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**, and the source spine for these checks begins with [ageint255]; [ageint256].

23.3.11 Electronic and Emanations Intelligence reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint255]; [ageint256].

Contextual source routes. For module 15's review-checklist section, the **Collection Management and Multi-INT Requirements Discipline** catalog routes include [United States Intelligence Community, 2026]; [Office of the Director of National Intelligence, 2026c]; [Joint Chiefs of Staff, 2026]; [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise**. [ageint255]; [ageint256].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

23.3.12 Electronic and Emanations Intelligence learning-path links: module map, overview, and curriculum atlas

Follow the cross-links to move between **SIGINT legal-authority and communications-security governance exercise; EMINT: SIGINT legal-authority and communications-security governance exercise** and the rest of the curriculum without losing the source spine: orientation first, then the parent unit, then the modules on either side. Primary sources: [ageint255]; [ageint256].

Section 2, Section 19, Section 22, Section 24

24 IMAGERY AND FINANCIAL INTELLIGENCE

24.1 IMAGERY AND FINANCIAL INTELLIGENCE learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 24.

24.1.1 geospatial and financial intelligence uncertainty discipline spine: domain question and learning focus

Navigation. Parent section: Section 24.
This unit teaches **geospatial and financial intelligence uncertainty**. GEOINT and FININT lessons teach spatial, temporal, and entity-risk reasoning while preserving uncertainty and compliance boundaries.

24.1.2 geospatial and financial intelligence uncertainty source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 24.
Use NGA definition and official compliance or due-diligence anchors for location quality, source limits, sanctions, ownership, and escalation claims.

24.1.3 geospatial and financial intelligence uncertainty practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 24.
The recurring practice artifact is a **location-and-entity evidence ledger** that draws on geospatial quality note, temporal caveat, ownership uncertainty field, and escalation threshold. The unit keeps its learning spine explicit. Classroom packet: a fictional road segment is mapped with 100-metre positional uncertainty in a 2023 layer; a 2026 notice closes one of two nearby bridges. Supplier records contain two firms named Cedar with different registration IDs and an undated ownership field.

1. Normalize coordinate reference, spatial resolution, capture date, notice validity, entity IDs, and ownership dates.
2. Compare bridge footprints with the uncertainty area; join financial records by registration ID rather than name.
3. Swap the same-name firms as a negative control: name-only joins must fail, and the old map must not settle which bridge is affected.
4. Submit a location-and-entity ledger marking bridge identity unresolved, the two firms distinct, and current beneficial ownership unknown; neither spatial proximity nor a name match establishes wrongdoing. Stop before route advice, facility targeting, or a compliance conclusion. Hand geospatial ambiguity to the instructor's mapping reviewer and legal-status questions to the compliance reviewer.

24.1.4 geospatial and financial intelligence uncertainty safety boundary: accountable, synthetic, and evidence-bounded limits

No facility targeting, pattern-of-life inference, evasion advice, or attribution certainty beyond evidence.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint253]; [ageint269].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint253]; [ageint269].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint253]; [ageint269].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint253]; [ageint269].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Open-Source and Geospatial Intelligence Integrity. Core anchors: [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Conceptual focus: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable. **Practice lens:** Requirements-to-Evidence Lens; What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit? [ageint253]; [ageint269].

24.1.5 IMAGERY AND FINANCIAL INTELLIGENCE visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 58 and Figure 59 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 23, Section 25.

24.1.6 IMAGERY AND FINANCIAL INTELLIGENCE module roster and source-lane inventory: citations, lanes, and learner route

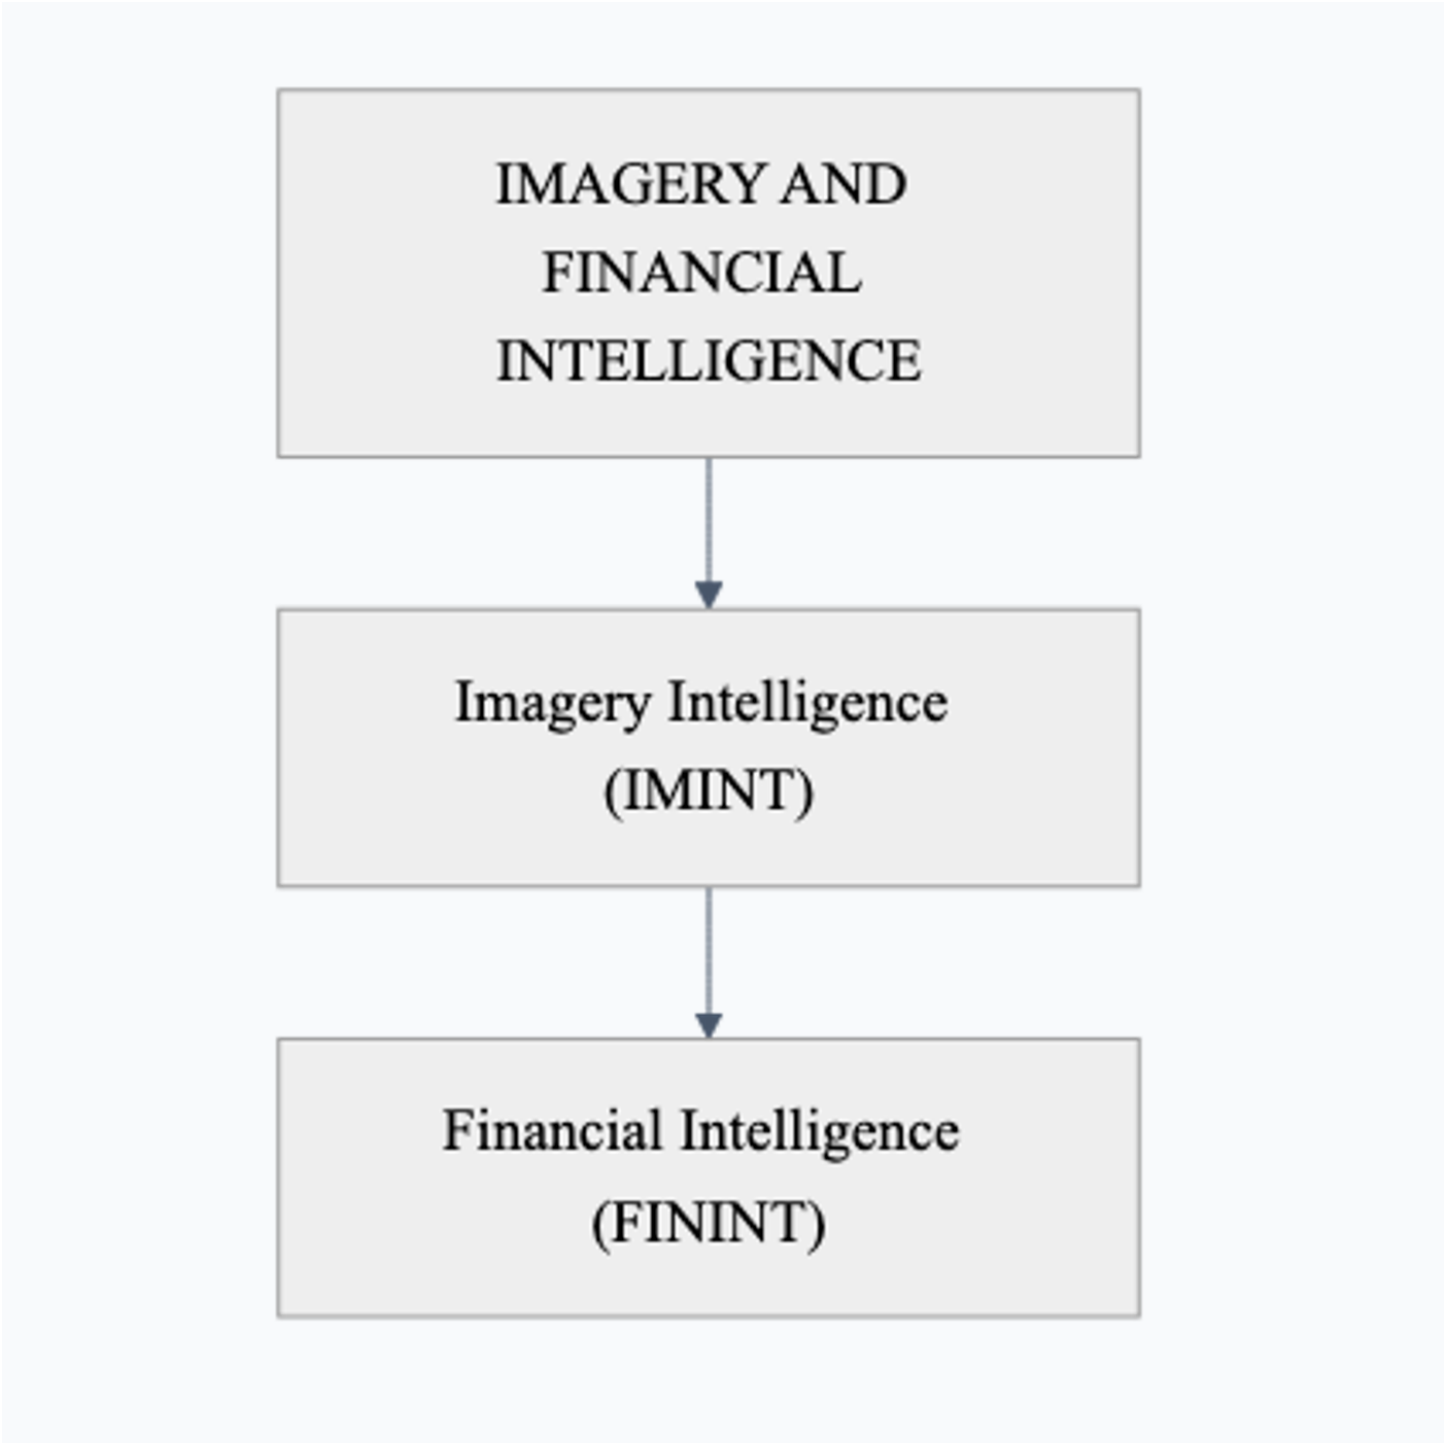

Figure 58: The IMAGERY AND FINANCIAL INTELLIGENCE module map traces the part's chapters as a linear reading sequence. Its reader value is to make 2 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last visible at a glance, with the imagery and financial intelligence section as the source section and defensive review as the boundary.

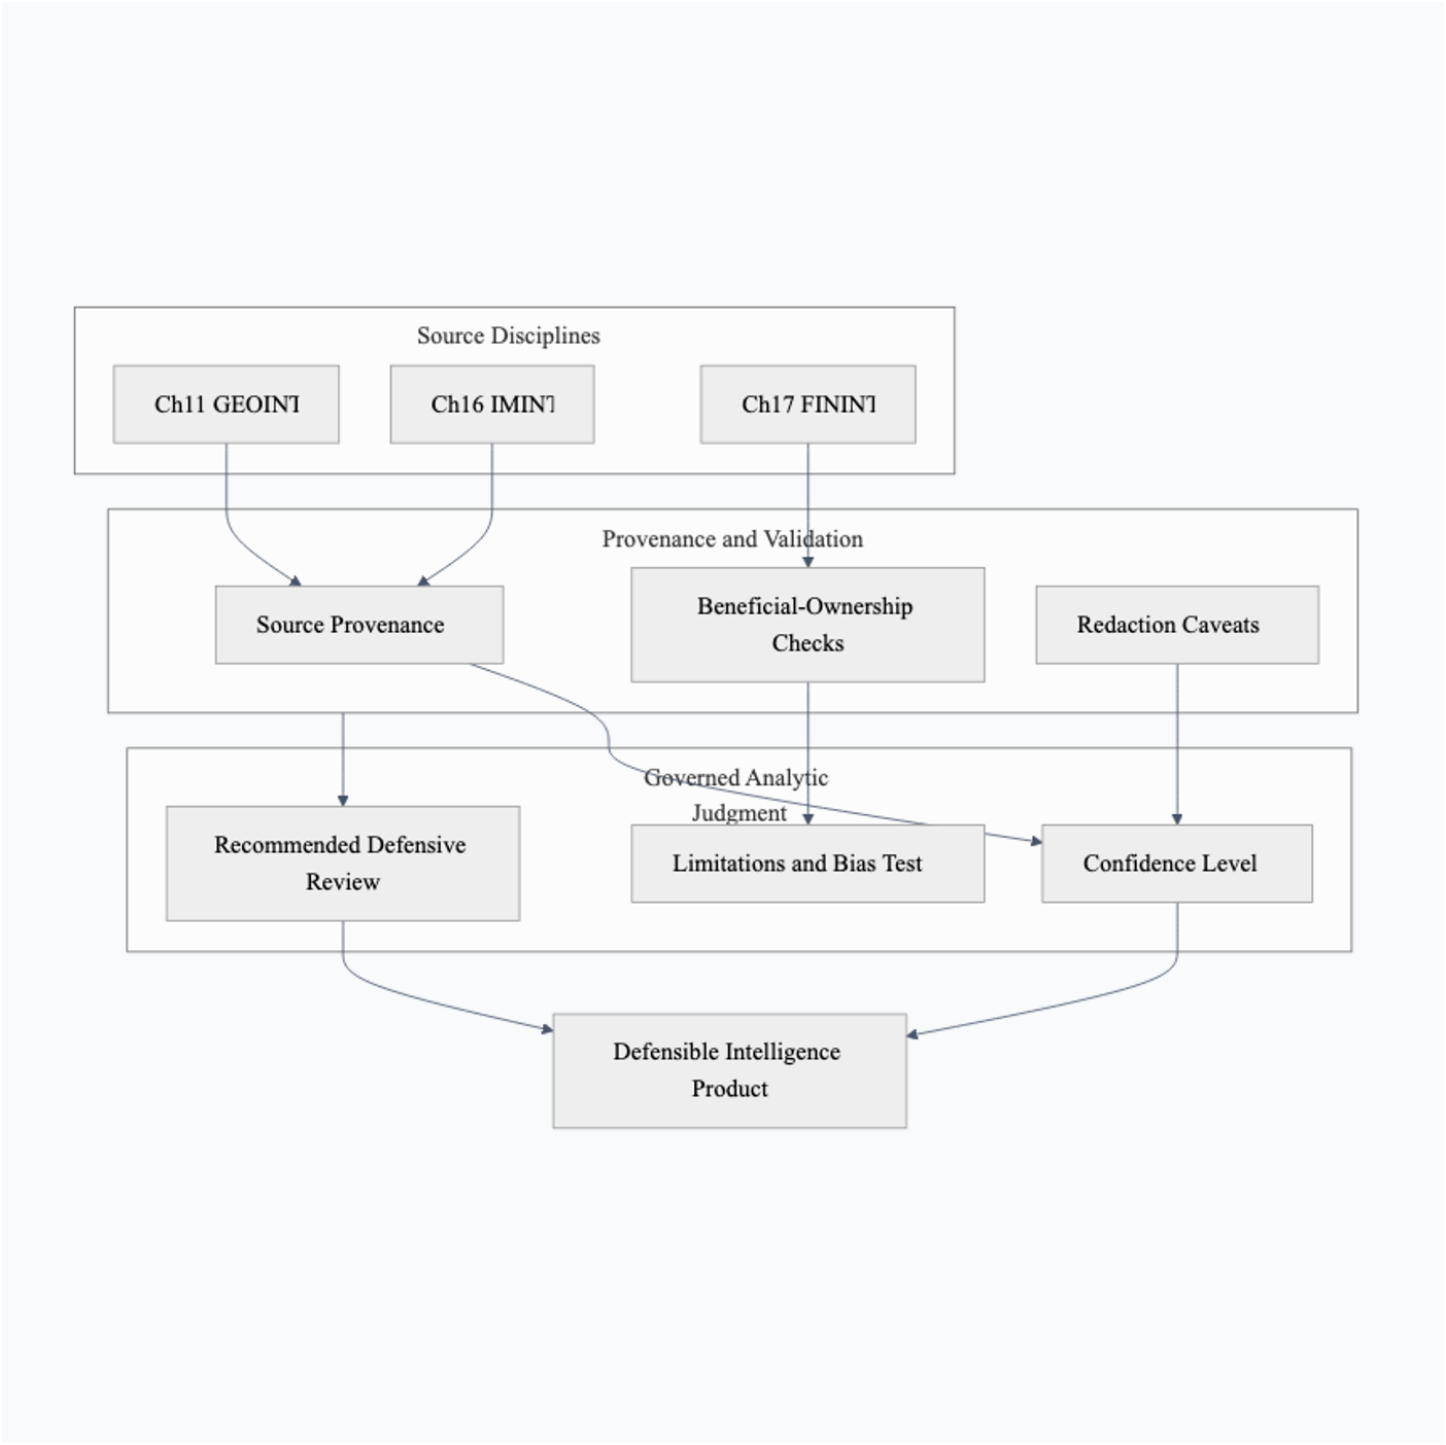

Figure 59: This Part traces how imagery and financial sources move left-to-right through provenance verification and validation gates before becoming a defensible analytic judgment. In the imagery and financial intelligence section, it lets readers compare Source Disciplines, Ch11 GEOINT, Ch16 IMINT, and Ch17 FININT so the visual functions as a traceable course aid rather than an unscoped assertion.

Module	Section reference	Source spine
Imagery Intelligence (IMINT)	Section 25	[ageint253]; [ageint269]; [ageint270]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint302]; [ageint297]; [ageint309]; [ageint310]; [ageint300]; [ageint301]; [ageint298].
Financial Intelligence (FININT)	Section 26	[ageint251]; [ageint252]; [ageint254]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint079]; [ageint080]; [ageint081]; [ageint082]; [ageint302]; [ageint297]; [ageint298]; [ageint306]; [ageint312].

25 Imagery Intelligence (IMINT)

25.0.1 Imagery Intelligence (IMINT) figures and course links: visual evidence, source flow, and navigation

The module uses Figure 60, Figure 61, Figure 62, and Figure 58 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 24, Section 26.
This module teaches the **Open-Source and Geospatial Intelligence Integrity** lane through a bounded, source-backed coursebook chapter. [ageint253]; [ageint269].

25.1 Open-Source and Geospatial Intelligence Integrity frame for Imagery Intelligence (IMINT): source context, topic focus, and reader task

Navigation. Parent section: Section 25.

25.1.1 Imagery Intelligence (IMINT) orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 25.

25.1.2 Imagery Intelligence (IMINT) conceptual primer: source context, core model, and reader task

This chapter teaches OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The chapter uses **Requirements-to-Evidence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.
The central distinction is to separate discovery from collection expansion, and map or media interpretation from targeting. Core topics include **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs; Photo-interpretation literacy: resolution, uncertainty, and scale**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint253]; [ageint269].
Learners move from vocabulary and the **Requirements-to-Evidence Lens** distinction through topic lessons on **Imagery modality literacy: resolution, scale, and sensor-fit** with evidence and misconception checks, then assemble a **requirements matrix with source descriptors, caveats, and collection limits** with safety and rights gates.

25.1.3 Imagery Intelligence (IMINT) learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 25.

- Connect **Imagery modality literacy: resolution, scale, and sensor-fit and Imagery collection-platform literacy: resolution and revisit tradeoffs** to **Open-Source and Geospatial Intelligence Integrity** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **requirements matrix with source descriptors, caveats, and collection limits** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting.

25.1.4 Imagery Intelligence (IMINT) core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 25.

Term	Working definition
Provenance	the origin, custody, and transformation history of a source, which helps evaluate a claim but does not prove its truth or grant reuse permission
Corroboration	comparison of relevant, sufficiently independent evidence for a specific claim; copied sources do not become independent through repetition
Recency	the time relationship between source creation, discovery, and claim
Geospatial quality	accuracy, completeness, temporal fitness, and usability of location data
Minimization	limiting retained information to what the accountable question requires

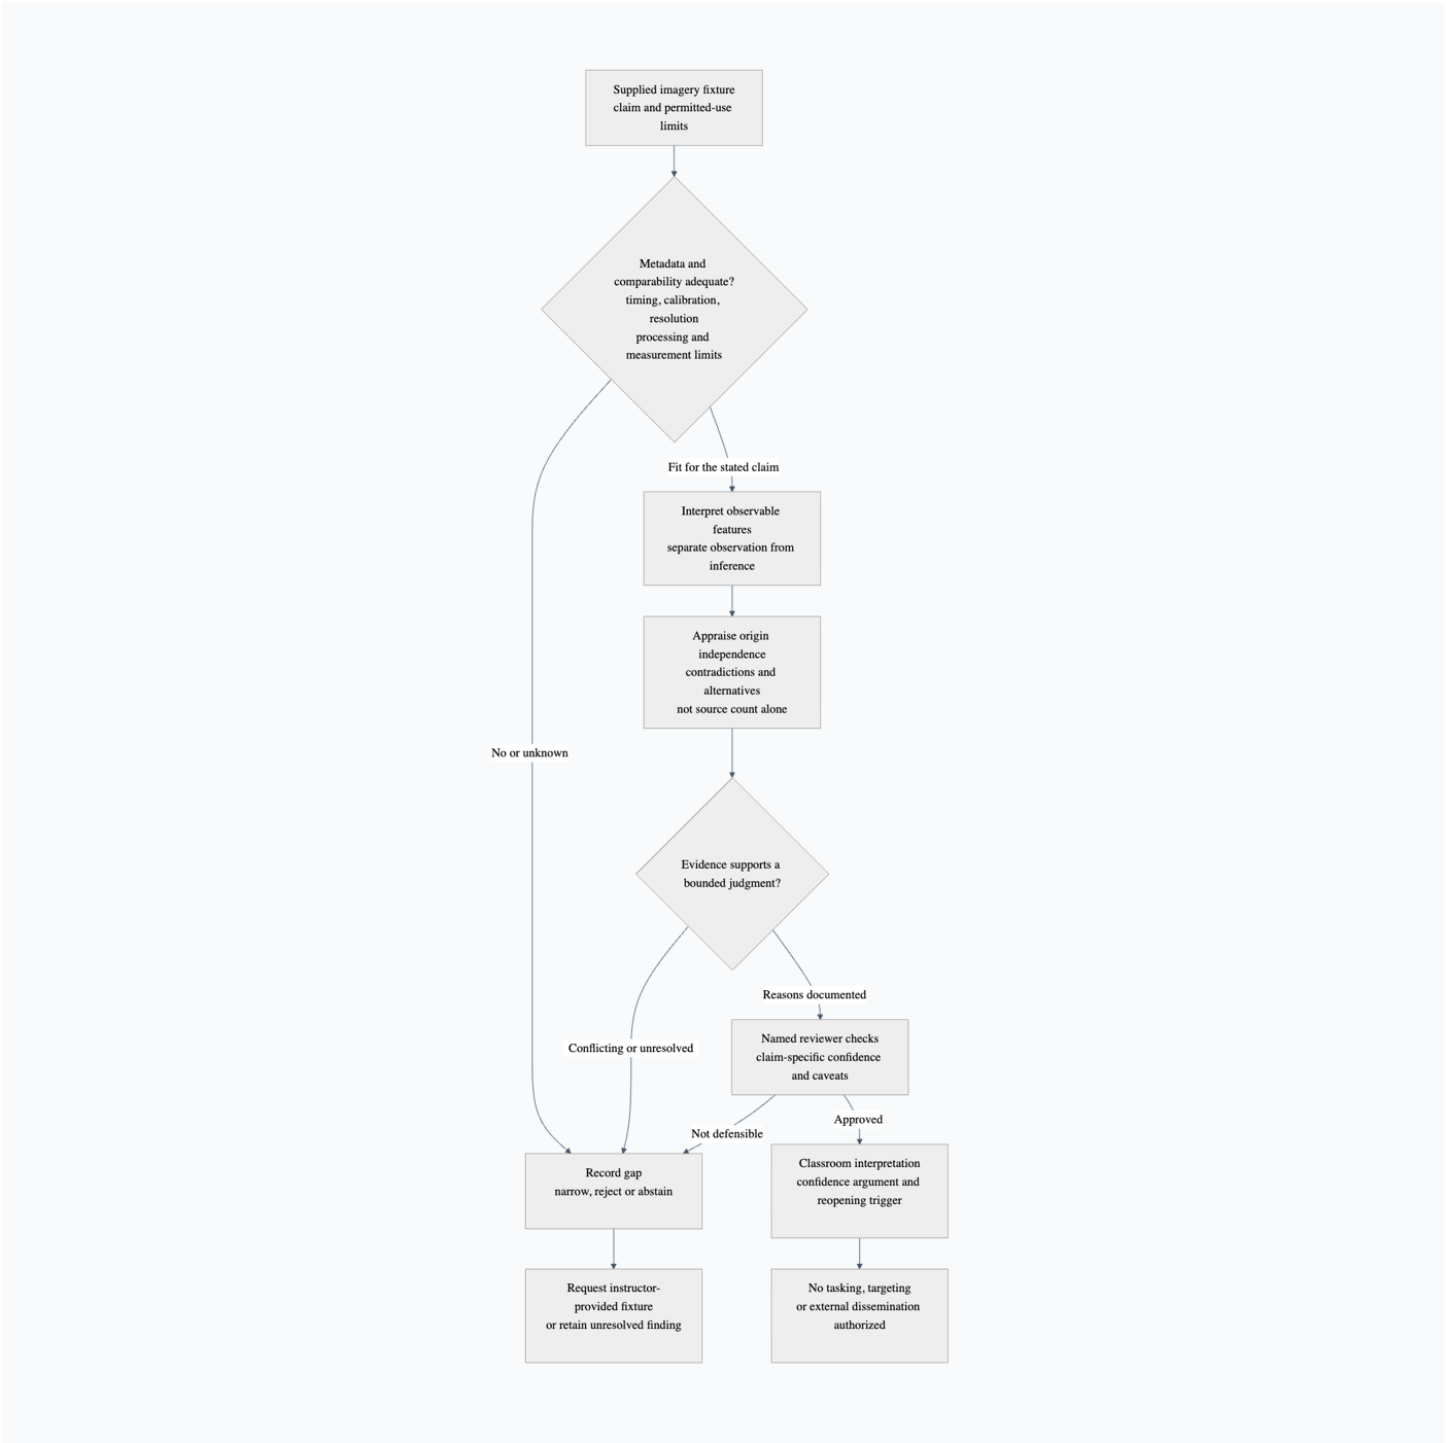

Figure 60: Imagery confidence depends on fitness for a particular claim, not a single-frame versus multi-source rule. This classroom workflow examines timing, calibration, comparable views, measurement limits, independent origins, contradictions, and alternative explanations. A named reviewer may approve a bounded interpretation with justified confidence, or require narrowing, rejection, or abstention. Missing evidence is documented or supplied by the instructor; the diagram does not authorize imagery acquisition or dissemination.

Figure 61: Public-domain USGS EROS declassified HEXAGON image used as a historical example of imagery becoming a governed analytic source. Its reader value is to make U.S. Geological Survey provenance, 1973-03-20 collection context, public-domain status, and analytic reuse boundary visible at a glance, with the imagery and financial intelligence / imagery intelligence imint section as the source section and defensive review as the boundary.

Figure 62: Public-domain USGS EROS KH-7 image used to show how historical collection becomes reproducible open-source imagery analysis. In the imagery and financial intelligence / imagery intelligence imint section, it lets readers compare U.S. Geological Survey provenance, 1966 approx. collection context, public-domain status, and analytic reuse boundary so the visual functions as a traceable course aid rather than an unscoped assertion.

25.2 Requirements-to-Evidence Lens path for Imagery Intelligence (IMINT): lesson cluster, safe artifact, and review

Navigation. Parent section: Section 25.

25.2.1 Imagery Intelligence (IMINT) practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 25.

25.2.2 Imagery Intelligence (IMINT) topic lessons: source-backed concepts and transfer tasks

Imagery Intelligence (IMINT) builds OSINT and GEOINT as public-source reasoning disciplines: availability does not equal reliability, relevance, legality, or ethical reuse. The sequence opens with **Imagery modality literacy: resolution, scale, and sensor-fit**, **Imagery collection-platform literacy: resolution and revisit tradeoffs**, **Photo-interpretation literacy: resolution, uncertainty, and scale** and applies the **Requirements-to-Evidence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 58; module overview Section 25; curriculum atlas Section 2.

Contextual source routes. For module 16's topic-lessons section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

25.2.2.1 Lesson 1: Imagery modality literacy: resolution, scale, and sensor-fit Concept. Imagery modality literacy: resolution, scale, and sensor-fit treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. Visible/near-infrared optical imagery commonly records reflected illumination, thermal infrared can represent emitted radiance, and active SAR measures radar backscatter with geometry-dependent effects; these distinctions are part of USGIF's remote-sensing competency scope [ageint058]. Multispectral samples selected bands, while hyperspectral samples many relatively narrow, usually contiguous bands; neither term promises automatic material identification or finer spatial detail. Sensor modality, spatial, spectral, radiometric and temporal resolution answer different questions. In a synthetic selection card, scene A has fine spatial detail but one broad band and scene B has coarse spatial detail with many narrow bands: choose A for a supplied large-shape boundary comparison, but leave material identity unknown for both without appropriate calibration and reference evidence. The inherited NGA overview and analytic standards are not numerical sensor specifications, so unsupported performance values stay unknown.

Why it matters. Imagery modality literacy matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Imagery modality literacy: resolution, scale, and sensor-fit**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Imagery modality literacy**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Imagery modality literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Imagery modality literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Imagery modality literacy** work as a **location-and-entity evidence ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Imagery modality literacy**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Apply this module's safe boundary for **Imagery modality literacy** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

25.2.2.2 Lesson 2: Imagery collection-platform literacy: resolution and revisit tradeoffs Concept. Imagery collection-platform literacy: resolution and revisit tradeoffs treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. Platform and sensor are separate attributes, and STIX, TAXII and ATLAS do not establish imagery-platform capabilities or collection permissions. A completed fictional media card has original O1 acquired 2025-06-01 10:00 UTC, published 2025-06-03, classroom retrieval 2026-06-08, and derivative D1 cropped/contrast-stretched from O1 with embedded metadata stripped. A supplied 2026 story reuses O1 to allege a current yard change: matching O1's digest to its archived bytes establishes byte identity, not the current-event claim, while D1's different bytes reflect the documented transformation rather than automatic fabrication. The output is 'genuine older supplied scene; current change unsupported', and missing metadata alone proves neither age nor falsity. A second copy of D1 is no independent observation; no flight planning, live collection, surveillance or real location search is performed.

Why it matters. Without explicit treatment of **Imagery collection-platform literacy**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Imagery collection-platform literacy: resolution and revisit tradeoffs**: [ageint309], [ageint310], and [ageint300]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Imagery collection-platform literacy**, inspect the original passages. Curriculum annotation for [ageint309]: An OASIS standard specification defining STIX (Structured Threat Information Expression), a language for exchanging cyber threat intelligence in a standardized, machine-readable form. It establishes a graph-based model with STIX Domain Objects, Cyber-observable Objects, and Relationship Objects, plus meta objects, bundles, and a patterning language for detection. Curriculum annotation for [ageint310]: The OASIS Standard specification for TAXII (Trusted Automated Exchange of Intelligence Information) Version 2.1, approved 10 June 2021. It defines a RESTful, HTTPS-based API for exchanging cyber threat intelligence through Collections in a request-response model, including discovery, API roots, JSON serialization, content negotiation, object retrieval with filtering and pagination, and status monitoring. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge

base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Imagery collection-platform literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Imagery collection-platform literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Imagery collection-platform literacy** work as a **location-and-entity evidence ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Imagery collection-platform literacy**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Transfer **Imagery collection-platform literacy** from this module to a second motif by preserving source-quality review and non-sensitive geospatial interpretation, replacing action with audit, and naming the blocked use.

25.2.2.3 Lesson 3: Photo-interpretation literacy: resolution, uncertainty, and scale **Concept. Photo-interpretation literacy: resolution, uncertainty, and scale** — Audit imagery and map products for resolution, accuracy, temporal fitness, and uncertainty before any geospatial claim.

Worked reasoning and limits. In a completed synthetic case, scenes A and B of a fictional empty yard were acquired on 1 and 4 June but both published on 8 June; a dark region grows from 4 to 9 pixels, while the supplied illumination record changes from overhead to low-angle lighting. Aligning three fixed markers leaves the dark-region difference but cannot distinguish an added object from a longer shadow, so the output is 'appearance changed between acquisitions; physical addition unconfirmed.' A contrast-enhanced copy of B is the negative control: it adds no new acquisition or corroboration, and removing the illumination record increases uncertainty rather than proving construction. Stop before assigning object identity or activity, and update only if a supplied comparable scene or metadata discriminates the alternatives; a publication timestamp never dates the physical change.

Why it matters. Photo-interpretation literacy matters in the **Open-Source and Geospatial Intelligence Integrity** lane because source-quality review and non-sensitive geospatial interpretation evidence must stay separate from judgment; privacy drift is a common failure.

Source support. Inherited source-guide context for **Photo-interpretation literacy: resolution, uncertainty, and scale**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Photo-interpretation literacy**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Photo-interpretation literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Photo-interpretation literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Photo-interpretation literacy** work as a **location-and-entity evidence ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Photo-interpretation literacy**: that a visible feature in imagery is enough for confident attribution without resolution, timing, and provenance caveats.

Transfer task. Apply this module's safe boundary for **Photo-interpretation literacy** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

25.2.2.4 Lesson 4: Commercial imagery literacy: resolution tiers, licensing, and provenance **Concept. Commercial imagery literacy: resolution tiers, licensing, and provenance** treats location evidence as a quality and uncertainty problem, separating map interpretation from targeting or attribution.

Worked reasoning and limits. Commercial availability can widen access without equalizing price, latency, licensing, technical skill or geographic coverage. A licensed scene and a public preview may have different permissible uses and resolutions, and neither permits unrestricted redistribution or analysis of real individuals. The inherited 'democratization' framing is a hypothesis about access, not a measured universal benefit or evidence that commercial imagery removes epistemic or legal constraints.

Why it matters. Without explicit treatment of **Commercial imagery literacy**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Commercial imagery literacy: resolution tiers, licensing, and provenance**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Commercial imagery literacy**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Commercial imagery literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Commercial imagery literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Commercial imagery literacy** work as a **location-and-entity evidence ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Commercial imagery literacy**: that a visible feature is enough for a confident geospatial claim.

Transfer task. Reuse the **Commercial imagery literacy** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

25.2.2.5 Lesson 5: Open-source geolocation literacy: resolution, corroboration, and uncertainty **Concept. Open-source geolocation literacy: resolution, corroboration, and uncertainty** — Audit imagery and map products for resolution, accuracy, temporal fitness, and uncertainty before any geospatial claim.

Worked reasoning and limits. Geolocation compares candidate spatial explanations using independent fixed features and their uncertainty; one generic roof or road shape is not a unique match. Restrict comparison to fictional maps and supplied scenes, keep rejected candidate locations, and abstain if the available resolution admits more than one candidate. The attached NGA overview and ICD 203 do not document a specific Bellingcat methodology, so the inherited named-method attribution remains unsupported and is not an endorsement or a licence for live identity/location lookup.

Why it matters. Without explicit treatment of **Open-source geolocation literacy**, privacy drift undermines source-quality review and non-sensitive geospatial interpretation review; the lesson builds the habit to separate discovery from collection expansion, and map or media interpretation from targeting.

Source support. Inherited source-guide context for **Open-source geolocation literacy: resolution, corroboration, and uncertainty**: [ageint301] and [ageint298]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024].

Evidence to inspect. For **Open-source geolocation literacy**, inspect the original passages. Curriculum annotation for [ageint301]: Official Intelligence Community strategy for open-source intelligence governance, integration, source discovery, data, tools, tradecraft, and workforce priorities. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Open-source geolocation literacy**, build a **requirements matrix with source descriptors, caveats, and collection limits** for this source-quality review and non-sensitive geospatial interpretation topic. The artifact must list the imagery descriptor, the bounded claim about **Open-source geolocation literacy**, the resolution caveat, the uncertainty note, the sensitive-site boundary, and the reviewer who checks the interpretation. Shape **Open-source geolocation literacy** work as a **location-and-entity evidence ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Open-source geolocation literacy**: that a visible feature in imagery is enough for confident attribution without resolution, timing, and provenance caveats.

Transfer task. Apply this module's safe boundary for **Open-source geolocation literacy** to another artifact while keeping source-quality review and non-sensitive geospatial interpretation and reviewer ownership explicit.

25.2.3 Imagery Intelligence (IMINT) worked safe example: synthetic inputs, evidence, and review

Worked example: a synthetic public-resilience team checks whether open data supports a non-sensitive evacuation-route map. [ageint253]; [ageint269].

Contextual source routes. For module 16's worked-example section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **geospatial and financial intelligence uncertainty**. Learners use a **location-and-entity evidence ledger** and keep this boundary visible: No facility targeting, pattern-of-life inference, evasion advice, or attribution certainty beyond evidence.

Frame. The classroom question centers on **Imagery modality literacy: resolution, scale, and sensor-fit**. Excluded actions stay explicit, and the **Requirements-to-Evidence Lens** planning question is: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Inputs. For the **Imagery modality literacy: resolution, scale, and sensor-fit** scenario, use saved fictional road layer A with 100-metre uncertainty and a 2023 date, notice B closing one of two nearby bridges in 2026, repost C copying B, and supplied capture metadata and classroom reuse terms. The Requirements-to-Evidence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Imagery modality literacy: resolution, scale, and sensor-fit**, students first record origin, reuse terms, spatial reference, resolution, and relevant dates; then compare the notice with both bridge footprints and trace C to B; remove C as a control so corroboration does not increase through copying. Minimize personal fields and stop a route recommendation when the old layer cannot resolve bridge identity; hand the gap to the mapping instructor. Pause whenever an inference about Imagery modality literacy: resolution, scale, and sensor-fit appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a source-quality matrix and map note recording one underlying closure notice, unresolved bridge identity and present conditions, and no safe-route judgment; the allowed classroom reuse is documented separately from source reliability, with no live tracking, collection expansion, or identity exposure Retain it as the **location-and-entity evidence ledger** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Imagery modality literacy: resolution, scale, and sensor-fit** as "Requirements-to-Evidence Lens confirms it" is not enough. The revision ties the claim to source-quality review and non-sensitive geospatial interpretation, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Imagery modality literacy: resolution, scale, and sensor-fit** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

25.2.4 Imagery Intelligence (IMINT) practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Requirements-to-Evidence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

Contextual source routes. For module 16's practice-sequence section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Imagery modality literacy: resolution, scale, and sensor-fit, Imagery collection-platform literacy: resolution and revisit tradeoffs, Photo-interpretation literacy: resolution, uncertainty, and scale; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Open-Source and Geospatial Intelligence Integrity** lane.
2. Frame	Answer the lens question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Imagery modality literacy: resolution, scale, and sensor-fit: requirements matrix with source descriptors, caveats, and collection limits.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the location-and-entity evidence ledger fields for Imagery modality literacy: resolution, scale, and sensor-fit.	Unit profile note.	Evidence artifacts include geospatial quality note, temporal caveat.
4. Challenge	Test the misconception that a visible feature is enough for a confident geospatial claim.	Failure-mode note.	The artifact applies the key distinction: separate discovery from collection expansion, and map or media interpretation from targeting.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

25.2.4.1 Imagery Intelligence (IMINT) instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. [ageint253]; [ageint269].

25.2.4.2 Imagery Intelligence (IMINT) extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 25.

Have learners swap artifacts and apply the **Requirements-to-Evidence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.2.5 Imagery Intelligence (IMINT) knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 25.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Imagery modality literacy: resolution, scale, and sensor-fit**.
2. Transfer the **Requirements-to-Evidence Lens** artifact from **Imagery modality literacy: resolution, scale, and sensor-fit** to the final topic, **Open-source geolocation literacy: resolution, corroboration, and uncertainty**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Open-Source and Geospatial Intelligence Integrity** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which source is available but not reliable enough for the claim?
5. Correct this misconception: that a visible feature is enough for a confident geospatial claim.

25.2.5.1 Imagery Intelligence (IMINT) answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Imagery modality literacy: resolution, scale, and sensor-fit** without source evidence, uncertainty, or a safe transfer task.

25.3 Imagery Intelligence (IMINT) assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 25.

25.3.1 Imagery Intelligence (IMINT) evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 25.

25.3.2 Imagery Intelligence (IMINT) transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 25.

25.3.2.1 Imagery Intelligence (IMINT) lineage and source tradition: profile, concepts, and first anchors This sits in the **Open-Source and Geospatial Intelligence Integrity** lineage: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. [ageint253]; [ageint269].

25.3.2.2 Imagery Intelligence (IMINT) working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 25.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**, with provenance and reviewability throughout.

25.3.2.3 Imagery Intelligence (IMINT) knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** supplied public-source records, acquisition and publication times, origin families, sensor metadata, and reuse permissions. [ageint253]; [ageint269].
- **Transforms:** trace originals, distinguish availability from permission, compare spatial and temporal fit, test registration, and challenge apparent corroboration.
- **Outputs:** provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff.
- **Failure modes:** map precision as certainty, old media as current observation, source-count confidence, or identity and location targeting.

25.3.2.4 Imagery Intelligence (IMINT) transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 25.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.
- **Evidence contract:** keep the **Open-Source and Geospatial Intelligence Integrity** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as provenance and claim-fitness table, uncertainty bounds, resolved comparison or explicit evidence gap, and minimized handoff that another reviewer can audit.

25.3.2.5 Imagery Intelligence (IMINT) profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 25.

The matched profile emphasizes public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests. The method stack is source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration; the local topic cluster is **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.3 Imagery Intelligence (IMINT) evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 25.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Open-Source and Geospatial Intelligence Integrity** profile tells reviewers what evidence is strong enough for the module artifact built around **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.3.1 Imagery Intelligence (IMINT) guide source spine: inherited keys and local citation roles Primary guide citations: [ageint253]; [ageint269]; [ageint270]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint302]; [ageint297]; [ageint309]; [ageint310]; [ageint300]; [ageint301]; [ageint298].

25.3.3.2 Imagery Intelligence (IMINT) verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint253]; [ageint269].

Tier	What counts	How it is used
Source guide	[ageint253]; [ageint269]; [ageint270]; [ageint275]; [ageint276]; [ageint283]; [ageint286]; [ageint293]; [ageint295]; [ageint302]; [ageint297]; [ageint309]; [ageint310]; [ageint300]; [ageint301]; [ageint298].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 16's source-canon section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs** and [ageint253]; [ageint269], but only directly verified source URLs are encoded as citations.

25.3.3.3 Imagery Intelligence (IMINT) intelligence practice lens: evidence artifact and safety check Practice lens: **Requirements-to-Evidence Lens** for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. [ageint253]; [ageint269].

Planning question: What accountable requirement justifies the evidence, and which source discipline is the least intrusive fit?

Evidence artifact: requirements matrix with source descriptors, caveats, and collection limits.

Validation rule: show priority, authority, minimization, corroboration, and source quality before any claim is reused. Applied to **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

Handoff contract: deliver metadata-rich evidence packets, not unscoped data piles or implicit targeting requests.

Safety check: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

25.3.3.4 Imagery Intelligence (IMINT) runtime-to-reader map: generated sections and verifier surfaces **Navigation.** Parent section: Section 25.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	16.99	16.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Imagery Intelligence (IMINT) to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Bounded autonomy, procurement, incident-response, and assurance studio	16.101	16.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Imagery Intelligence (IMINT)	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Model-card, recoverability, retention, and learner-support evidence package	16.102	16.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Imagery Intelligence (IMINT)	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Imagery modality literacy: resolution, scale, and sensor-fit	16.1	16.1 source title transformed into safe curriculum treatment; original: Types: Optical, SAR, Infrared, Hyperspectral, Multispectral	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Imagery collection-platform literacy: resolution and revisit tradeoffs	16.2	16.2 source title transformed into safe curriculum treatment; original: Collection Platforms: Satellites, UAVs, Aircraft, Ground-Based	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Photo-interpretation literacy: resolution, uncertainty, and scale	16.3	16.3 source title transformed into safe curriculum treatment; original: Photo Interpretation and All-Source Imagery Analysis	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Commercial imagery literacy: resolution tiers, licensing, and provenance	16.4	16.4 source title transformed into safe curriculum treatment; original: Commercial IMINT and the Democratization of Space-Based Reconnaissance	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Open-source geolocation literacy: resolution, corroboration, and uncertainty	16.5	16.5 source title transformed into safe curriculum treatment; original: Open-Source Geolocation Methods: Bellingcat Methodology	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

25.3.3.5 Imagery Intelligence (IMINT) reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 25.

Lesson topic	Practice lens	Evidence artifact	Safety check
Imagery modality literacy: resolution, scale, and sensor-fit	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Imagery collection-platform literacy: resolution and revisit tradeoffs	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Photo-interpretation literacy: resolution, uncertainty, and scale	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Commercial imagery literacy: resolution tiers, licensing, and provenance	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure
Open-source geolocation literacy: resolution, corroboration, and uncertainty	Requirements-to-Evidence Lens	requirements matrix with source descriptors, caveats, and collection limits	exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure

25.3.3.6 Imagery Intelligence (IMINT) annotated source ledger: real titles and local contribution Each source cited by this **Open-Source and Geospatial Intelligence Integrity** module is paired below with its real title and a one-line note on what it contributes to **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

Source	Cited work	Curriculum annotation	Status
[ageint253]	Common European Data Spaces	This is an official European Commission webpage describing the Common European Data Spaces initiative, part of the EU strategy to create interconnected, trustworthy data-sharing environments across strategic sectors. It explains that data spaces let organizations and individuals share data while retaining control, guided by principles of open participation, privacy protection, and fair access rules.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint269]	Data on the Web Best Practices	A W3C Recommendation, "Data on the Web Best Practices," published January 31, 2017 by the Data on the Web Best Practices Working Group. It offers 35 best practices for publishing and consuming data on the Web, covering metadata, licensing and provenance, data quality, dataset versioning, persistent URIs, machine-readable formats, vocabulary reuse, access methods, preservation, and feedback.	verified source-guide; annotation metadata, not claim verification
[ageint270]	NIST Big Data Interoperability Framework	NIST Special Publication 1500-1 (revised edition by Chang and Grady) establishes foundational terminology and consensus definitions for Big Data through the NIST Big Data Public Working Group. The volume defines Big Data characteristics, taxonomy, and a reference architecture assigning roles to Application Providers, Data Consumers, Data Providers, and System Orchestrators.	verified source-guide; annotation metadata, not claim verification
[ageint275]	Fact Sheet: New Rule on the Accessibility of Web Content and Mobile Apps Provided by State and Local Governments	A US Department of Justice fact sheet explaining the 2024 ADA Title II rule requiring state and local governments to make their web content and mobile apps accessible. It establishes WCAG 2.1 Level AA as the technical standard, applies to entities such as schools, courts, libraries, and transit agencies, and sets compliance deadlines of April 2027 for larger jurisdictions and April 2028 for smaller ones.	verified source-guide; annotation metadata, not claim verification
[ageint276]	What is a Data Protection Impact Assessment and When Is This Mandatory?	A European Data Protection Board FAQ page, part of its data protection guide for small businesses, explaining Data Protection Impact Assessments (DPIAs) and when they are mandatory. It describes a DPIA as a written assessment of the impact of a planned processing operation, required when processing poses high risks to individuals' rights.	verified source-guide; annotation metadata, not claim verification
[ageint283]	Recommendation of the Council on Open Government	An OECD legal instrument document reproducing the Recommendation of the Council on Open Government (OECD/LEGAL/0438), adopted on 14 December 2017. It defines open government as a culture of governance promoting transparency, integrity, accountability, and stakeholder participation in support of democracy and inclusive growth.	verified source-guide; annotation metadata, not claim verification
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 25; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

25.3.4 Imagery Intelligence (IMINT) governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 25.

25.3.5 Imagery Intelligence (IMINT) analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 16's governance-boundary section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Open-Source and Geospatial Intelligence Integrity** for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. [ageint253]; [ageint269].

Curriculum topic spine: Imagery modality literacy: resolution, scale, and sensor-fit, **Imagery collection-platform literacy: resolution and revisit tradeoffs**, **Photo-interpretation literacy: resolution, uncertainty, and scale**. **Recorded source cluster; inspection and scope limits apply:** [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]; [National Geospatial-Intelligence Agency, 2026a]; [Office of the Director of National Intelligence, 2026d]; [Office of the Director of National Intelligence, 2015].

Conceptual depth: public-source discovery converted into accountable intelligence through provenance, corroboration, minimization, and relevance tests.

Method stack: source triage, provenance capture, corroboration matrix, recency audit, geospatial context review, and confidence calibration.

Composability contract: collection notes, source metadata, transformations, caveats, and analytic judgments remain separately exportable.

Known failure modes: privacy drift, stale data, context collapse, platform bias, over-collection, and mistaking availability for reliability.

Defensive boundary: OSINT work uses lawful public, owned-lab, or explicitly approved sources and avoids doxxing, harassment, live tracking, or operational targeting. Applied to **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

Anchor	Why it matters here
[Office of the Director of National Intelligence and Central Intelligence Agency, 2024]	Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Department of State, 2024]	Official strategy source for lawful OSINT governance, discovery, validation, and dissemination. Checked as of 2026-05-21; role: curriculum_anchor.
[International Organization for Standardization, 2013]	International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026b]	Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration. Checked as of 2026-05-21; role: curriculum_anchor.
[National Geospatial-Intelligence Agency, 2026a]	Official NGA source on GEOINT AI, data quality, model performance, interoperability, analyst interaction, and standards leadership. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2026d]	Official sourcing directive for traceability, citations, source descriptors, and source summaries. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of the Director of National Intelligence, 2015]	Official ODNI analytic tradecraft standards directive. Checked as of 2026-05-21; role: source_quality_anchor.

25.3.5.1 Imagery Intelligence (IMINT) evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Open-Source and Geospatial Intelligence Integrity** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint253]; [ageint269].

25.3.6 Imagery Intelligence (IMINT) agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 25.

AGEINT translation is bounded by the **Open-Source and Geospatial Intelligence Integrity** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.6.1 Imagery Intelligence (IMINT) permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 25.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.6.2 Imagery Intelligence (IMINT) excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint253]; [ageint269] and **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

25.3.7 Imagery Intelligence (IMINT) governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 25.

Governance is practiced as a gate on the **Open-Source and Geospatial Intelligence Integrity** lane. Learners use the **Requirements-to-Evidence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.7.1 Imagery Intelligence (IMINT) governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint253]; [ageint269].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Open-Source and Geospatial Intelligence Integrity** failure modes and the **Requirements-to-Evidence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

25.3.7.2 Imagery Intelligence (IMINT) evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Requirements-to-Evidence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.7.3 Imagery Intelligence (IMINT) current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. [ageint253]; [ageint269].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_ic_osint_strategy` for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**?	The INT of First Resort: The IC OSINT Strategy 2024-2026; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official IC OSINT strategy for professionalizing OSINT, integrated collection management, open-source sharing, innovation, and tradecraft.
What does the module inherit from `official_state_osint_strategy` for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**?	Open Source Intelligence Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official strategy source for lawful OSINT governance, discovery, validation, and dissemination.
What does the module inherit from `official_iso_19157_data_quality` for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**?	ISO 19157:2013 Geographic Information - Data Quality; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; International geospatial data-quality standard for completeness, logical consistency, positional accuracy, temporal quality, and usability framing.
What does the module inherit from `official_nga_strategy` for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**?	NGA Strategy; lane `osint_geoint`; checked 2026-05-21.	requirements matrix with source descriptors, caveats, and collection limits; Official NGA strategy anchor for GEOINT readiness, warning, partnership resilience, resource stewardship, and AI integration.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 25; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

25.3.8 Imagery Intelligence (IMINT) assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 25.

25.3.9 Imagery Intelligence (IMINT) assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 25.

25.3.9.1 Imagery Intelligence (IMINT) capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs** and [ageint253]; [ageint269].

25.3.9.2 Imagery Intelligence (IMINT) instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs** and [ageint253]; [ageint269].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

25.3.9.3 Imagery Intelligence (IMINT) assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Imagery modality literacy: resolution, scale, and sensor-fit; **Imagery collection-platform literacy: resolution and revisit tradeoffs** **Photo-interpretation literacy: resolution, uncertainty, and scale**; **Commercial imagery literacy: resolution tiers, licensing, and provenance** **Open-source geolocation literacy: resolution, corroboration, and uncertainty**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: show priority, authority, minimization, corroboration, and source quality before any claim is reused. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude live collection, recruitment, surveillance, interception, tracking, and identity exposure.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

25.3.10 Imagery Intelligence (IMINT) refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint253]; [ageint269] and **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**.

25.3.10.1 Imagery Intelligence (IMINT) refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. The local signals begin with [ageint253]; [ageint269].

25.3.10.2 Imagery Intelligence (IMINT) claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**, and the source spine for these checks begins with [ageint253]; [ageint269].

25.3.11 Imagery Intelligence (IMINT) reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint253]; [ageint269].

Contextual source routes. For module 16's review-checklist section, the **Open-Source and Geospatial Intelligence Integrity** catalog routes include [Office of the Director of National Intelligence and Central Intelligence Agency, 2024]; [United States Department of State, 2024]; [International Organization for Standardization, 2013]; [National Geospatial-Intelligence Agency, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs**. [ageint253]; [ageint269].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.

- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

25.3.12 Imagery Intelligence (IMINT) learning-path links: module map, overview, and curriculum atlas

These links keep **Imagery modality literacy: resolution, scale, and sensor-fit; Imagery collection-platform literacy: resolution and revisit tradeoffs** paired with the orientation atlas, the parent unit, and the previous and next modules, so a reader can trace which claims and caveats are inherited rather than re-derived here. Anchored at [ageint253]; [ageint269].
Section 2, Section 24, Section 26

26 Financial Intelligence (FININT)

26.0.1 Financial Intelligence (FININT) figures and course links: visual evidence, source flow, and navigation

The module uses Figure 63 and Figure 58 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 24, Section 25, Section 27.
This module teaches the **Financial Intelligence and Economic-Security Due Diligence** lane through a bounded, source-backed coursebook chapter. [ageint251]; [ageint252].

26.1 Financial Intelligence and Economic-Security Due Diligence frame for Financial Intelligence (FININT): source context, topic focus, and reader task

Navigation. Parent section: Section 26.

26.1.1 Financial Intelligence (FININT) orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 26.

26.1.2 Financial Intelligence (FININT) conceptual primer: source context, core model, and reader task

This chapter teaches FININT and economic-security analysis as lawful due diligence: signals are interpreted through official lists, typology context, beneficial-ownership uncertainty, and compliance boundaries. The chapter uses **Economic-Security Due-Diligence Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.
The central distinction is to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting. Core topics include **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries; Non-state actor indicator review with attribution caution and governance boundaries**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint251]; [ageint252].
Learners move from vocabulary and the **Economic-Security Due-Diligence Lens** distinction through topic lessons on **FININT Foundations: Collection, Analysis, Reporting** with evidence and misconception checks, then assemble an **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** with safety and rights gates.

26.1.3 Financial Intelligence (FININT) learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 26.

- Connect **FININT Foundations: Collection, Analysis, Reporting and Financial due-diligence typology exercise using synthetic records and compliance boundaries** to **Financial Intelligence and Economic-Security Due Diligence** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build an **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as evasion playbooks, threshold gaming, overconfident attribution, stale sanctions data, unverified beneficial ownership, and confusing compliance screening with intelligence certainty, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: FININT and economic-security examples remain compliance, policy, and resilience oriented; they do not explain how to launder funds, evade sanctions, bypass export controls, or target real firms.

26.1.4 Financial Intelligence (FININT) core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 26.

Term	Working definition
Typology	a recurring pattern used to recognize financial-crime or sanctions-risk signals
Sanctions program	a jurisdiction-specific legal and policy structure whose current status, effective dates, scope, and applicable exceptions require verification
Beneficial ownership	the natural-person control or ownership question behind an entity
Red flag	an indicator that triggers review rather than a standalone conclusion
Compliance boundary	the line between lawful screening or resilience analysis and prohibited evasion advice

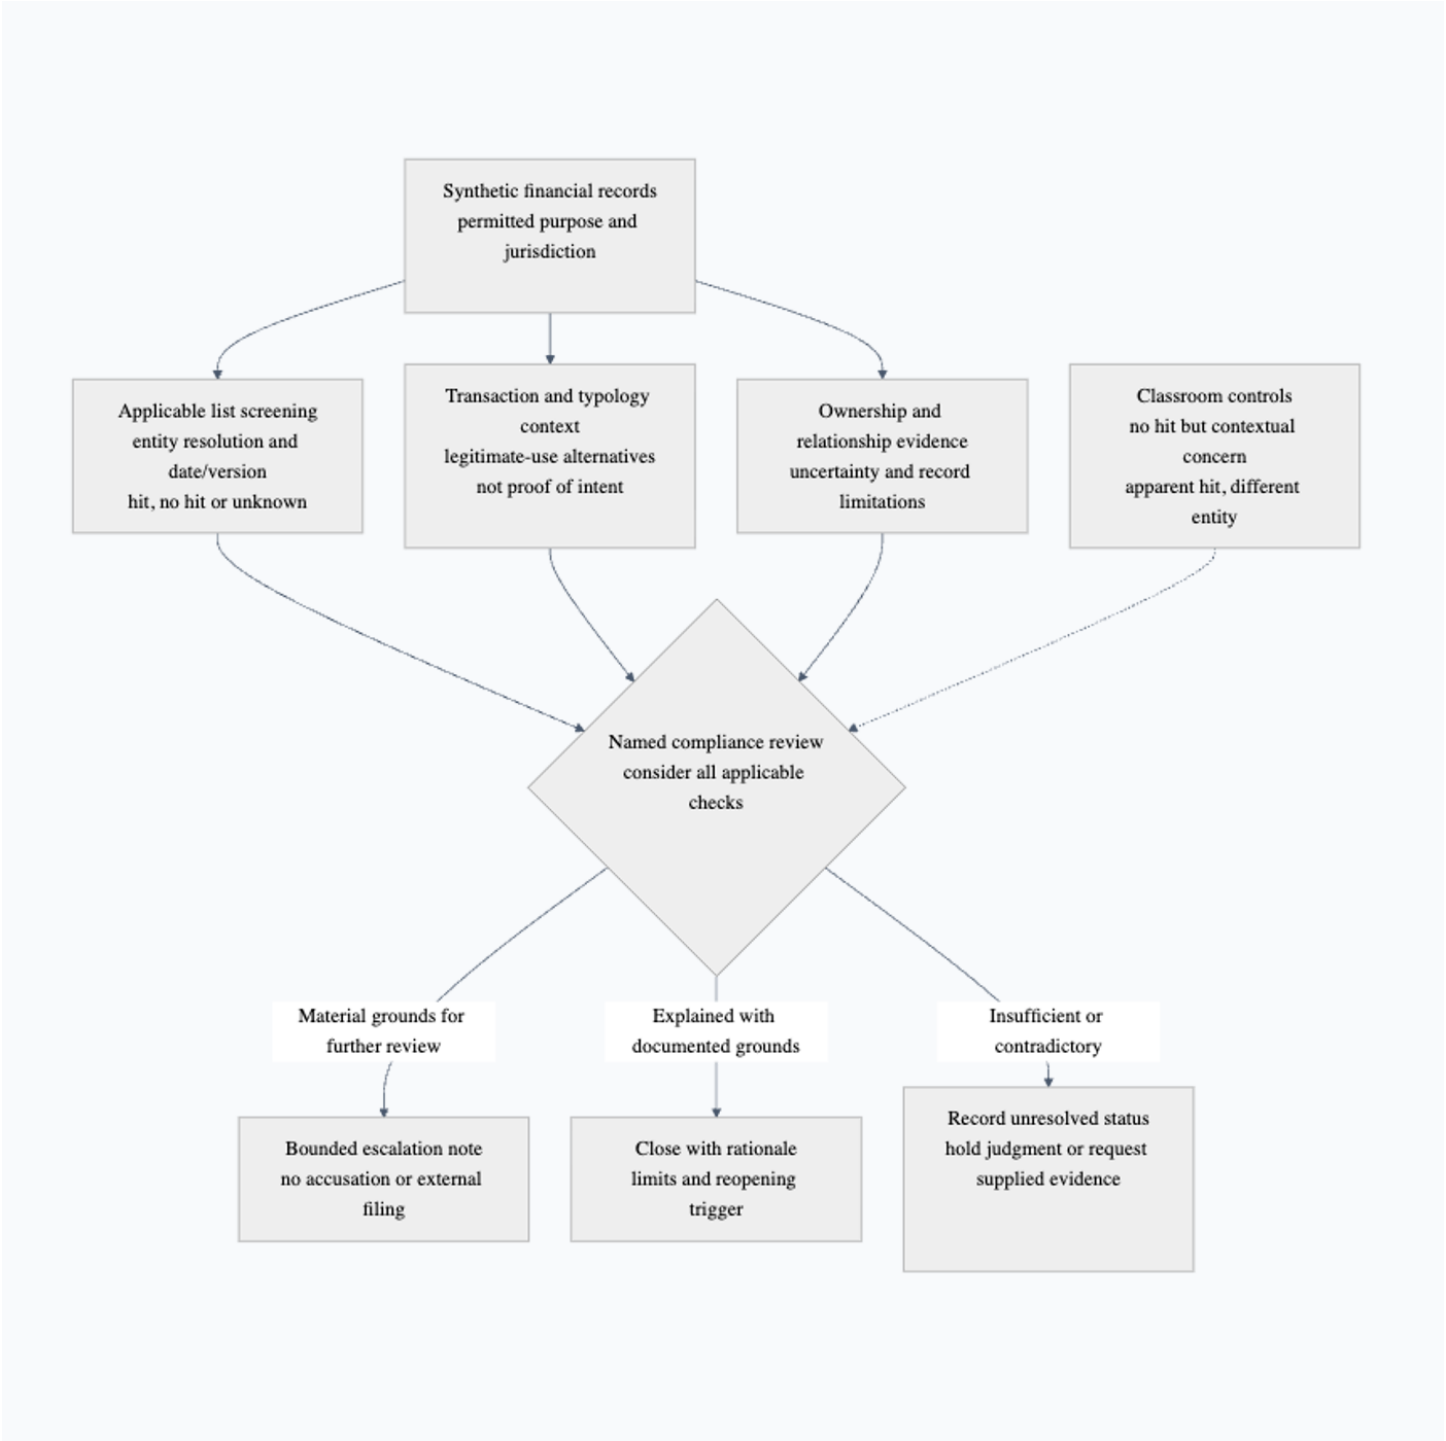

Figure 63: List screening is one applicable check, not a gateway that can bypass transaction, ownership, or jurisdiction context. A no-hit case may still warrant review; an apparent hit may concern a different entity. This synthetic teaching flow preserves benign alternatives and uncertainty, with named review producing a bounded escalation note, justified closure, or insufficient-evidence finding—not an accusation, legal determination, or automatic clearance.

26.2 Economic-Security Due-Diligence Lens path for Financial Intelligence (FININT): lesson cluster, safe artifact, and review

Navigation. Parent section: Section 26.

26.2.1 Financial Intelligence (FININT) practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 26.

26.2.2 Financial Intelligence (FININT) topic lessons: source-backed concepts and transfer tasks

Financial Intelligence (FININT) builds FININT and economic-security analysis as lawful due diligence: signals are interpreted through official lists, typology context, beneficial-ownership uncertainty, and compliance boundaries. The sequence opens with **FININT Foundations: Collection, Analysis, Reporting**, **Financial due-diligence typology exercise using synthetic records and compliance boundaries**, **Non-state actor indicator review with attribution caution and governance boundaries** and applies the **Economic-Security Due-Diligence Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 58; module overview Section 26; curriculum atlas Section 2.

Contextual source routes. For module 17's topic-lessons section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

26.2.2.1 Lesson 1: FININT Foundations: Collection, Analysis, Reporting **Concept. FININT Foundations: Collection, Analysis, Reporting** reads financial intelligence as due-diligence evidence that triggers review rather than proof of intent or guilt.

Worked reasoning and limits. FININT analysis separates transaction observations, entity-resolution hypotheses and claims about purpose or legality. A payment, a network edge and a beneficial-owner conclusion require different evidence; access to a public registry does not authorize unrestricted aggregation or prove the registry is complete or current. The two inherited encyclopedia links share a source family and are not two independent authorities for a financial or legal conclusion.

Why it matters. FININT Foundations connects classroom vocabulary to Financial Intelligence and Economic-Security Due Diligence practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **FININT Foundations: Collection, Analysis, Reporting**: [ageint079] and [ageint080]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **FININT Foundations**, inspect the original passages. Curriculum annotation for [ageint079]: The Wikipedia article on financial intelligence (FININT), defined as gathering information about the financial affairs of entities of interest to understand their nature, capabilities, and intentions. It outlines two core components: collection, in which Financial Intelligence Units gather transaction data and suspicious activity reports from banks, and analysis, in which specialists use data mining to detect tax evasion, money laundering, and terrorist financing. Curriculum annotation for [ageint080]: A Wikipedia article on financial intelligence (FININT), the gathering and analysis of information about financial transactions to detect illicit activity such as money laundering, tax evasion, and terrorist financing. It distinguishes two core functions: collection of raw transaction data and suspicious activity reports by government financial intelligence units, and analysis using data-matching techniques to identify suspicious patterns. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **FININT Foundations**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the source descriptor, the bounded claim about **FININT Foundations**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **FININT Foundations** work as a **location-and-entity evidence ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that FININT Foundations: Collection, Analysis, Reporting establishes intent without reviewing alternative explanations.

Transfer task. Transfer **FININT Foundations** to a second module by preserving defensive due diligence and uncertainty-preserving FININT, changing the source evidence, and naming a new reviewer.

26.2.2.2 Lesson 2: Financial due-diligence typology exercise using synthetic records and compliance boundaries **Concept. Financial due-diligence typology exercise using synthetic records and compliance boundaries** structures financial-pattern review as typology-driven due diligence with escalation thresholds, not proof of wrongdoing.

Worked reasoning and limits. A suspicious-activity report records a reporting suspicion, not a conviction or proof that the named party committed an offence; reporting institutions and FIUs have distinct submission and analytic roles. Reporting triggers, confidentiality, eligible recipients and FIU powers depend on jurisdiction, institution type and the dated rule; the inherited encyclopedia summary cannot establish a current threshold. In a fictional applicability card, an archive extract dated 2024 covers entity class C, while a supplied later body notice dated 2026 expressly exempts C: a missing C filing cannot be treated as noncompliance under the obsolete card. This demonstrates checking effective dates, exceptions and operative body text rather than relying on stale metadata, not a claim about any real jurisdiction's exemptions. Work only with fictional abstracts; do not obtain, disclose or file real reports.

Why it matters. Financial due-diligence typology exercise matters in the **Financial Intelligence and Economic-Security Due Diligence** lane because defensive due diligence and uncertainty-preserving FININT evidence must stay separate from judgment; treating typology match as proof of intent is a common failure.

Source support. Inherited source-guide context for **Financial due-diligence typology exercise using synthetic records and compliance boundaries**: [ageint079]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **Financial due-diligence typology exercise**, inspect the original passages. Curriculum annotation for [ageint079]: The Wikipedia article on financial intelligence (FININT), defined as gathering information about the financial affairs of entities of interest to understand their nature, capabilities, and intentions. It outlines two core components: collection, in which Financial Intelligence Units gather transaction data and suspicious activity reports from banks, and analysis, in which specialists use data mining to detect tax evasion, money laundering, and terrorist financing. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Financial due-diligence typology exercise**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must note the typology descriptor, the bounded claim about **Financial due-diligence typology exercise using**,

the intent caveat, the uncertainty threshold, the no-accusation boundary, and the reviewer who owns escalation. Shape **Financial due-diligence typology exercise** work as a **location-and-entity evidence ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Financial due-diligence typology exercise**: that a typology or pattern match is proof of intent rather than a flag requiring corroboration and alternative explanations.

Transfer task. Apply this module's safe boundary for **Financial due-diligence typology exercise** to another artifact while keeping defensive due diligence and uncertainty-preserving FININT and reviewer ownership explicit.

26.2.2.3 Lesson 3: Non-state actor indicator review with attribution caution and governance boundaries Concept. Non-state actor indicator review with attribution caution and governance boundaries uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. A typology describes a possible pattern, not terrorist purpose, a prohibited recipient or criminal conduct; subscriptions and donations can explain repeated small payments. In a fictional packet, three 20-unit transfers on consecutive dates have no list match, while invoice I1 explains two as scheduled instalments and the third lacks context. The result is 'two transfers explained by supplied invoices; third unresolved', not 'clean because no hit' or 'terrorist financing because repeated'; currency, time and counterparty context are still required. A list non-match cannot bypass transaction-context review, and a red flag cannot establish guilt. No interdiction, live monitoring or operational response follows from the classroom disposition.

Why it matters. Without explicit treatment of **Non-state actor indicator review**, evasion playbooks undermines defensive due diligence and uncertainty-preserving FININT review; the lesson builds the habit to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting.

Source support. Inherited source-guide context for **Non-state actor indicator review with attribution caution and governance boundaries**: [ageint079]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **Non-state actor indicator review**, inspect the original passages. Curriculum annotation for [ageint079]: The Wikipedia article on financial intelligence (FININT), defined as gathering information about the financial affairs of entities of interest to understand their nature, capabilities, and intentions. It outlines two core components: collection, in which Financial Intelligence Units gather transaction data and suspicious activity reports from banks, and analysis, in which specialists use data mining to detect tax evasion, money laundering, and terrorist financing. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Non-state actor indicator review**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the actor descriptor, the bounded claim about **state actor indicator review with**, the attribution caveat, the uncertainty note, the non-targeting boundary, and the reviewer who approves the assessment. Shape **Non-state actor indicator review** work as a **location-and-entity evidence ledger** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception that lacking a state sponsor places an actor outside the reach of governance, accountability, and applicable rules.

Transfer task. Transfer **Non-state actor indicator review** from this module to a second motif by preserving defensive due diligence and uncertainty-preserving FININT, replacing action with audit, and naming the blocked use.

26.2.2.4 Lesson 4: The SWIFT System and Intelligence Collection Concept. The SWIFT System and Intelligence Collection is taught in the **Financial Intelligence and Economic-Security Due Diligence** lane. The analytic distinction is to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. SWIFT is a financial messaging system; a message about an instructed payment is not by itself proof of settlement, beneficiary control or unlawful purpose. Distinguish instruction, message transmission, account posting and final settlement in supplied fictional records. The general FININT reference is not a technical SWIFT specification or collection authority, so current message-field semantics and access powers remain unknown without appropriate dated extracts.

Why it matters. Analysts use **The SWIFT System** to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting. A defensible treatment names the judgment it enables for defensive due diligence and uncertainty-preserving FININT review, the proof limit that evasion playbooks would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **The SWIFT System and Intelligence Collection**: [ageint079]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **The SWIFT System**, inspect the original passages. Curriculum annotation for [ageint079]: The Wikipedia article on financial intelligence (FININT), defined as gathering information about the financial affairs of entities of interest to understand their nature, capabilities, and intentions. It outlines two core components: collection, in which Financial Intelligence Units gather transaction data and suspicious activity reports from banks, and analysis, in which specialists use data mining to detect tax evasion, money laundering, and terrorist financing. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **The SWIFT System**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the source descriptor, the bounded claim about **SWIFT System and Intelligence Collection**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **The SWIFT System** work as a **location-and-entity evidence ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that The SWIFT System and Intelligence Collection is optional whenever separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting feels inconvenient.

Transfer task. Transfer **The SWIFT System** to a second module by preserving defensive due diligence and uncertainty-preserving FININT, changing the source evidence, and naming a new reviewer.

26.2.2.5 Lesson 5: Cryptocurrency Records: Privacy, Transfers and Inference Limits Concept. Cryptocurrency Records: Privacy, Transfers and Inference Limits — Test whether a method is no more intrusive than the accountable need justifies and whether affected groups have redress.

Worked reasoning and limits. A cryptocurrency address is not a verified person, and an address cluster is a model-dependent linkage rather than beneficial-owner proof. A bridge transfers representations across systems, while privacy mechanisms can limit observable linkage; use of either does not establish the covert or criminal purpose implied by the raw inherited heading. The NGA and analytic-standards references do not substantiate

protocol-specific tracing capabilities or legal status; those remain unsupported, and this course excludes live wallet lookup, tracing real people and evasion instructions.

Why it matters. Cryptocurrency Records connects classroom vocabulary to Financial Intelligence and Economic-Security Due Diligence practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Cryptocurrency Records: Privacy, Transfers and Inference Limits**: [ageint298], [ageint306], and [ageint312]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **Cryptocurrency Records**, inspect the original passages. Curriculum annotation for [ageint298]: Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations. Curriculum annotation for [ageint306]: Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support. Curriculum annotation for [ageint312]: Official Government of Canada guide for responsible use of agentic AI, used for public-sector agent governance and accountability source support. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cryptocurrency Records**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the source descriptor, the bounded claim about **Cryptocurrency Records**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Cryptocurrency Records** work as a **location-and-entity evidence ledger** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Cryptocurrency Records: Privacy, Transfers and Inference Limits establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Cryptocurrency Records** to a second module by preserving defensive due diligence and uncertainty-preserving FININT, changing the source evidence, and naming a new reviewer.

26.2.2.6 Lesson 6: Economic Warfare and FININT as a Strategic Tool

Concept. Economic Warfare and FININT as a Strategic Tool reads financial intelligence as due-diligence evidence that triggers review rather than proof of intent or guilt.

Worked reasoning and limits. The inherited Citizendium reference is an unwritten/empty article in the source record and supplies no substantive evidence. Separate a policy instrument, legal authority, observed financial effect and causal effect; none follows from the title or a national-security rationale. Sanctions applicability requires jurisdiction, effective date, covered entity and ownership/control rule, and without an adequate dated extract the disposition is unknown rather than prohibited or cleared. Even a conceptual workflow must keep entity matching, list/programme applicability, transaction context and ownership uncertainty as separate checks; a no-hit result cannot automatically clear the other questions.

Why it matters. Economic Warfare connects classroom vocabulary to Financial Intelligence and Economic-Security Due Diligence practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Economic Warfare and FININT as a Strategic Tool**: [ageint081]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **Economic Warfare**, inspect the original passages. Curriculum annotation for [ageint081]: The Citizendium 'Financial intelligence' article was never written; the page is empty. Use an authoritative alternative source for financial intelligence definitions. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Economic Warfare**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the source descriptor, the bounded claim about **Economic Warfare and FININT as**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Economic Warfare** work as a **location-and-entity evidence ledger** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Economic Warfare and FININT as a Strategic Tool replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Economic Warfare** to a second module by preserving defensive due diligence and uncertainty-preserving FININT, changing the source evidence, and naming a new reviewer.

26.2.2.7 Lesson 7: Money Laundering Detection: Financial due-diligence typology exercise using synthetic records and compliance boundaries

Concept. Money Laundering Detection: Financial due-diligence typology exercise using synthetic records and compliance boundaries uses typologies to structure review of transactional patterns, source quality, and escalation thresholds—not investigative targeting.

Worked reasoning and limits. In a completed synthetic packet, E1 ('Orion Parts', jurisdiction J, ID 11) and E2 ('ORION PARTS', jurisdiction K, ID 22) share a normalized name and address, list L1 names J/11, and transaction T supplies only the name: normalization produces two candidates, not one resolved counterparty, since a shared office address also need not imply control. The result for T is 'name match; list applicability and ownership unknown', with no guilt or blocking conclusion. Fictional classroom extracts dated 2026-01-01 use a same-ID ownership flag of at least 50% in J and at least 25% in K; for a separate E1-only record stating one relevant owner's 40%, J's stated flag is not triggered, K's rule cannot be substituted across jurisdictions, and missing other ownership interests prevents a clearance conclusion. E2 is the negative control against name/address-only joining; changing E1's supplied share to 60% changes J's classroom flag only, while removing ID/jurisdiction stops classification instead of prompting a live lookup. All entities, percentages and rules are invented teaching inputs, not real legal thresholds, and neither a flag nor its absence proves beneficial ownership, sanctions status or money laundering.

Why it matters. Analysts use **Money Laundering Detection** to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting. A defensible treatment names the judgment it enables for defensive due diligence and uncertainty-preserving FININT review, the proof limit that treating typology match as proof of intent would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Money Laundering Detection: Financial due-diligence typology exercise using synthetic records and compliance boundaries**: [ageint080]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **Money Laundering Detection**, inspect the original passages. Curriculum annotation for [ageint080]: A Wikipedia article on financial intelligence (FININT), the gathering and analysis of information about financial transactions to detect illicit activity such as money laundering, tax evasion, and terrorist financing. It distinguishes two core functions: collection of raw transaction data and suspicious activity reports by government financial intelligence units, and analysis using data-matching techniques to identify suspicious patterns. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Money Laundering Detection**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must note the typology descriptor, the bounded claim about **Money Laundering Detection**, the intent caveat, the uncertainty threshold, the no-accusation boundary, and the reviewer who owns escalation. Shape **Money Laundering Detection** work as a **location-and-entity evidence ledger** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Money Laundering Detection**: that a typology or pattern match is proof of intent rather than a flag requiring corroboration and alternative explanations.

Transfer task. Apply this module's safe boundary for **Money Laundering Detection** to another artifact while keeping defensive due diligence and uncertainty-preserving FININT and reviewer ownership explicit.

26.2.2.8 Lesson 8: FININT Supporting National Security: Pillars and Methods

Concept. FININT Supporting National Security: Pillars and Methods reads financial intelligence as due-diligence evidence that triggers review rather than proof of intent or guilt.

Worked reasoning and limits. An institutional account can propose that coordination improves resilience without measuring that causal effect or supplying legal authority for data sharing. Distinguish a paper's conceptual framework, documented information flow and independently evaluated outcome; a broad national-security rationale does not remove privacy or due-process limits. This inherited paper is not a substitute for dated legislation, a sanctions determination or an empirical accuracy study, so those claims remain outside its established support.

Why it matters. Analysts use **FININT Supporting National Security** to separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting. A defensible treatment names the judgment it enables for defensive due diligence and uncertainty-preserving FININT review, the proof limit that evasion playbooks would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **FININT Supporting National Security: Pillars and Methods**: [ageint082]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b].

Evidence to inspect. For **FININT Supporting National Security**, inspect the original passages. Curriculum annotation for [ageint082]: A 2025 article by Kevin Hk Chow in Modern Economy titled "Financial Intelligence: A Crucial Pillar of National Security." It argues that Financial Intelligence (FININT) serves as a critical interface between economic systems and national security, used to detect and disrupt illicit financial networks tied to money laundering, terrorism financing, and transnational crime. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **FININT Supporting National Security**, build a **economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary** for this defensive due diligence and uncertainty-preserving FININT topic. The artifact must name the source descriptor, the bounded claim about **FININT Supporting National Security**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **FININT Supporting National Security** work as a **location-and-entity evidence ledger** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that FININT Supporting National Security: Pillars and Methods is optional whenever separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting feels inconvenient.

Transfer task. Transfer **FININT Supporting National Security** to a second module by preserving defensive due diligence and uncertainty-preserving FININT, changing the source evidence, and naming a new reviewer.

26.2.3 Financial Intelligence (FININT) worked safe example: synthetic inputs, evidence, and review

Worked example: a sample nonprofit screens a synthetic supplier record for classroom due-diligence practice. [ageint251]; [ageint252].

Contextual source routes. For module 17's worked-example section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **geospatial and financial intelligence uncertainty**. Learners use a **location-and-entity evidence ledger** and keep this boundary visible: No facility targeting, pattern-of-life inference, evasion advice, or attribution certainty beyond evidence.

Frame. The classroom question centers on **FININT Foundations: Collection, Analysis, Reporting**. Excluded actions stay explicit, and the **Economic-Security Due-Diligence Lens** planning question is: Which financial, sanctions, export-control, or supplier-risk signal is being interpreted for lawful compliance or resilience?

Inputs. For the **FININT Foundations: Collection, Analysis, Reporting** scenario, use toy supplier Cedar with registration ID C-17, a fictional screening-list snapshot naming Cedar with ID C-71, an undated ownership field, transaction summaries, and a jurisdiction-and-effective-date card marked incomplete. The Economic-Security Due-Diligence Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **FININT Foundations: Collection, Analysis, Reporting**, students first verify the supplied list's provenance, date, and jurisdictional scope; then compare registration IDs, names, and ownership dates and document each mismatch; swap the same-name entities as a negative control, rejecting a name-only match. Treat red flags as review triggers, not findings of crime; stop clearance or restriction decisions until the compliance reviewer resolves applicable status and missing ownership evidence. Pause whenever an inference about FININT Foundations: Collection, Analysis, Reporting appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a due-diligence packet marking the name hit unconfirmed because C-17 and C-71 differ, beneficial ownership unknown, and applicable legal status unresolved; the compliance owner receives the dated mismatch record, not an accusation, universal sanctions conclusion, or evasion recommendation Retain it as the **location-and-entity evidence ledger** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **FININT Foundations: Collection, Analysis, Reporting** as "Economic-Security Due-Diligence Lens confirms it" is not enough. The revision ties the claim to defensive due diligence and uncertainty-preserving FININT, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **FININT Foundations: Collection, Analysis, Reporting** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

26.2.4 Financial Intelligence (FININT) practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Economic-Security Due-Diligence Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

Contextual source routes. For module 17's practice-sequence section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare FININT Foundations: Collection, Analysis, Reporting, Financial due-diligence typology exercise using synthetic records and compliance boundaries, Non-state actor indicator review with attribution caution and governance boundaries; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Financial Intelligence and Economic-Security Due Diligence** lane.
2. Frame	Answer the lens question: Which financial, sanctions, export-control, or supplier-risk signal is being interpreted for lawful compliance or resilience?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for FININT Foundations: Collection, Analysis, Reporting: economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the location-and-entity evidence ledger fields for FININT Foundations: Collection, Analysis, Reporting.	Unit profile note.	Evidence artifacts include geospatial quality note, temporal caveat.
4. Challenge	Test the misconception that FININT Foundations: Collection, Analysis, Reporting establishes intent without reviewing alternative explanations.	Failure-mode note.	The artifact applies the key distinction: separate compliance-oriented risk analysis from evasion, attribution certainty, or targeting.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

26.2.4.1 Financial Intelligence (FININT) instructor notes: source reasoning, review points, and studio focus Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. [ageint251]; [ageint252].

26.2.4.2 Financial Intelligence (FININT) extension exercise: peer validation and refresh trigger review **Navigation.** Parent section: Section 26.

Have learners swap artifacts and apply the **Economic-Security Due-Diligence Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.2.5 Financial Intelligence (FININT) knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 26.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **FININT Foundations: Collection, Analysis, Reporting**.
2. Transfer the **Economic-Security Due-Diligence Lens** artifact from **FININT Foundations: Collection, Analysis, Reporting** to the final topic, **FININT Supporting National Security: Pillars and Methods**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Financial Intelligence and Economic-Security Due Diligence** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which red flag requires escalation, and what evidence is still missing?
5. Correct this misconception: that FININT Foundations: Collection, Analysis, Reporting establishes intent without reviewing alternative explanations.

26.2.5.1 Financial Intelligence (FININT) answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **FININT Foundations: Collection, Analysis, Reporting** without source evidence, uncertainty, or a safe transfer task.

26.3 Financial Intelligence (FININT) assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 26.

26.3.1 Financial Intelligence (FININT) evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 26.

26.3.2 Financial Intelligence (FININT) transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 26.

26.3.2.1 Financial Intelligence (FININT) lineage and source tradition: profile, concepts, and first anchors This sits in the **Financial Intelligence and Economic-Security Due Diligence** lineage: defensive economic intelligence that links financial-crime signals, sanctions programs, export controls, beneficial-ownership uncertainty, and supply-chain due diligence to lawful compliance and policy analysis. [ageint251]; [ageint252].

26.3.2.2 Financial Intelligence (FININT) working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 26.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**, with provenance and reviewability throughout.

26.3.2.3 Financial Intelligence (FININT) knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** fictional entity identifiers, dated list snapshots, transaction context, ownership claims, and applicability questions. [ageint251]; [ageint252].
- **Transforms:** compare identifiers and contradictory evidence, inspect lawful alternatives and dependencies, separate alerts from culpability, and obtain authorized review.
- **Outputs:** entity-hypothesis table, unresolved-match record, source and jurisdiction limits, and compliance-review referral.
- **Failure modes:** name-only accusation, no-hit clearance, address-link ownership inference, or invented reporting obligations.

26.3.2.4 Financial Intelligence (FININT) transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 26.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.
- **Evidence contract:** keep the **Financial Intelligence and Economic-Security Due Diligence** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as entity-hypothesis table, unresolved-match record, source and jurisdiction limits, and compliance-review referral that another reviewer can audit.

26.3.2.5 Financial Intelligence (FININT) profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 26.

The matched profile emphasizes defensive economic intelligence that links financial-crime signals, sanctions programs, export controls, beneficial-ownership uncertainty, and supply-chain due diligence to lawful compliance and policy analysis. The method stack is typology-to-control mapping, sanctions-program review, beneficial ownership uncertainty notes, export-control red-flag triage, supplier risk registers, and compliance-oriented analytic memos; the local topic cluster is **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.3 Financial Intelligence (FININT) evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 26.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Financial Intelligence and Economic-Security Due Diligence** profile tells reviewers what evidence is strong enough for the module artifact built around **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.3.1 Financial Intelligence (FININT) guide source spine: inherited keys and local citation roles Primary guide citations: [ageint251]; [ageint252]; [ageint254]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint079]; [ageint080]; [ageint081]; [ageint082]; [ageint302]; [ageint297]; [ageint298]; [ageint306]; [ageint312].

26.3.3.2 Financial Intelligence (FININT) verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint251]; [ageint252].

Tier	What counts	How it is used
Source guide	[ageint251]; [ageint252]; [ageint254]; [ageint273]; [ageint274]; [ageint275]; [ageint286]; [ageint287]; [ageint292]; [ageint079]; [ageint080]; [ageint081]; [ageint082]; [ageint302]; [ageint297]; [ageint298]; [ageint306]; [ageint312].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 17's source-canon section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries** and [ageint251]; [ageint252], but only directly verified source URLs are encoded as citations.

26.3.3.3 Financial Intelligence (FININT) intelligence practice lens: evidence artifact and safety check Practice lens: **Economic-Security Due-Diligence Lens** for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. [ageint251]; [ageint252].

Planning question: Which financial, sanctions, export-control, or supplier-risk signal is being interpreted for lawful compliance or resilience?

Evidence artifact: economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary.

Validation rule: verify official list source, typology provenance, beneficial-ownership uncertainty, export-control relevance, and non-evasion framing. Applied to **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

Handoff contract: handoff separates raw source, entity hypothesis, compliance control, analytic judgment, and recommended defensive next review.

Safety check: exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms.

26.3.3.4 Financial Intelligence (FININT) runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 26.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	17.99	17.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Financial Intelligence (FININT) to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Bounded autonomy, procurement, incident-response, and assurance studio	17.101	17.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Financial Intelligence (FININT)	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Model-card, recoverability, retention, and learner-support evidence package	17.102	17.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Financial Intelligence (FININT)	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
FININT Foundations: Collection, Analysis, Reporting	17.1	17.1 FININT Foundations: Collection, Analysis, Reporting	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Financial due-diligence typology exercise using synthetic records and compliance boundaries	17.2	17.2 source title transformed into safe curriculum treatment; original: Suspicious Activity Reports (SARs) and Financial Intelligence Units	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Non-state actor indicator review with attribution caution and governance boundaries	17.3	17.3 source title transformed into safe curriculum treatment; original: Terrorist Financing: Identification, Typologies, Interdiction	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
The SWIFT System and Intelligence Collection	17.4	17.4 The SWIFT System and Intelligence Collection	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Cryptocurrency Records: Privacy, Transfers and Inference Limits	17.5	17.5 Cryptocurrency Records: Privacy, Transfers and Inference Limits	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Economic Warfare and FININT as a Strategic Tool	17.6	17.6 Economic Warfare and FININT as a Strategic Tool	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Financial due-diligence typology exercise using synthetic records and compliance boundaries	17.7	17.7 source title transformed into safe curriculum treatment; original: Money Laundering Detection: Data Mining and Matching Techniques	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
FININT Supporting National Security: Pillars and Methods	17.8	17.8 FININT Supporting National Security: Pillars and Methods	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms

26.3.3.5 Financial Intelligence (FININT) reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 26.

Lesson topic	Practice lens	Evidence artifact	Safety check
FININT Foundations: Collection, Analysis, Reporting	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Financial due-diligence typology exercise using synthetic records and compliance boundaries	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Non-state actor indicator review with attribution caution and governance boundaries	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms

Lesson topic	Practice lens	Evidence artifact	Safety check
The SWIFT System and Intelligence Collection	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Cryptocurrency Records: Privacy, Transfers and Inference Limits	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Economic Warfare and FININT as a Strategic Tool	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
Money Laundering Detection: Financial due-diligence typology exercise using synthetic records and compliance boundaries	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms
FININT Supporting National Security: Pillars and Methods	Economic-Security Due-Diligence Lens	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary	exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms

26.3.3.6 Financial Intelligence (FININT) annotated source ledger: real titles and local contribution Each source cited by this **Financial Intelligence and Economic-Security Due Diligence** module is paired below with its real title and a one-line note on what it contributes to **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

Source	Cited work	Curriculum annotation	Status
[ageint251]	European Data Governance Act	The European Commission page explaining the Data Governance Act, an EU regulation that became applicable in September 2023 to build trust in data sharing and ease reuse of data. It outlines four mechanisms: facilitating reuse of protected public-sector data, establishing trusted data intermediaries, enabling voluntary data sharing by citizens and businesses, and removing barriers to cross-sector and cross-border data use.	verified source-guide; annotation metadata, not claim verification
[ageint252]	Data Act Explained	An official European Commission explainer on the EU Data Act, which became applicable on 12 September 2025.	verified source-guide; annotation metadata, not claim verification
[ageint254]	A European Strategy for Data	An official European Commission page outlining the European Strategy for Data, which aims to create a single market for data to support competitiveness and data sovereignty. It describes initiatives such as Common European Data Spaces, opening high-value public datasets, and investment in cloud and data-processing capacity, supported by the Data Governance Act and the Data Act. The page frames data sharing as a driver of innovation balanced with privacy and European values.	verified source-guide; annotation metadata, not claim verification
[ageint273]	WCAG 2 Overview	The W3C Web Accessibility Initiative overview of the Web Content Accessibility Guidelines (WCAG), an international standard for making web content accessible to people with disabilities. It explains that WCAG is organized around four principles (perceivable, operable, understandable, robust) with testable success criteria at three conformance levels (A, AA, AAA), and covers versions 2.0, 2.1, and 2.2.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint274]	CAST Universal Design for Learning Guidelines version 3.0	The official CAST website for the Universal Design for Learning (UDL) Guidelines version 3.0, released in 2024. The framework offers research-based guidance for designing inclusive learning environments and is organized around three principles: Engagement (motivation and emotional support), Representation (accessible presentation of information), and Action and Expression (diverse means of participation and communication).	verified source-guide; annotation metadata, not claim verification
[ageint275]	Fact Sheet: New Rule on the Accessibility of Web Content and Mobile Apps Provided by State and Local Governments	A US Department of Justice fact sheet explaining the 2024 ADA Title II rule requiring state and local governments to make their web content and mobile apps accessible. It establishes WCAG 2.1 Level AA as the technical standard, applies to entities such as schools, courts, libraries, and transit agencies, and sets compliance deadlines of April 2027 for larger jurisdictions and April 2028 for smaller ones.	verified source-guide; annotation metadata, not claim verification
[ageint286]	Model Cards for Model Reporting	The arXiv abstract for "Model Cards for Model Reporting" (2018) by Mitchell, Wu, Zaldivar, and colleagues, which introduces a framework for transparent documentation of machine learning models. Model cards are short accompanying documents that report a model's benchmarked performance across varied conditions, including different cultural, demographic, and phenotypic groups, along with intended use, evaluation methodology, and deployment considerations.	verified source-guide; annotation metadata, not claim verification
[ageint287]	Datasheets for Datasets	A 2018 arXiv paper proposing 'datasheets for datasets,' a standardized documentation framework for machine learning datasets modeled on electronic component datasheets. The authors argue the field lacks consistent dataset documentation, which creates risk in high-stakes applications, and propose that datasets be accompanied by documentation covering motivation, composition, collection process, recommended uses, and test results.	verified source-guide; annotation metadata, not claim verification
[ageint292]	Assessing Risks and Impacts of AI (ARIA): Pilot Evaluation Report	The ARIA 0.1 pilot evaluation report documents NIST's methodology for systematically assessing AI applications for risks and societal impacts, using a multi-layered evaluation approach across five participating organizations and seven submitted AI applications. The pilot employed three evaluation scenarios and three testing levels: model testing, red teaming, and field testing, supplemented by dialogue annotation, tester questionnaires, and structured measurement trees.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint079]	Financial intelligence	The Wikipedia article on financial intelligence (FININT), defined as gathering information about the financial affairs of entities of interest to understand their nature, capabilities, and intentions. It outlines two core components: collection, in which Financial Intelligence Units gather transaction data and suspicious activity reports from banks, and analysis, in which specialists use data mining to detect tax evasion, money laundering, and terrorist financing.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint080]	Financial intelligence	A Wikipedia article on financial intelligence (FININT), the gathering and analysis of information about financial transactions to detect illicit activity such as money laundering, tax evasion, and terrorist financing. It distinguishes two core functions: collection of raw transaction data and suspicious activity reports by government financial intelligence units, and analysis using data-matching techniques to identify suspicious patterns.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint081]	Financial intelligence	The Citizendium 'Financial intelligence' article was never written; the page is empty. Use an authoritative alternative source for financial intelligence definitions.	verified source-guide; annotation metadata, not claim verification
[ageint082]	Financial Intelligence: A Crucial Pillar of National Security	A 2025 article by Kevin Hk Chow in Modern Economy titled "Financial Intelligence: A Crucial Pillar of National Security." It argues that Financial Intelligence (FININT) serves as a critical interface between economic systems and national security, used to detect and disrupt illicit financial networks tied to money laundering, terrorism financing, and transnational crime.	verified source-guide; annotation metadata, not claim verification
[ageint302]	National Geospatial-Intelligence Agency About Us	The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint298]	Intelligence Community Directives	Official ODNI index for Intelligence Community Directives used to locate current directive source material and preserve directive-context citations.	original source-guide; annotation metadata, not claim verification
[ageint306]	Artificial Intelligence	Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support.	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint312]	Guide on the Use of Agentic Artificial Intelligence	Official Government of Canada guide for responsible use of agentic AI, used for public-sector agent governance and accountability source support.	original source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 26; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

26.3.4 Financial Intelligence (FININT) governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 26.

26.3.5 Financial Intelligence (FININT) analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 17's governance-boundary section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Financial Intelligence and Economic-Security Due Diligence** for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. [ageint251]; [ageint252].

Curriculum topic spine: FININT Foundations: Collection, Analysis, Reporting, **Financial due-diligence typology exercise using synthetic records and compliance boundaries**, **Non-state actor indicator review with attribution caution and governance boundaries**.

Recorded source cluster; inspection and scope limits apply: [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]; [Office of Foreign Assets Control, 2019]; [Financial Action Task Force, 2021]; [Bank for International Settlements, 2021].

Conceptual depth: defensive economic intelligence that links financial-crime signals, sanctions programs, export controls, beneficial-ownership uncertainty, and supply-chain due diligence to lawful compliance and policy analysis.

Method stack: typology-to-control mapping, sanctions-program review, beneficial ownership uncertainty notes, export-control red-flag triage, supplier risk registers, and compliance-oriented analytic memos.

Composability contract: entities, transactions, sanctions programs, red flags, supplier evidence, legal constraints, and analytic judgments remain separately reviewable.

Known failure modes: evasion playbooks, threshold gaming, overconfident attribution, stale sanctions data, unverified beneficial ownership, and confusing compliance screening with intelligence certainty.

Defensive boundary: FININT and economic-security examples remain compliance, policy, and resilience oriented; they do not explain how to launder funds, evade sanctions, bypass export controls, or target real firms. Applied to **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

Anchor	Why it matters here
[Financial Crimes Enforcement Network, 2026a]	Official FININT source for AML/CFT advisories, typology awareness, sanctions-evasion warnings, red flags, and compliance-oriented monitoring. Checked as of 2026-05-21; role: curriculum_anchor.
[Financial Crimes Enforcement Network, 2026b]	Official FinCEN source for beneficial-ownership reporting, entity transparency, exemptions, and compliance-oriented analysis. Checked as of 2026-05-21; role: curriculum_anchor.
[Financial Action Task Force, 2025]	Official international AML/CFT/CPF standard for risk-based controls, beneficial ownership, information sharing, supervision, and mutual evaluation. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of Foreign Assets Control, 2026]	Official OFAC sanctions-program library for understanding legal program structure, list maintenance, and compliance-oriented economic statecraft. Checked as of 2026-05-21; role: curriculum_anchor.
[Office of Foreign Assets Control, 2019]	Official OFAC compliance framework for management commitment, risk assessment, internal controls, testing, auditing, and training. Checked as of 2026-05-21; role: curriculum_anchor.
[Financial Action Task Force, 2021]	Official FATF guidance for virtual-asset risk, VASP supervision, travel-rule compliance, and non-evasion FININT education. Checked as of 2026-05-21; role: curriculum_anchor.
[Bank for International Settlements, 2021]	Official BIS policy source for financial technology, market structure, data, network effects, regulation, privacy, and stability tradeoffs. Checked as of 2026-05-21; role: curriculum_anchor.

26.3.5.1 Financial Intelligence (FININT) evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Financial Intelligence and Economic-Security Due Diligence** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint251]; [ageint252].

26.3.6 Financial Intelligence (FININT) agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 26.

AGEINT translation is bounded by the **Financial Intelligence and Economic-Security Due Diligence** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.6.1 Financial Intelligence (FININT) permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 26.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.6.2 Financial Intelligence (FININT) excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint251]; [ageint252] and **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

26.3.7 Financial Intelligence (FININT) governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 26.

Governance is practiced as a gate on the **Financial Intelligence and Economic-Security Due Diligence** lane. Learners use the **Economic-Security Due-Diligence Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.7.1 Financial Intelligence (FININT) governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint251]; [ageint252].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Financial Intelligence and Economic-Security Due Diligence** failure modes and the **Economic-Security Due-Diligence Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

26.3.7.2 Financial Intelligence (FININT) evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Economic-Security Due-Diligence Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.7.3 Financial Intelligence (FININT) current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. [ageint251]; [ageint252].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_fincen_advisories` for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**?	FinCEN Alerts, Advisories, Notices, Bulletins, and Fact Sheets; lane `financial_economic_security`; checked 2026-05-21.	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary; Official FININT source for AML/CFT advisories, typology awareness, sanctions-evasion warnings, red flags, and compliance-oriented monitoring.
What does the module inherit from `official_fincen_boi` for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**?	Beneficial Ownership Information Reporting; lane `financial_economic_security`; checked 2026-05-21.	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary; Official FinCEN source for beneficial-ownership reporting, entity transparency, exemptions, and compliance-oriented analysis.
What does the module inherit from `official_fatf_recommendations` for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**?	The FATF Recommendations; lane `financial_economic_security`; checked 2026-05-21.	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary; Official international AML/CFT/CPF standard for risk-based controls, beneficial ownership, information sharing, supervision, and mutual evaluation.
What does the module inherit from `official_ofac_sanctions_programs` for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**?	Sanctions Programs and Country Information; lane `financial_economic_security`; checked 2026-05-21.	economic-security packet with entity evidence, sanctions program, red flags, supplier context, uncertainty, and compliance boundary; Official OFAC sanctions-program library for understanding legal program structure, list maintenance, and compliance-oriented economic statecraft.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 26; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

26.3.8 Financial Intelligence (FININT) assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 26.

26.3.9 Financial Intelligence (FININT) assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 26.

26.3.9.1 Financial Intelligence (FININT) capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries** and [ageint251]; [ageint252].

26.3.9.2 Financial Intelligence (FININT) instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries** and [ageint251]; [ageint252].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

26.3.9.3 Financial Intelligence (FININT) assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
FININT Foundations: Collection, Analysis, Reporting; **Financial due-diligence typology exercise using synthetic records and compliance boundaries**; **Non-state actor indicator review with attribution caution and governance boundaries** **The SWIFT System and Intelligence Collection**; **Cryptocurrency Records: Privacy, Transfers and Inference Limits**; **Economic Warfare and FININT as a Strategic Tool** **Money Laundering Detection: Financial due-diligence typology exercise using synthetic records and compliance boundaries**; **FININT Supporting National Security: Pillars and Methods**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: verify official list source, typology provenance, beneficial-ownership uncertainty, export-control relevance, and non-evasion framing. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude sanctions evasion, laundering methods, threshold gaming, procurement bypasses, and tailored targeting of real firms.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

26.3.10 Financial Intelligence (FININT) refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint251]; [ageint252] and **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**.

26.3.10.1 Financial Intelligence (FININT) refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. The local signals begin with [ageint251]; [ageint252].

26.3.10.2 Financial Intelligence (FININT) claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**, and the source spine for these checks begins with [ageint251]; [ageint252].

26.3.11 Financial Intelligence (FININT) reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint251]; [ageint252].

Contextual source routes. For module 17's review-checklist section, the **Financial Intelligence and Economic-Security Due Diligence** catalog routes include [Financial Crimes Enforcement Network, 2026a]; [Financial Crimes Enforcement Network, 2026b]; [Financial Action Task Force, 2025]; [Office of Foreign Assets Control, 2026]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries**. [ageint251]; [ageint252].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

26.3.12 Financial Intelligence (FININT) learning-path links: module map, overview, and curriculum atlas

These links keep **FININT Foundations: Collection, Analysis, Reporting; Financial due-diligence typology exercise using synthetic records and compliance boundaries** paired with the orientation atlas, the parent unit, and the previous and next modules, so a reader can trace which claims and caveats are inherited rather than re-derived here. Anchored at [ageint251]; [ageint252].

Section 2, Section 24, Section 25, Section 27

27 PSYCHOLOGICAL OPERATIONS AND INFLUENCE

27.1 PSYCHOLOGICAL OPERATIONS AND INFLUENCE learning spine and source route: unit purpose, module order, and evidence handoff

Navigation. Parent section: Section 27.

27.1.1 information-integrity and influence analysis discipline spine: domain question and learning focus

Navigation. Parent section: Section 27.
This unit teaches **information-integrity and influence analysis**. Influence lessons analyze narratives, provenance, audience harm, attribution caution, and transparent resilience education without persuasion design.

27.1.2 information-integrity and influence analysis source-use contract: citation roles and evidence limits

Navigation. Parent section: Section 27.
Use CISA and NATO anchors for foreign influence, information threats, public resilience, and transparent mitigation claims.

27.1.3 information-integrity and influence analysis practice artifact: recurring packet and retained evidence

Navigation. Parent section: Section 27.
The recurring practice artifact is a **narrative-risk and resilience map** that draws on narrative provenance chain, audience-harm note, attribution caveat, and transparent response option. The unit keeps its learning spine explicit. Classroom packet: six synthetic posts repeat a claim that a fictional museum will charge admission; five copy one post, while a dated museum notice limits a fee to a special exhibition.

1. Code the proposition, date, claimed source, and distinction between general admission and the exhibition.
2. Build a repost tree and compare the claim with the notice without collecting audience identities.
3. Remove the five copies: apparent volume falls, but independent support for the broader claim remains absent.
4. Deliver a narrative-risk map judging the general-admission claim unsupported by this packet, with confusion about scope as a credible alternative to deliberate deception. Authorship, sponsorship, reach, and intent remain unresolved. Draft a transparent classroom correction quoting the fee scope, not a targeted persuasion plan. Stop if a proposed response profiles an audience or assigns an actor; hand release wording to the instructor.

27.1.4 information-integrity and influence analysis safety boundary: accountable, synthetic, and evidence-bounded limits

No covert persuasion, microtargeting, manipulation, or campaign design.
This unit introduces the part's governing question, evidence artifacts, source-support spine, and capstone thread before the individual modules begin. [ageint238]; [ageint239].
Learners carry one unit capstone thread through the part: define an accountable intelligence question, bind it to source-quality constraints, produce a reviewable artifact, test the artifact against failure modes, and hand it off with enough context for another analyst or instructor to audit. The capstone remains public, synthetic, or owned-lab throughout; its first source anchors are [ageint238]; [ageint239].
This unit's deliverables are a source-canon card, claim/evidence ledger, safe-practice lab packet, failure-mode note, instructor rubric, and debrief memo. The full source-lane and evidence-package ledgers appear in the orientation and appendices; this unit introduction keeps only the learner-facing spine for [ageint238]; [ageint239].
This unit's safety gates are documented authority for the exact activity, rights review, permitted data provenance, tool allowlisting, human oversight, and evidence-bounded output. A missing or unknown gate pauses the affected activity, including processing or sharing already supplied data. A written risk exception cannot waive authority or rights. A replacement tabletop may begin only after independently permitted synthetic inputs, tools and review responsibilities are established; it does not inherit permission from the stopped activity. Inspect the applicable source context: [ageint238]; [ageint239].
Capstone thread:

Phase	Artifact	Review gate
Question	accountable learning question and excluded-action list	instructor confirms scope, allowed data, and rights impact
Source canon	source-lane map with guide citations, verified anchors, and refresh dates	citation keys resolve and source identity lock remains stable
Evidence ledger	claim, evidence, uncertainty, confidence, and reviewer register	every material claim has a source, caveat, and owner
Safe lab	synthetic or public dataset packet, tool allowlist, and stop conditions	no live target, private data, external action, or unsafe cyber-physical step
Assurance	evaluation rubric, failure-mode drill, rights map, and remediation note	human reviewer signs off before presentation or reuse
Debrief	capstone memo with lessons, residual risk, refresh triggers, and handoff owner	all unresolved questions and future approvals are explicit

Research lane: Cognitive Security and Influence Resilience. Core anchors: [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]. Conceptual focus: protecting attention, belief formation, and decision quality without turning resilience education into manipulation. Composability contract: separate descriptive analysis, normative assessment, response options, and protected-audience considerations. **Practice lens:** Cognitive-Resilience Lens; How does the module protect autonomy, attention, trust, and decision quality without designing persuasion? [ageint238]; [ageint239].

27.1.5 PSYCHOLOGICAL OPERATIONS AND INFLUENCE visual navigation and module map: evidence flow, order, and safety cues

The unit uses Figure 64 and Figure 65 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 26, Section 28.

27.1.6 PSYCHOLOGICAL OPERATIONS AND INFLUENCE module roster and source-lane inventory: citations, lanes, and learner route

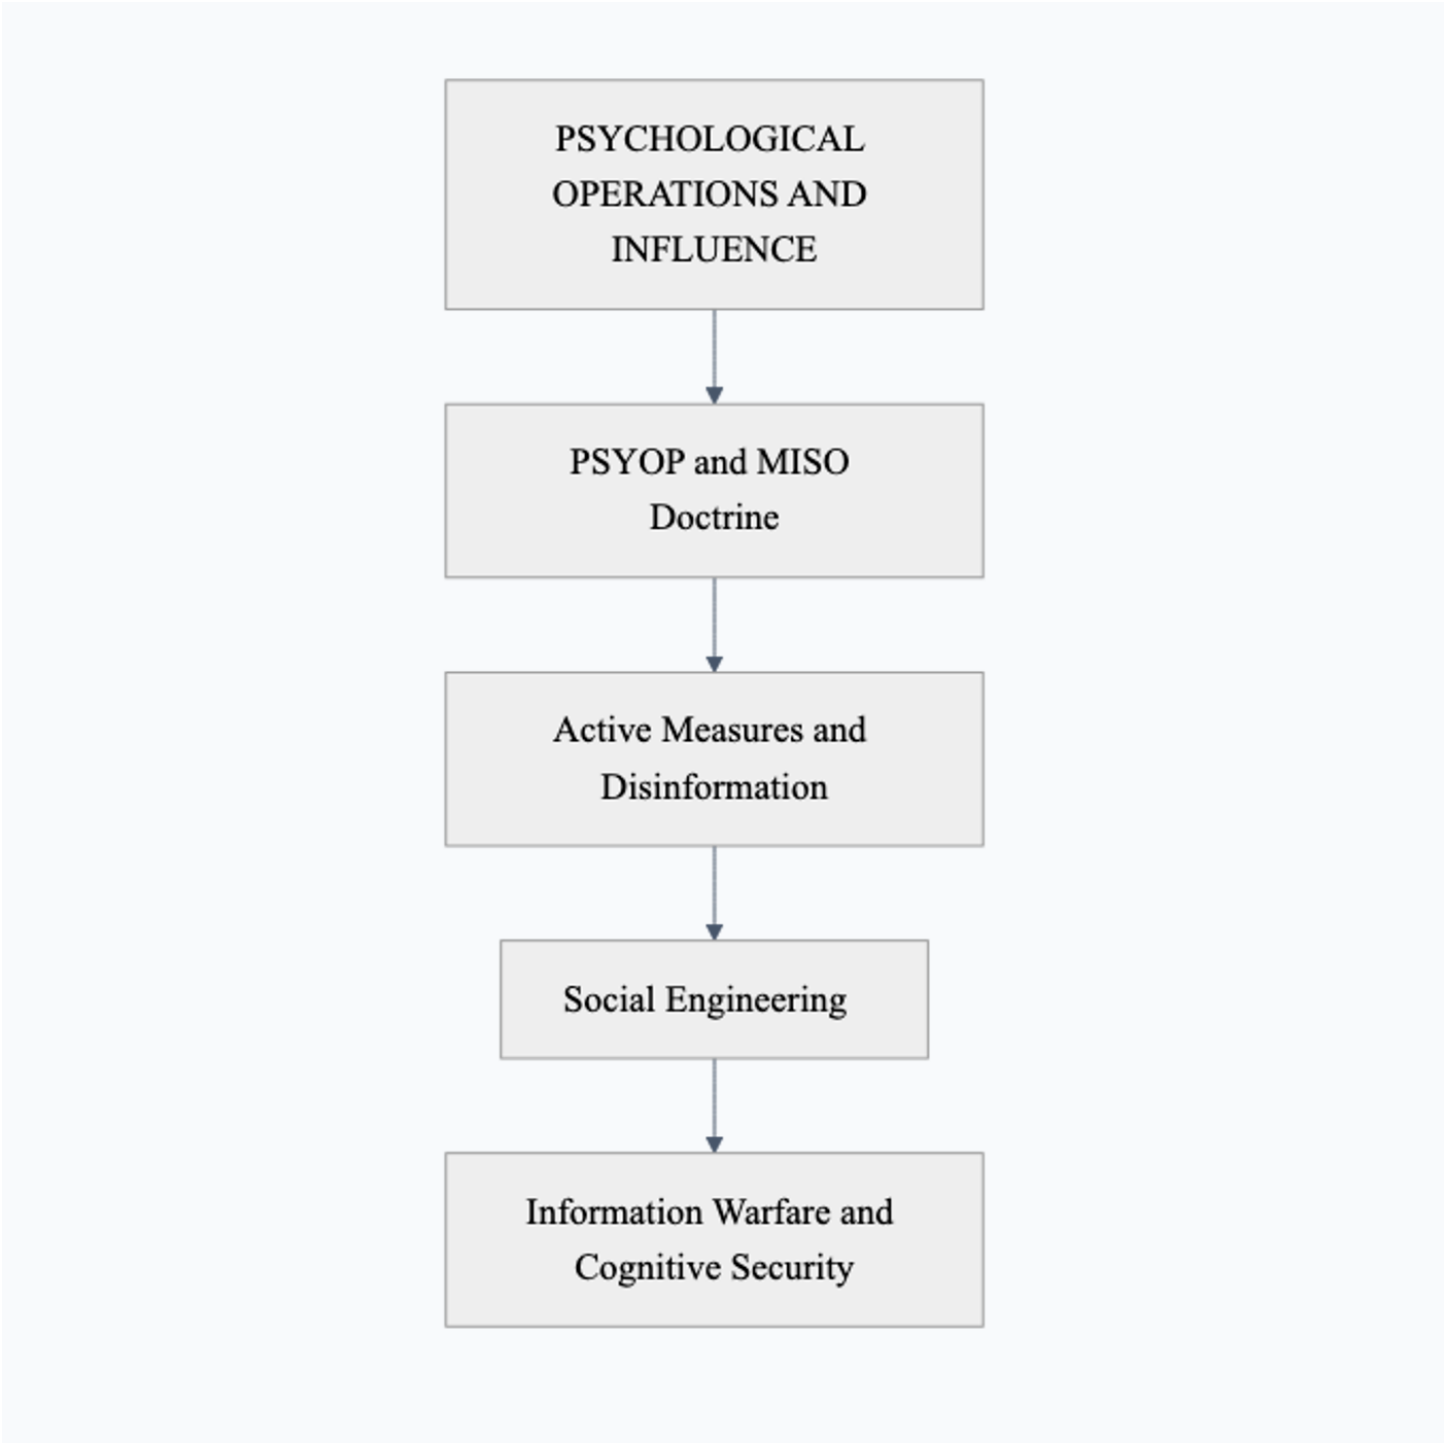

Figure 64: The PSYCHOLOGICAL OPERATIONS AND INFLUENCE module map traces the part's chapters as a linear reading sequence. Its reader value is to make 4 module nodes in the unit's ordered, source-backed reading sequence from its first module to its last visible at a glance, with the psychological operations and influence section as the source section and defensive review as the boundary.

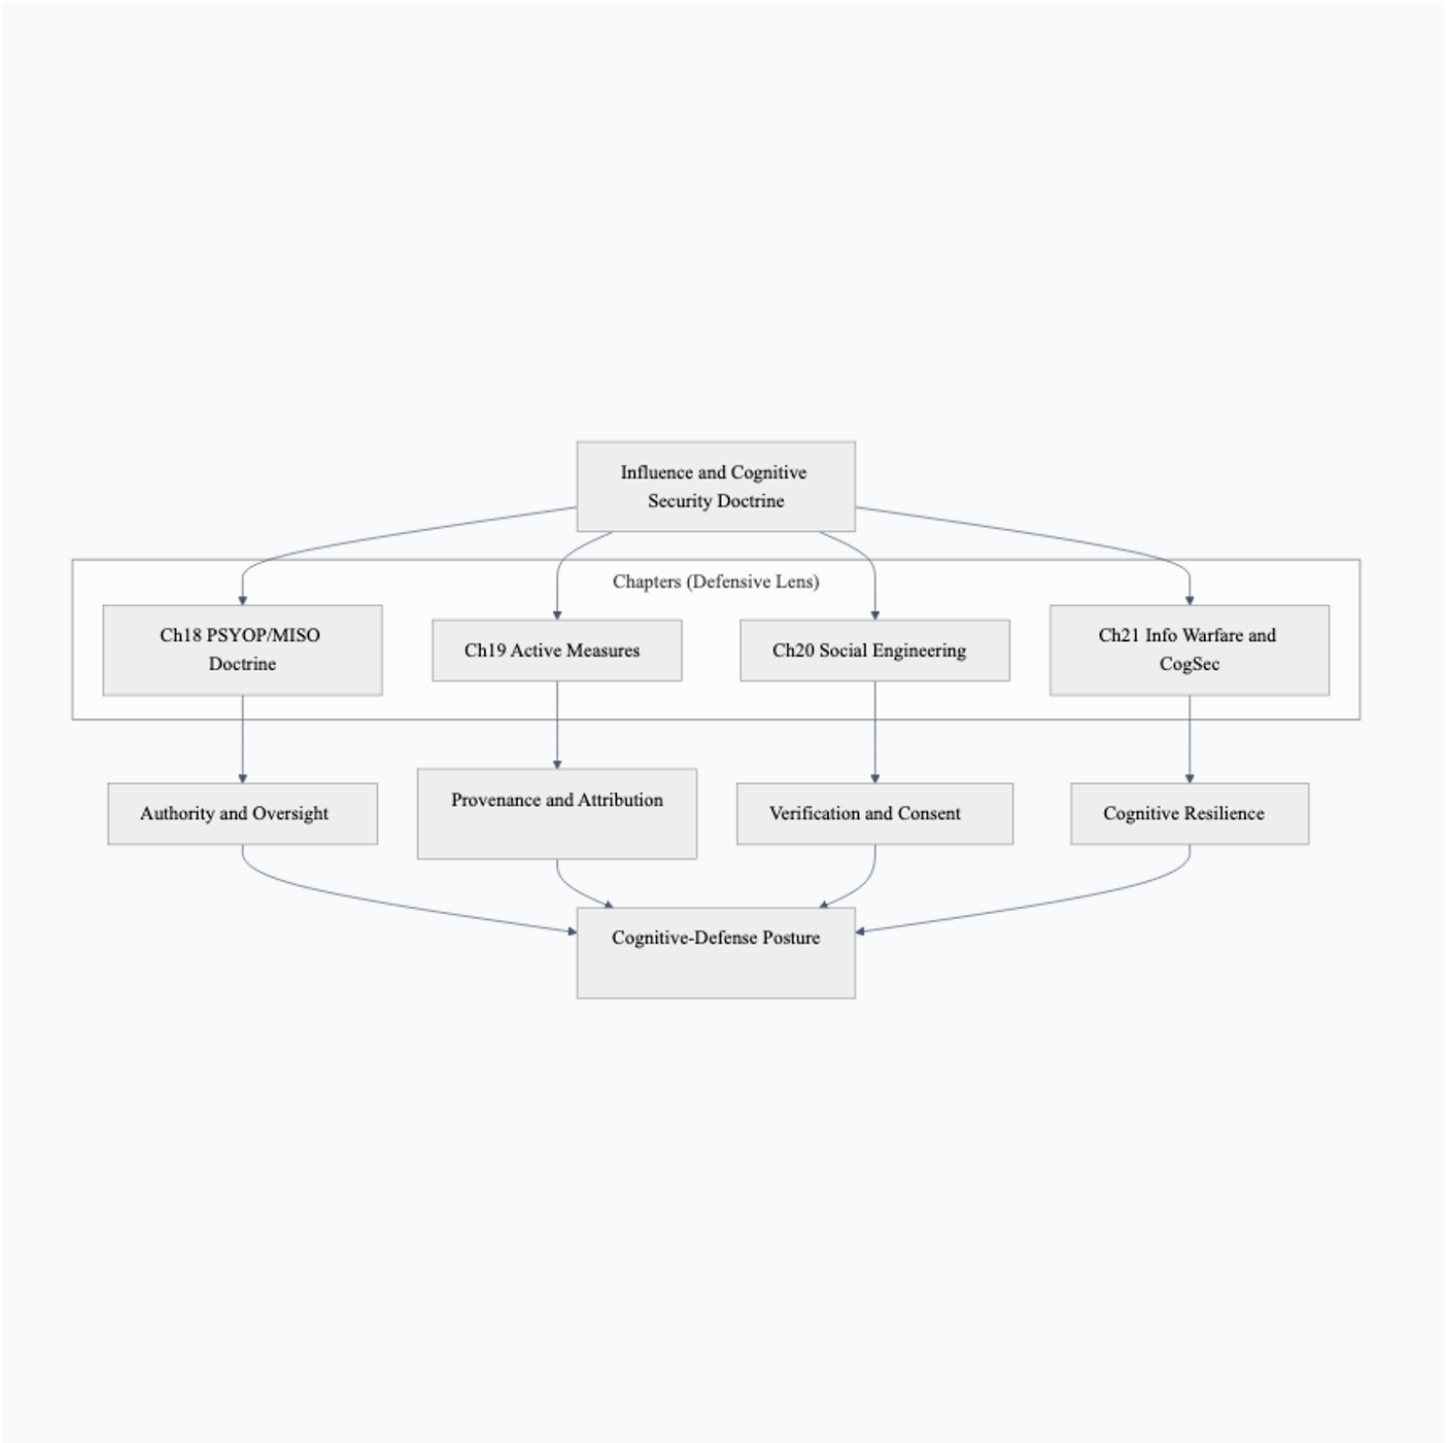

Figure 65: Studied defensively, this Part is a doctrine-and-countermeasure spine: each influence chapter is matched to the detection signals and cognitive-resilience controls that defend against it. In the psychological operations and influence section, it lets readers compare Influence and Cognitive Security Doctrine, Chapters (Defensive Lens), Ch18 PSYOP/MISO Doctrine, and Ch19 Active Measures so the visual functions as a traceable course aid rather than an unscoped assertion.

Module	Section reference	Source spine
PSYOP and MISO Doctrine	Section 28	[ageint238]; [ageint239]; [ageint242]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint083]; [ageint084]; [ageint085]; [ageint086]; [ageint087]; [ageint302]; [ageint297]; [ageint308]; [ageint311].
Active Measures and Disinformation	Section 29	[ageint238]; [ageint239]; [ageint240]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint088]; [ageint089]; [ageint090]; [ageint091]; [ageint092]; [ageint093]; [ageint094]; [ageint095]; [ageint096]; [ageint308]; [ageint311].
Social Engineering	Section 30	[ageint238]; [ageint240]; [ageint242]; [ageint280]; [ageint281]; [ageint282]; [ageint292]; [ageint295]; [ageint296]; [ageint097]; [ageint098]; [ageint099]; [ageint100]; [ageint300]; [ageint304]; [ageint306]; [ageint308]; [ageint311].
Information Warfare and Cognitive Security	Section 31	[ageint238]; [ageint239]; [ageint244]; [ageint273]; [ageint276]; [ageint285]; [ageint286]; [ageint290]; [ageint294]; [ageint101]; [ageint102]; [ageint103]; [ageint104]; [ageint105]; [ageint095]; [ageint096]; [ageint106]; [ageint003]; [ageint107].

28 PSYOP and MISO Doctrine

28.0.1 PSYOP and MISO Doctrine figures and course links: visual evidence, source flow, and navigation

The module uses Figure 66 and Figure 64 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 27, Section 29.
This module teaches the **Cognitive Security and Influence Resilience** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint239].

28.1 Cognitive Security and Influence Resilience frame for PSYOP and MISO Doctrine: source context, topic focus, and reader task

Navigation. Parent section: Section 28.

28.1.1 PSYOP and MISO Doctrine orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 28.

28.1.2 PSYOP and MISO Doctrine conceptual primer: source context, core model, and reader task

This chapter teaches cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The chapter uses **Cognitive-Resilience Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.
The central distinction is to separate analysis of influence from persuasion design. Core topics include **Cognitive influence-analysis case review using sample materials; Military Information Support Operations (MISO): JP 3-13.2; Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint239].
Learners move from vocabulary and the **Cognitive-Resilience Lens** distinction through topic lessons on **Cognitive influence-analysis case review using sample materials** with evidence and misconception checks, then assemble a **narrative-risk map with provenance, uncertainty, audience harms, and response options** with safety and rights gates.

28.1.3 PSYOP and MISO Doctrine learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 28.

- Connect **Cognitive influence-analysis case review using sample materials and Military Information Support Operations (MISO): JP 3-13.2** to **Cognitive Security and Influence Resilience** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate analysis of influence from persuasion design; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as counter-messaging as manipulation, overclaiming intent, pathologizing audiences, and collapsing uncertainty into moral certainty, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: practice uses benign simulations and resilience education; it does not create persuasion campaigns, impersonation, or deception plans.

28.1.4 PSYOP and MISO Doctrine core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 28.

Term	Working definition
Narrative provenance	where a claim, frame, or story came from and how it spread
Prebunking	transparent education about misleading patterns before exposure; its effectiveness and transfer require evidence rather than assumption
Audience harm	a privacy, dignity, autonomy, or trust risk for people receiving information
Attribution caution	the rule that intent and origin claims need strong evidence
Resilience response	a transparent education, correction, or process improvement that avoids manipulation
MISO boundary	the separation between this classroom analysis and authorized military influence activities; MISO is not defined simply as covert messaging
Inoculation	an approach intended to build recognition of misleading tactics; it does not imply immunity or proven efficacy for a particular audience

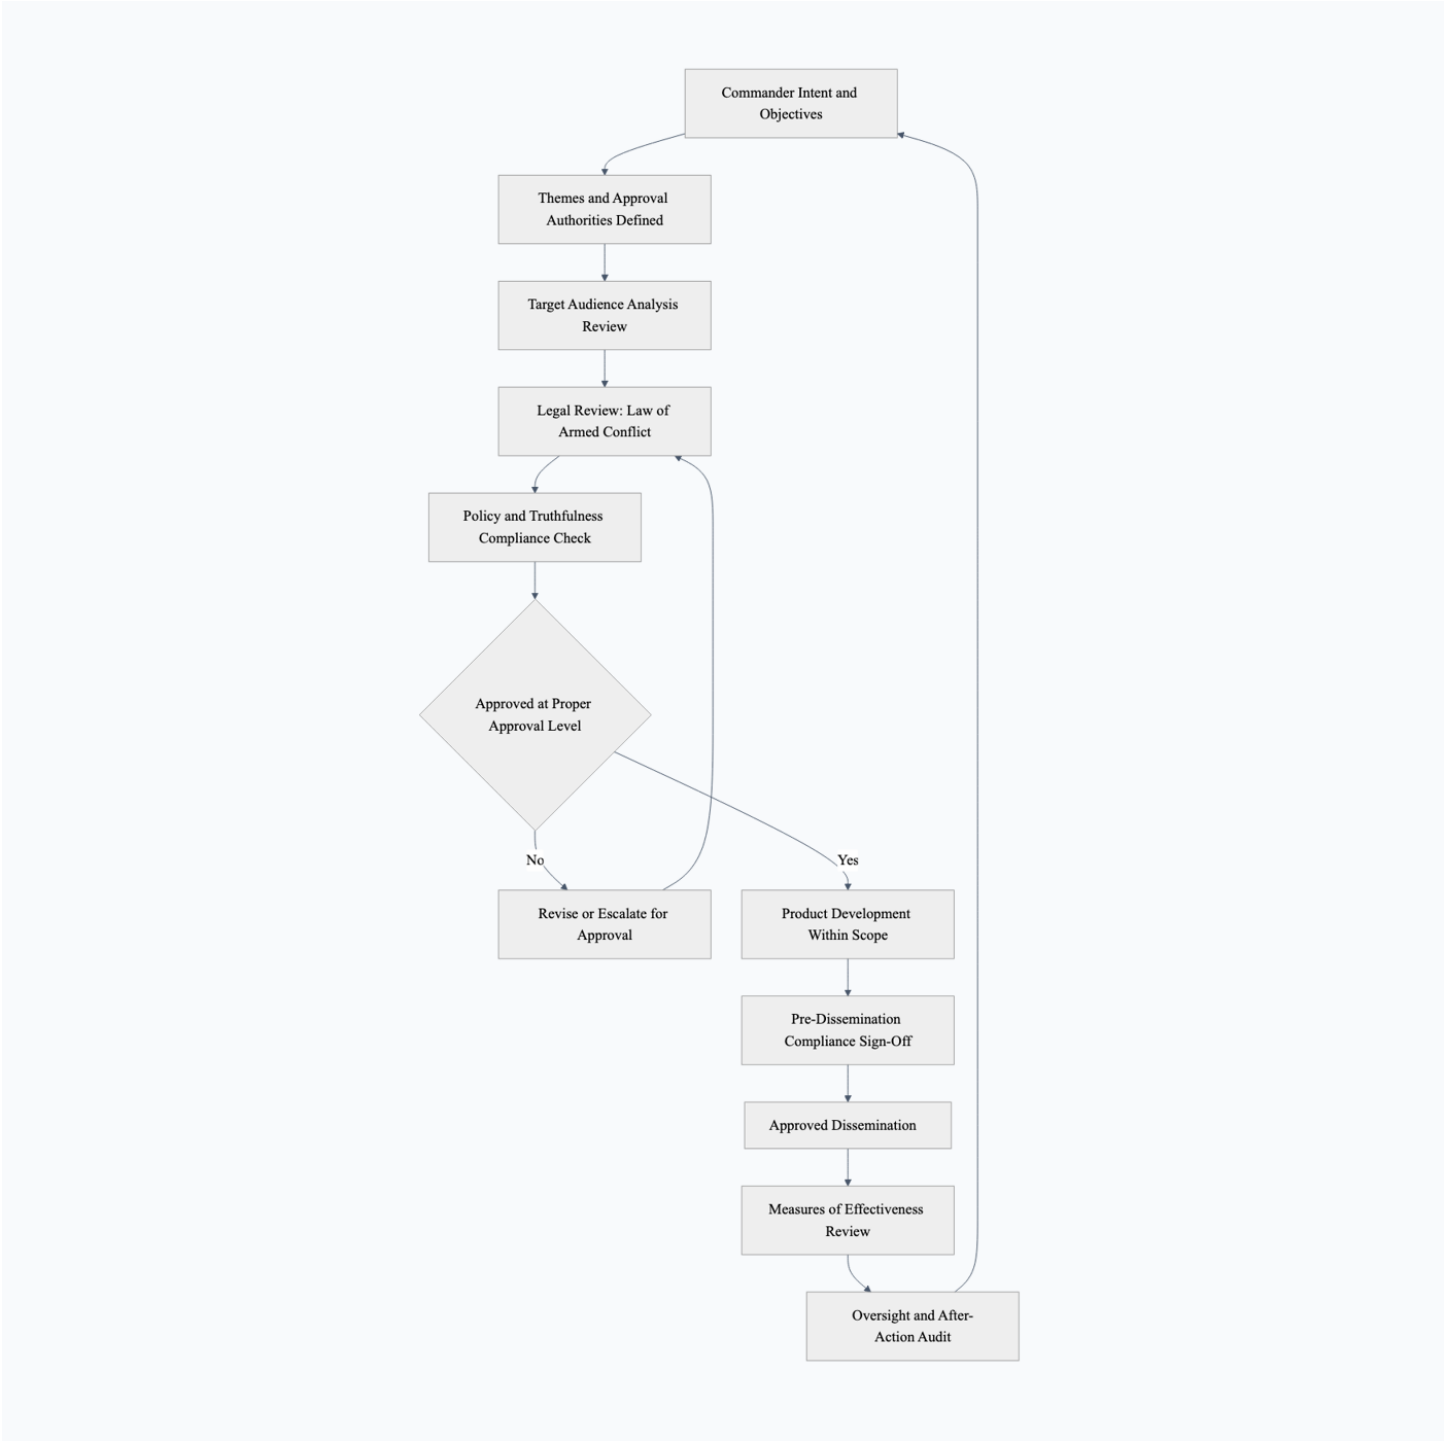

Figure 66: A doctrinal governance view showing how influence products must pass through legal, policy, and approval-authority gates before approved dissemination and after-action audit. The captioned view belongs to the psychological operations and influence / psyop and miso doctrine section and should be read as a map of Commander Intent and Objectives, Themes and Approval Authorities Defined, Target Audience Analysis Review, and Legal Review: Law of Armed Conflict, not as a capability score or live-task instruction.

28.2 Cognitive-Resilience Lens path for PSYOP and MISO Doctrine: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 28.

28.2.1 PSYOP and MISO Doctrine practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 28.

28.2.2 PSYOP and MISO Doctrine topic lessons: source-backed concepts and transfer tasks

PSYOP and MISO Doctrine builds cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The sequence opens with **Cognitive influence-analysis case review using sample materials**, **Military Information Support Operations (MISO): JP 3-13.2**, **Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials** and applies the **Cognitive-Resilience Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 64; module overview Section 28; curriculum atlas Section 2.

Contextual source routes. For module 18's topic-lessons section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

28.2.2.1 Lesson 1: Cognitive influence-analysis case review using sample materials

Concept. Cognitive influence-analysis case review using sample materials focuses on transparent resilience education: provenance, audience harm, attribution caution, and non-manipulative response options.

Worked reasoning and limits. Read these as dated doctrinal editions: record issuer, publication date, mission, intended audience and approval language separately. Doctrine states intended institutional practice, not observed success or present permission; compare the actual editions before claiming continuity or change [ageint083, ageint084].

Why it matters. Analysts use **Cognitive influence-analysis case review** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Cognitive influence-analysis case review using sample materials**: [ageint083] and [ageint084]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Cognitive influence-analysis case review**, inspect the original passages. Curriculum annotation for [ageint083]: Joint Publication 3-53, the US Department of Defense joint doctrine for psychological operations. It establishes organizational structure, command relationships, planning processes, and approval authorities for integrating psychological operations into joint military campaigns and peacetime activities. Curriculum annotation for [ageint084]: Joint Publication 3-53, Doctrine for Joint Psychological Operations (Joint Chiefs of Staff, 10 July 1996). This US military doctrine document establishes the doctrinal basis for planning and conducting psychological operations in support of joint military operations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cognitive influence-analysis case review**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Cognitive influence-analysis case review using**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Cognitive influence-analysis case review** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Cognitive influence-analysis case review**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **Cognitive influence-analysis case review** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

28.2.2.2 Lesson 2: Military Information Support Operations (MISO): JP 3-13.2

Concept. Military Information Support Operations (MISO): JP 3-13.2 studies influence doctrine as audience analysis, message integrity, and ethics—not as manipulation technique.

Worked reasoning and limits. MISO is a doctrinal term, not a synonym for every covert message or for this course's prohibition on manipulation. Compare the dated document's mission and approval conditions with public-affairs responsibilities; an educator cannot infer authority from a public document or classify a notice as MISO merely because it is persuasive [ageint085].

Why it matters. Military Information Support Operations (MISO) matters in the **Cognitive Security and Influence Resilience** lane because information-integrity analysis and resilience education evidence must stay separate from judgment; counter-messaging as manipulation is a common failure.

Source support. Inherited source-guide context for **Military Information Support Operations (MISO): JP 3-13.2**: [ageint085]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Military Information Support Operations (MISO)**, inspect the original passages. No displayable curriculum annotation is available for [ageint085]. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Military Information Support Operations (MISO)**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Military Information Support Operations**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Military Information Support Operations (MISO)** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Military Information Support Operations (MISO): JP 3-13.2 can be used while ignoring the rule to separate analysis of influence from persuasion design.

Transfer task. Transfer **Military Information Support Operations (MISO)** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

28.2.2.3 Lesson 3: Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials

Concept. Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials studies influence doctrine as audience analysis, message integrity, and ethics—not as manipulation technique.

Worked reasoning and limits. A mirrored tactical manual is evidence of its text only after edition and provenance checks; hosting on Scribd does not establish authenticity, release authority or currency. Study historical institutional constraints and audience harms, not tactical procedures, audience exploitation or campaign construction.

Why it matters. Analysts use **Tactical PSYOP TTP** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials**: [ageint086]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Tactical PSYOP TTP**, inspect the original passages. Curriculum annotation for [ageint086]: A U.S. military field manual, FM 3-05.302, providing doctrine for tactical psychological operations at the unit level. The roughly 255-page document covers the organization of these units, command relationships when supporting joint forces, a multi-phase product development and assessment process, and how intelligence supports such operations. It serves as a comprehensive training and reference document for personnel involved in tactical influence operations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Tactical PSYOP TTP**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Tactical PSYOP TTP**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Tactical PSYOP TTP** work as a **narrative-risk and resilience map** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **Tactical PSYOP TTP**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **Tactical PSYOP TTP** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

28.2.2.4 Lesson 4: FM 3-05 301: Cognitive influence-analysis case review using sample materials

Concept. FM 3-05 301: Cognitive influence-analysis case review using sample materials focuses on transparent resilience education: provenance, audience harm, attribution caution, and non-manipulative response options.

Worked reasoning and limits. A process diagram describes a proposed sequence, whereas an evaluation needs observations linking an intervention to outcomes and credible alternatives. Ask which approvals and assumptions the historical text specifies and which implementation facts remain absent; do not turn the sequence into a classroom influence plan [ageint087].

Why it matters. FM 3-05 301: Cognitive influence-analysis case review using sample materials matters in the **Cognitive Security and Influence Resilience** lane because information-integrity analysis and resilience education evidence must stay separate from judgment; treating resilience labels as permission to skip provenance review is a common failure.

Source support. Inherited source-guide context for **FM 3-05 301: Cognitive influence-analysis case review using sample materials**: [ageint087]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **FM 3-05 301: Cognitive influence-analysis case review using sample materials**, inspect the original passages. Curriculum annotation for [ageint087]: … These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **FM 3-05 301**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **FM 3-05 301**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **FM 3-05 301: Cognitive influence-analysis case review using sample materials** work as a **narrative-risk and resilience map** that records its evidence, the residual uncertainty, the named reviewer, and the stop condition.

Misconception check. Correct the misconception about **FM 3-05 301: Cognitive influence-analysis case review using sample materials**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Apply this module's safe boundary for **FM 3-05 301: Cognitive influence-analysis case review using sample materials** to another artifact while keeping information-integrity analysis and resilience education and reviewer ownership explicit.

28.2.2.5 Lesson 5: Historical audience analysis: protection and evidentiary limits

Concept. Historical audience analysis: protection and evidentiary limits is taught in the **Cognitive Security and Influence Resilience** lane. The analytic distinction is to separate analysis of influence from persuasion design. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. The inherited heading names a historical practice; this lesson instead examines why language access, voluntary participation and independent judgment matter. Do not infer a person's vulnerability, motive or traits from group membership or build susceptibility segments. NGA's organizational page is not evidence for TAA; ICD 203 supports reasoning standards, not psychological validation [ageint297].

Why it matters. Without explicit treatment of **Historical audience analysis**, counter-messaging as manipulation undermines information-integrity analysis and resilience education review; the lesson builds the habit to separate analysis of influence from persuasion design.

Source support. Inherited source-guide context for **Historical audience analysis: protection and evidentiary limits**: [ageint302] and [ageint297]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Historical audience analysis**, inspect the original passages. Curriculum annotation for [ageint302]: The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety. Curriculum annotation for [ageint297]: Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical audience analysis**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Historical audience analysis**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical audience analysis** work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Historical audience analysis: protection and evidentiary limits replaces human review whenever

evidence looks plausible.

Transfer task. Transfer **Historical audience analysis** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

28.2.2.6 Lesson 6: PSYOP in Full-Spectrum Operations: Cognitive influence-analysis case review using sample materials

Concept. PSYOP in Full-Spectrum Operations: Cognitive influence-analysis case review using sample materials studies influence doctrine as audience analysis, message integrity, and ethics—not as manipulation technique.

Worked reasoning and limits. Separate a document's stated objective from the analyst's inference about a message and from measured audience effects. Similar themes may reflect shared facts, ordinary copying or public debate; neither resemblance nor disagreement establishes a coordinated influence operation. Historical mission language supplies no current authority to target learners.

Why it matters. Analysts use **PSYOP in Full-Spectrum Operations** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **PSYOP in Full-Spectrum Operations: Cognitive influence-analysis case review using sample materials**: [ageint086]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **PSYOP in Full-Spectrum Operations**, inspect the original passages. Curriculum annotation for [ageint086]: A U.S. military field manual, FM 3-05.302, providing doctrine for tactical psychological operations at the unit level. The roughly 255-page document covers the organization of these units, command relationships when supporting joint forces, a multi-phase product development and assessment process, and how intelligence supports such operations. It serves as a comprehensive training and reference document for personnel involved in tactical influence operations. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **PSYOP in Full-Spectrum Operations**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **PSYOP in Full-Spectrum Operations**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **PSYOP in Full-Spectrum Operations** work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **PSYOP in Full-Spectrum Operations**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Transfer **PSYOP in Full-Spectrum Operations** from this module to a second motif by preserving information-integrity analysis and resilience education, replacing action with audit, and naming the blocked use.

28.2.2.7 Lesson 7: Historical media products: accessibility and transparent correction

Concept. Historical media products: accessibility and transparent correction is taught in the **Cognitive Security and Influence Resilience** lane. The analytic distinction is to separate analysis of influence from persuasion design. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Completed offline case: synthetic record N1 says a museum opens at 09:00; N2 is an undated flyer saying 10:00; N3 is a dated authorized schedule confirming 09:00 but covering weekdays only. Applying Section 3.6, the filled result is weekday opening = 09:00 (N1/N3), weekend opening = unknown, and deliberate deception = unsupported; N2's missing date is the weakest link, with an old schedule a benign alternative. A withheld N4 identifies the flyer as last year's weekend notice, so revise from apparent conflict to different temporal scope; offer a dated, accessible correction and a choice to check the schedule, not an audience-targeting plan. CISA/NATO guidance provides defensive context, not evidence that any particular medium causes compliance.

Why it matters. Analysts use **Historical media products** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that counter-messaging as manipulation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Historical media products: accessibility and transparent correction**: [ageint308] and [ageint311]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Historical media products**, inspect the original passages. Curriculum annotation for [ageint308]: An archived CISA publication, "CISA Insights: Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure," providing guidance on the threat that foreign influence campaigns pose to U.S. critical infrastructure. Curriculum annotation for [ageint311]: An official NATO topic page describing the Alliance's approach to countering information threats, defined as intentional, manipulative, and coordinated activities by state and non-state actors including disinformation and propaganda. It explains why such threats matter for democratic processes and institutional trust, and outlines a four-part framework of understanding, preventing, containing, and recovering. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical media products**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Historical media products**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical media products** work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Historical media products: accessibility and transparent correction is optional whenever separate analysis of influence from persuasion design feels inconvenient.

Transfer task. Transfer **Historical media products** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

28.2.3 PSYOP and MISO Doctrine worked safe example: synthetic inputs, evidence, and review

Worked example: a sample public-library class evaluates a synthetic rumor about a community service and compares transparent correction options. [ageint238]; [ageint239].

Contextual source routes. For module 18's worked-example section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **information-integrity and influence analysis**. Learners use a **narrative-risk and resilience map** and keep this boundary visible: No covert persuasion, microtargeting, manipulation, or campaign design.

Frame. The classroom question centers on **Cognitive influence-analysis case review using sample materials**. Excluded actions stay explicit, and the **Cognitive-Resilience Lens** planning question is: How does the module protect autonomy, attention, trust, and decision quality without designing persuasion?

Inputs. For the **Cognitive influence-analysis case review using sample materials** scenario, use six fictional museum-fee posts, five copying one original, a dated notice limiting a fee to a special exhibition, and a classroom media-literacy rubric. The Cognitive-Resilience Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Cognitive influence-analysis case review using sample materials**, students first extract the claim and distinguish general admission from the exhibition; then trace the copying tree and compare scope and dates with the notice; remove the five copies as a negative control, requiring the evidentiary judgment to remain unchanged. Consider ordinary scope confusion alongside intentional deception; stop attribution or audience profiling and hand a transparent, source-linked correction to the instructor for release review. Pause whenever an inference about Cognitive influence-analysis case review using sample materials appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a narrative-risk map marking the general-admission claim unsupported by the packet, a correction quoting the exhibition-only scope, and unresolved intent, sponsorship, reach, and real audience effects; this fixture supports a correction decision, not a measured resilience benefit Retain it as the **narrative-risk and resilience map** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Cognitive influence-analysis case review using sample materials** as "Cognitive-Resilience Lens confirms it" is not enough. The revision ties the claim to information-integrity analysis and resilience education, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Cognitive influence-analysis case review using sample materials** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

28.2.4 PSYOP and MISO Doctrine practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Cognitive-Resilience Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

Contextual source routes. For module 18's practice-sequence section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Cognitive influence-analysis case review using sample materials, Military Information Support Operations: JP 3-13.2, Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Cognitive Security and Influence Resilience** lane.
2. Frame	Answer the lens question: How does the module protect autonomy, attention, trust, and decision quality without designing persuasion?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Cognitive influence-analysis case review using sample materials: narrative-risk map with provenance, uncertainty, audience harms, and response options.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the narrative-risk and resilience map fields for Cognitive influence-analysis case review using sample materials.	Unit profile note.	Evidence artifacts include narrative provenance chain, audience-harm note.
4. Challenge	Test the misconception that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.	Failure-mode note.	The artifact applies the key distinction: separate analysis of influence from persuasion design.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

28.2.4.1 PSYOP and MISO Doctrine instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. [ageint238]; [ageint239].

28.2.4.2 PSYOP and MISO Doctrine extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 28.

Have learners swap artifacts and apply the **Cognitive-Resilience Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.2.5 PSYOP and MISO Doctrine knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 28.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Cognitive influence-analysis case review using sample materials**.
2. Transfer the **Cognitive-Resilience Lens** artifact from **Cognitive influence-analysis case review using sample materials** to the final topic, **Historical media products: accessibility and transparent correction**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Cognitive Security and Influence Resilience** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which correction informs readers without audience manipulation, unverified attribution, or assuming authority for military influence activities?
5. Correct this misconception: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

28.2.5.1 PSYOP and MISO Doctrine answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Cognitive influence-analysis case review using sample materials** without source evidence, uncertainty, or a safe transfer task.

28.3 PSYOP and MISO Doctrine assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 28.

28.3.1 PSYOP and MISO Doctrine evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 28.

28.3.2 PSYOP and MISO Doctrine transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 28.

28.3.2.1 PSYOP and MISO Doctrine lineage and source tradition: profile, concepts, and first anchors This sits in the **Cognitive Security and Influence Resilience** lineage: protecting attention, belief formation, and decision quality without turning resilience education into manipulation. [ageint238]; [ageint239].

28.3.2.2 PSYOP and MISO Doctrine working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 28.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**, with provenance and reviewability throughout.

28.3.2.3 PSYOP and MISO Doctrine knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** benign fictional messages, factual source cards, provenance, consent conditions, and false-alarm controls. [ageint238]; [ageint239].
- **Transforms:** separate truth, technique cues, intent and effects; compare ordinary error; transparently review corrections; and preserve learner agency.
- **Outputs:** bounded claim and provenance assessment, recognition and false-alarm record, educational correction, or unresolved attribution.
- **Failure modes:** technique recognition as truth, affect as hostile intent, detector authority, covert persuasion, or assumed durable immunity.

28.3.2.4 PSYOP and MISO Doctrine transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 28.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.
- **Evidence contract:** keep the **Cognitive Security and Influence Resilience** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as bounded claim and provenance assessment, recognition and false-alarm record, educational correction, or unresolved attribution that another reviewer can audit.

28.3.2.5 PSYOP and MISO Doctrine profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 28.

The matched profile emphasizes protecting attention, belief formation, and decision quality without turning resilience education into manipulation. The method stack is claim decomposition, narrative provenance, inoculation framing, bias checks, audience-risk review, and after-action learning; the local topic cluster is **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.3 PSYOP and MISO Doctrine evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 28.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Cognitive Security and Influence Resilience** profile tells reviewers what evidence is strong enough for the module artifact built around **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.3.1 PSYOP and MISO Doctrine guide source spine: inherited keys and local citation roles Primary guide citations: [ageint238]; [ageint239]; [ageint242]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint083]; [ageint084]; [ageint085]; [ageint086]; [ageint087]; [ageint302]; [ageint297]; [ageint308]; [ageint311].

28.3.3.2 PSYOP and MISO Doctrine verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint238]; [ageint239].

Tier	What counts	How it is used
Source guide	[ageint238]; [ageint239]; [ageint242]; [ageint276]; [ageint277]; [ageint284]; [ageint288]; [ageint289]; [ageint293]; [ageint083]; [ageint084]; [ageint085]; [ageint086]; [ageint087]; [ageint302]; [ageint297]; [ageint308]; [ageint311].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 18's source-canon section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2** and [ageint238]; [ageint239], but only directly verified source URLs are encoded as citations.

28.3.3.3 PSYOP and MISO Doctrine intelligence practice lens: evidence artifact and safety check Practice lens: **Cognitive-Resilience Lens** for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. [ageint238]; [ageint239].

Planning question: How does the module protect autonomy, attention, trust, and decision quality without designing persuasion?

Evidence artifact: narrative-risk map with provenance, uncertainty, audience harms, and response options.

Validation rule: distinguish observation, attribution, impact assessment, and resilience response. Applied to **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

Handoff contract: handoff supports transparency, education, and resilience, not microtargeted influence or deception.

Safety check: exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning.

28.3.3.4 PSYOP and MISO Doctrine runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 28.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	18.99	18.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind PSYOP and MISO Doctrine to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Bounded autonomy, procurement, incident-response, and assurance studio	18.101	18.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for PSYOP and MISO Doctrine	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Model-card, recoverability, retention, and learner-support evidence package	18.102	18.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for PSYOP and MISO Doctrine	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	18.1	18.1 source title transformed into safe curriculum treatment; original: Joint PSYOP Doctrine: JP 3-53 (1996 and 2003)	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Military Information Support Operations (MISO): JP 3-13.2	18.2	18.2 Military Information Support Operations (MISO): JP 3-13.2	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Cognitive influence-analysis case review using sample materials	18.3	18.3 source title transformed into safe curriculum treatment; original: Tactical PSYOP TTP: FM 3-05.302	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	18.4	18.4 source title transformed into safe curriculum treatment; original: FM 3-05.301: PSYOP Process Tactics and Techniques	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical audience analysis: protection and evidentiary limits	18.5	18.5 Historical audience analysis: protection and evidentiary limits	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	18.6	18.6 source title transformed into safe curriculum treatment; original: PSYOP in Full-Spectrum Operations: Themes and Objectives	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical media products: accessibility and transparent correction	18.7	18.7 Historical media products: accessibility and transparent correction	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

28.3.3.5 PSYOP and MISO Doctrine reusable subsection contract: topic rows, artifacts, and safety duties Navigation. Parent section: Section 28.

Lesson topic	Practice lens	Evidence artifact	Safety check
Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Military Information Support Operations (MISO): JP 3-13.2	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
FM 3-05 301: Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical audience analysis: protection and evidentiary limits	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
PSYOP in Full-Spectrum Operations: Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical media products: accessibility and transparent correction	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

28.3.3.6 PSYOP and MISO Doctrine annotated source ledger: real titles and local contribution Each source cited by this **Cognitive Security and Influence Resilience** module is paired below with its real title and a one-line note on what it contributes to **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

Source	Cited work	Curriculum annotation	Status
[ageint238]	Recommendation on the Ethics of Artificial Intelligence	The official UNESCO page for the Recommendation on the Ethics of Artificial Intelligence, the first global standard-setting instrument on AI ethics, adopted in 2021 and applicable to all 194 member states. It outlines four core values, including human rights protection and environmental flourishing, and ten guiding principles such as proportionality, privacy, transparency, and fairness.	verified source-guide; annotation metadata, not claim verification
[ageint239]	Digital Space and Human Rights	Official OHCHR digital rights portal.	original source-guide; annotation metadata, not claim verification

[ageint084]	JP 3-53 Doctrine for Joint Psychological Operations	Joint Publication 3-53, Doctrine for Joint Psychological Operations (Joint Chiefs of Staff, 10 July 1996). This US military doctrine document establishes the doctrinal basis for planning and conducting psychological operations in support of joint military operations.	verified source-guide; annotation metadata, not claim verification
[ageint085]	Military Information Support Operations	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint086]	Tactical Psychological Operations Manual / PDF / Computers	A U.S. military field manual, FM 3-05.302, providing doctrine for tactical psychological operations at the unit level. The roughly 255-page document covers the organization of these units, command relationships when supporting joint forces, a multi-phase product development and assessment process, and how intelligence supports such operations. It serves as a comprehensive training and reference document for personnel involved in tactical influence operations.	verified source-guide context; do not use as primary analytic support; annotation metadata, not claim verification
[ageint087]	FM 3-05.301 Psychological Operations Process Tactics, Techniques	…	original source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint302]	National Geospatial-Intelligence Agency About Us	The official "About Us" page of the National Geospatial-Intelligence Agency (NGA), a U.S. Department of Defense and intelligence community organization. It describes NGA's mission of delivering geospatial intelligence, or GEOINT, to support military operations, policymakers, and first responders, spanning imagery analysis, mapping, geodesy, and navigation safety.	verified source-guide; annotation metadata, not claim verification
[ageint297]	Intelligence Community Directive 203: Analytic Standards	Official ODNI Intelligence Community Directive 203 analytic standards source for objectivity, independence, timeliness, alternatives, confidence, sourcing, and accuracy in analytic products.	original source-guide; annotation metadata, not claim verification
[ageint308]	Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure	An archived CISA publication, "CISA Insights: Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure," providing guidance on the threat that foreign influence campaigns pose to U.S. critical infrastructure.	verified source-guide; annotation metadata, not claim verification
[ageint311]	Countering Information Threats	An official NATO topic page describing the Alliance's approach to countering information threats, defined as intentional, manipulative, and coordinated activities by state and non-state actors including disinformation and propaganda. It explains why such threats matter for democratic processes and institutional trust, and outlines a four-part framework of understanding, preventing, containing, and recovering.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 28; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

28.3.4 PSYOP and MISO Doctrine governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 28.

28.3.5 PSYOP and MISO Doctrine analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 18's governance-boundary section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Cognitive Security and Influence Resilience** for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations (MISO): JP 3-13.2**. [ageint238]; [ageint239].

Curriculum topic spine: Cognitive influence-analysis case review using sample materials, **Military Information Support Operations (MISO): JP 3-13.2**, **Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials**. **Recorded source cluster; inspection and scope limits apply:** [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]; [OECD, 2026c]; [Geneva Centre for Security Policy, 2025]; [United States Intelligence Community, 2020a].

Conceptual depth: protecting attention, belief formation, and decision quality without turning resilience education into manipulation.

Method stack: claim decomposition, narrative provenance, inoculation framing, bias checks, audience-risk review, and after-action learning.

Composability contract: separate descriptive analysis, normative assessment, response options, and protected-audience considerations.

Known failure modes: counter-messaging as manipulation, overclaiming intent, pathologizing audiences, and collapsing uncertainty into moral certainty.

Defensive boundary: practice uses benign simulations and resilience education; it does not create persuasion campaigns, impersonation, or deception plans. Applied to **Cognitive influence-analysis case review using sample materials; Military Information Support Operations (MISO): JP 3-13.2**.

Anchor	Why it matters here
[Cybersecurity and Infrastructure Security Agency, 2024b]	Official CISA guidance on foreign influence operations targeting critical infrastructure. Checked as of 2026-05-21; role: source_quality_anchor.
[North Atlantic Treaty Organization, 2026a]	Official NATO counter-information-threat guidance. Checked as of 2026-05-21; role: source_quality_anchor.
[Cybersecurity and Infrastructure Security Agency, 2026b]	Official CISA election-security source for public-resilience, foreign-influence awareness, rumor control, and defensive communication framing. Checked as of 2026-05-21; role: curriculum_anchor.
[North Atlantic Treaty Organization, 2026b]	Official NATO source for hybrid-threat resilience across cyber, information, economic, political, and military pressure. Checked as of 2026-05-21; role: curriculum_anchor.
[OECD, 2026c]	Official OECD policy source for information integrity, governance responses, public trust, and democratic resilience. Checked as of 2026-05-21; role: curriculum_anchor.
[Geneva Centre for Security Policy, 2025]	Policy-scholarship source for cognitive security, information literacy, critical thinking, and whole-of-society resilience. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Intelligence Community, 2020a]	Official IC framework for AI goals, authorities, human judgment, bias mitigation, testing, documentation, explainability, and review. Checked as of 2026-05-21; role: curriculum_anchor.

28.3.5.1 PSYOP and MISO Doctrine evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Cognitive Security and Influence Resilience** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint238]; [ageint239].

28.3.6 PSYOP and MISO Doctrine agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 28.

AGEINT translation is bounded by the **Cognitive Security and Influence Resilience** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.6.1 PSYOP and MISO Doctrine permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 28.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.6.2 PSYOP and MISO Doctrine excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint238]; [ageint239] and **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

28.3.7 PSYOP and MISO Doctrine governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 28.

Governance is practiced as a gate on the **Cognitive Security and Influence Resilience** lane. Learners use the **Cognitive-Resilience Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.7.1 PSYOP and MISO Doctrine governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint238]; [ageint239].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Cognitive Security and Influence Resilience** failure modes and the **Cognitive-Resilience Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

28.3.7.2 PSYOP and MISO Doctrine evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Cognitive-Resilience Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.7.3 PSYOP and MISO Doctrine current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. [ageint238]; [ageint239].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_cisa_foreign_influence` for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**?	Preparing for and Mitigating Foreign Influence Operations; lane `source_quality_spine`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; source-quality triangulation and claim-boundary review
What does the module inherit from `official_nato_counter_information_threats` for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**?	Countering Information Threats; lane `source_quality_spine`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; source-quality triangulation and claim-boundary review
What does the module inherit from `official_cisa_election_security_influence` for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**?	Election Security; lane `cognitive_influence_security`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; Official CISA election-security source for public-resilience, foreign-influence awareness, rumor control, and defensive communication framing.
What does the module inherit from `official_nato_hybrid_threats` for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**?	Countering Hybrid Threats; lane `cognitive_influence_security`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; Official NATO source for hybrid-threat resilience across cyber, information, economic, political, and military pressure.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 28; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

28.3.8 PSYOP and MISO Doctrine assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 28.

28.3.9 PSYOP and MISO Doctrine assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 28.

28.3.9.1 PSYOP and MISO Doctrine capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2** and [ageint238]; [ageint239].

28.3.9.2 PSYOP and MISO Doctrine instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2** and [ageint238]; [ageint239].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

28.3.9.3 PSYOP and MISO Doctrine assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Cognitive influence-analysis case review using sample materials; **Military Information Support Operations (MISO): JP 3-13.2**; **Tactical PSYOP TTP: Cognitive influence-analysis case review using sample materials** **FM 3-05 301: Cognitive influence-analysis case review using sample materials**; **Historical audience analysis: protection and evidentiary limits**; **PSYOP in Full-Spectrum Operations: Cognitive influence-analysis case review using sample materials** **Historical media products: accessibility and transparent correction**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: distinguish observation, attribution, impact assessment, and resilience response. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

28.3.10 PSYOP and MISO Doctrine refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint238]; [ageint239] and **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**.

28.3.10.1 PSYOP and MISO Doctrine refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. The local signals begin with [ageint238]; [ageint239].

28.3.10.2 PSYOP and MISO Doctrine claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**, and the source spine for these checks begins with [ageint238]; [ageint239].

28.3.11 PSYOP and MISO Doctrine reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint238]; [ageint239].

Contextual source routes. For module 18's review-checklist section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2**. [ageint238]; [ageint239].
- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.

- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

28.3.12 PSYOP and MISO Doctrine learning-path links: module map, overview, and curriculum atlas

These links keep **Cognitive influence-analysis case review using sample materials; Military Information Support Operations: JP 3-13.2** paired with the orientation atlas, the parent unit, and the previous and next modules, so a reader can trace which claims and caveats are inherited rather than re-derived here. Anchored at [ageint238]; [ageint239].
Section 2, Section 27, Section 29

29 Active Measures and Disinformation

29.0.1 Active Measures and Disinformation figures and course links: visual evidence, source flow, and navigation

The module uses Figure 67 and Figure 64 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 27, Section 28, Section 30.
This module teaches the **Cognitive Security and Influence Resilience** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint239].

29.1 Cognitive Security and Influence Resilience frame for Active Measures and Disinformation: source context, topic focus, and reader task

Navigation. Parent section: Section 29.

29.1.1 Active Measures and Disinformation orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 29.

29.1.2 Active Measures and Disinformation conceptual primer: source context, core model, and reader task

This chapter teaches cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The chapter uses **Cognitive-Resilience Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.
The central distinction is to separate analysis of influence from persuasion design. Core topics include **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation; Declassified source-protection and institutional-control case study**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint239].
Learners move from vocabulary and the **Cognitive-Resilience Lens** distinction through topic lessons on **Cognitive influence-analysis case review using sample materials** with evidence and misconception checks, then assemble a **narrative-risk map with provenance, uncertainty, audience harms, and response options** with safety and rights gates.

29.1.3 Active Measures and Disinformation learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 29.

- Connect **Cognitive influence-analysis case review using sample materials and Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** to **Cognitive Security and Influence Resilience** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate analysis of influence from persuasion design; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as counter-messaging as manipulation, overclaiming intent, pathologizing audiences, and collapsing uncertainty into moral certainty, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: practice uses benign simulations and resilience education; it does not create persuasion campaigns, impersonation, or deception plans.

29.1.4 Active Measures and Disinformation core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 29.

Term	Working definition
Narrative provenance	where a claim, frame, or story came from and how it spread
Prebunking	transparent education about misleading patterns before exposure; its effectiveness and transfer require evidence rather than assumption
Audience harm	a privacy, dignity, autonomy, or trust risk for people receiving information
Attribution caution	the rule that intent and origin claims need strong evidence
Resilience response	a transparent education, correction, or process improvement that avoids manipulation
MISO boundary	the separation between this classroom analysis and authorized military influence activities; MISO is not defined simply as covert messaging
Inoculation	an approach intended to build recognition of misleading tactics; it does not imply immunity or proven efficacy for a particular audience

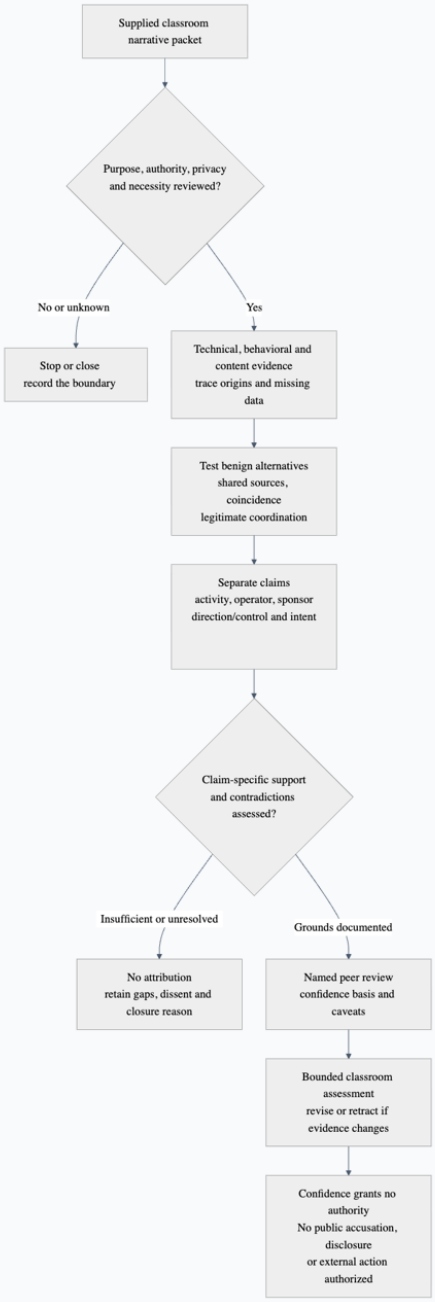

Figure 67: This classroom workflow separates evidence of coordination from malicious intent, actor identity, sponsorship, and direction or control. Each proposition needs its own support, alternatives, uncertainty, and named review; copied reports are not independent confirmation. An unresolved finding can close without attribution. Analytic confidence is not permission for public accusation, disclosure, additional collection, or external response, which this exercise does not authorize.

29.2 Cognitive-Resilience Lens path for Active Measures and Disinformation: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 29.

29.2.1 Active Measures and Disinformation practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 29.

29.2.2 Active Measures and Disinformation topic lessons: source-backed concepts and transfer tasks

Active Measures and Disinformation builds cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The sequence opens with **Cognitive influence-analysis case review using sample materials**, **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, **Declassified source-protection and institutional-control case study** and applies the **Cognitive-Resilience Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 64; module overview Section 29; curriculum atlas Section 2.

Contextual source routes. For module 19's topic-lessons section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

29.2.2.1 Lesson 1: Cognitive influence-analysis case review using sample materials Concept. Cognitive influence-analysis case review using sample materials focuses on transparent resilience education: provenance, audience harm, attribution caution, and non-manipulative response options.

Worked reasoning and limits. These U.S. historical assessments describe Soviet active measures from an institutional vantage point; distinguish their documented examples from their interpretations of intent and impact. A report about an adversary is not that adversary's own doctrine, and archive hosting does not make every assertion independently corroborated [ageint088, ageint089].

Why it matters. Analysts use **Cognitive influence-analysis case review** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Cognitive influence-analysis case review using sample materials**: [ageint088] and [ageint089]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Cognitive influence-analysis case review**, inspect the original passages. Curriculum annotation for [ageint088]: A U.S. Department of State Bureau of Public Affairs report from October 1981, released under FOIA. It catalogs Soviet 'active measures' — the Soviet term for covert influence operations — including written disinformation, control of foreign media, use of front organizations, clandestine broadcasting, blackmail, and political influence operations. Specific cases include Soviet forgeries related to the 1979 Grand Mosque seizure and NATO theater nuclear force debates. Curriculum annotation for [ageint089]: An article by Dennis Kux published in Parameters: Journal of the US Army War College (1985) and preserved in the CIA CREST archive. It defines and distinguishes Soviet 'disinformation' and 'active measures,' situating them within a spectrum of white, gray, and black foreign influence operations. Kux examines KGB front groups, agents of influence, forgeries, and the broader strategic goal of tarnishing Western governments while advancing Soviet foreign policy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Cognitive influence-analysis case review**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Cognitive influence-analysis case review using**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Cognitive influence-analysis case review** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Cognitive influence-analysis case review**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Apply this module's safe boundary for **Cognitive influence-analysis case review** to another artifact while keeping information-integrity analysis and resilience education and reviewer ownership explicit.

29.2.2.2 Lesson 2: Dezinformatsiya: Forgery, Front Organizations, Media Manipulation Concept. Dezinformatsiya: Forgery, Front Organizations, Media Manipulation is taught in the **Cognitive Security and Influence Resilience** lane. The analytic distinction is to separate analysis of influence from persuasion design. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. Forgery concerns authenticity; a false claim concerns content; intentional disinformation additionally requires evidence of knowing deception. The circulated State Department report in ageint090 is not independent corroboration of the same report elsewhere, while the 1986 speech in ageint091 is another source genre, not proof of every named campaign [ageint090, ageint091].

Why it matters. Dezinformatsiya: Forgery, Front Organizations, Media Manipulation matters in the **Cognitive Security and Influence Resilience** lane because information-integrity analysis and resilience education evidence must stay separate from judgment; counter-messaging as manipulation is a common failure.

Source support. Inherited source-guide context for **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**: [ageint090] and [ageint091]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, inspect the original passages. Curriculum annotation for [ageint090]: A CIA CREST record (October 1981, released March 2007) comprising a routing and record sheet from the PCS/PGLO office dated February 8, 1982, attached to the same Department of State Special Report No. 88 on Soviet active measures. The document is catalogued as an open-source CREST entry and captures the internal CIA circulation of the State Department's public report on Soviet forgery and disinformation operations. Curriculum annotation for [ageint091]: A declassified-in-part 1986 CIA speech text on Soviet active measures, prepared by the Foreign Activities Branch, Third World Activities Division, Office of Soviet Analysis. It explains the KGB's use of forgeries, disinformation, and front organizations to covertly influence foreign governments and publics, illustrating with the forged 1984 Olympic KKK leaflet operation designed to discourage participation in the Los Angeles Games. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Dezinformatsiya**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Dezinformatsiya**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception that Dezinformatsiya: Forgery, Front Organizations, Media Manipulation can be used while ignoring the rule to separate analysis of influence from persuasion design.

Transfer task. Transfer **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

29.2.2.3 Lesson 3: Declassified source-protection and institutional-control case study

Concept. Declassified source-protection and institutional-control case study studies the declassified record for institutional lessons about source protection, oversight, and the danger of translating historical methods into current practice.

Worked reasoning and limits. Keep organizational claims bounded by the report's date, author and evidence: a historical office or function does not establish a current roster or continuity of behavior. Distinguish formal responsibility, attributed conduct and demonstrated direction/control; do not identify present people or institutions from narrative similarity.

Why it matters. Analysts use **Declassified source-protection** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that counter-messaging as manipulation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Declassified source-protection and institutional-control case study**: [ageint089]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Declassified source-protection**, inspect the original passages. Curriculum annotation for [ageint089]: An article by Dennis Kux published in Parameters: Journal of the US Army War College (1985) and preserved in the CIA CREST archive. It defines and distinguishes Soviet 'disinformation' and 'active measures,' situating them within a spectrum of white, gray, and black foreign influence operations. Kux examines KGB front groups, agents of influence, forgeries, and the broader strategic goal of tarnishing Western governments while advancing Soviet foreign policy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Declassified source-protection**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must cite the declassified source descriptor, the bounded lesson about **Declassified source-protection and institutional-control case**, the redaction caveat, the attribution uncertainty, the protected-detail boundary, and the reviewer who clears release. Shape **Declassified source-protection** work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that a source identity is safe to discuss once the operation is historical, when protection obligations and re-identification risk outlast the case itself.

Transfer task. Transfer **Declassified source-protection** from this module to a second motif by preserving information-integrity analysis and resilience education, replacing action with audit, and naming the blocked use.

29.2.2.4 Lesson 4: Historical campaign labels: attribution, warning and unresolved aliases

Concept. Historical campaign labels: attribution, warning and unresolved aliases uses attribution indicators cautiously by separating technical similarity, context, confidence, and geopolitical inference.

Worked reasoning and limits. The inherited list incorrectly groups warning intelligence with influence campaigns: the National Security Archive's inspected documentary briefing describes RYAN as an effort to detect a Western first strike, so consider it separately as a warning/confirmation-bias comparison, not an active-measures campaign (https://nsarchive.gwu.edu/briefing-book/aa83/2018-11-05/soviet-side-1983-war-scare). The cited speech does not establish the listed operations, nor does this source spine resolve whether INFEKTION and DENVER denote aliases or related components; hold those identities rather than count three independent cases. Any substantive history requires operation-specific archival support; the raw heading is retained as source identity, not endorsed as fact.

Why it matters. Historical campaign labels connects classroom vocabulary to Cognitive Security and Influence Resilience practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Historical campaign labels: attribution, warning and unresolved aliases**: [ageint091]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Historical campaign labels**, inspect the original passages. Curriculum annotation for [ageint091]: A declassified-in-part 1986 CIA speech text on Soviet active measures, prepared by the Foreign Activities Branch, Third World Activities Division, Office of Soviet Analysis. It explains the KGB's use of forgeries, disinformation, and front organizations to covertly influence foreign governments and publics, illustrating with the forged 1984 Olympic KKK leaflet operation designed to discourage participation in the Los Angeles Games. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Historical campaign labels**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Historical campaign labels**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Historical campaign labels** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Historical campaign labels: attribution, warning and unresolved aliases establishes intent without reviewing alternative explanations.

Transfer task. Transfer **Historical campaign labels** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

29.2.2.5 Lesson 5: Russian Active Measures in the: Cognitive influence-analysis case review using sample materials

Concept. Russian Active Measures in the: Cognitive influence-analysis case review using sample materials analyzes influence campaigns through provenance, audience harm, attribution caution, and transparent response options.

Worked reasoning and limits. A literature review can support an attributed account within its period but cannot establish the sponsor of a newly encountered message. Distinguish observed dissemination, inferred coordination, inferred intent and audience effect; a capability or objective is not a measured outcome [ageint092].

Why it matters. Analysts use **Russian Active Measures in the** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as

permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Russian Active Measures in the: Cognitive influence-analysis case review using sample materials**: [ageint092]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Russian Active Measures in the**, inspect the original passages. Curriculum annotation for [ageint092]: A March 2019 CREST (Centre for Research and Evidence on Security Threats) report titled "Russia and Disinformation: Maskirovka," prepared by scholars of Russian foreign and security policy using open-source and Russian-language primary material. It examines the historical background of Soviet and Russian disinformation, including the concept of active measures, and how disinformation is woven into strategic narratives and diplomacy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Russian Active Measures in the**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Russian Active Measures**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Russian Active Measures in the** work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Russian Active Measures in the**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **Russian Active Measures in the** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

29.2.2.6 Lesson 6: Chinese Information Operations: United Front Work Department

Concept. Chinese Information Operations: United Front Work Department is taught in the **Cognitive Security and Influence Resilience** lane. The analytic distinction is to separate analysis of influence from persuasion design. Apply it to the supplied evidence; a topic label alone establishes neither a mechanism nor a conclusion.

Worked reasoning and limits. This named institutional topic remains a source gap: broad defensive guidance does not document the department's history, structure or responsibility for a particular activity. Do not collapse Chinese nationality, diaspora association, lawful advocacy and state direction into one category; a sponsor claim needs evidence of the actual relationship, not shared language or viewpoint.

Why it matters. Chinese Information Operations connects classroom vocabulary to Cognitive Security and Influence Resilience practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Chinese Information Operations: United Front Work Department**: [ageint308] and [ageint311]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Chinese Information Operations**, inspect the original passages. Curriculum annotation for [ageint308]: An archived CISA publication, "CISA Insights: Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure," providing guidance on the threat that foreign influence campaigns pose to U.S. critical infrastructure. Curriculum annotation for [ageint311]: An official NATO topic page describing the Alliance's approach to countering information threats, defined as intentional, manipulative, and coordinated activities by state and non-state actors including disinformation and propaganda. It explains why such threats matter for democratic processes and institutional trust, and outlines a four-part framework of understanding, preventing, containing, and recovering. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Chinese Information Operations**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Chinese Information Operations**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Chinese Information Operations** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception that Chinese Information Operations: United Front Work Department can be used while ignoring the rule to separate analysis of influence from persuasion design.

Transfer task. Transfer **Chinese Information Operations** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

29.2.2.7 Lesson 7: Deception, Disinformation, and Strategic Communications: NDU case study

Concept. Deception, Disinformation, and Strategic Communications: NDU case study analyzes influence campaigns through provenance, audience harm, attribution caution, and transparent response options.

Worked reasoning and limits. The two links identify one NDU study by Fletcher Schoen and Christopher J. Lamb, not independent NDU and Brown findings. Its interpretation of the Active Measures Working Group is a retrospective case argument; distinguish the group's documented actions from causal claims about strategic effects and from general claims that exposure always works [ageint093, ageint094].

Why it matters. Analysts use **Deception, Disinformation, and Strategic Communications** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that counter-messaging as manipulation would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Deception, Disinformation, and Strategic Communications: NDU case study**: [ageint093] and [ageint094]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Deception, Disinformation, and Strategic Communications**, inspect the original passages. Curriculum annotation for [ageint093]: Fletcher Schoen and Christopher J. Lamb, 'Deception, Disinformation, and Strategic Communications: How One Interagency Group Made a Major Difference,' INSS Strategic Perspectives No. 11 (NDU Press, June 2012). The study examines the U.S. Active Measures Working Group, a small interagency committee formed in the 1980s to expose and counter Soviet disinformation, and analyzes why it succeeded where most such groups fail. Curriculum annotation for [ageint094]: Fletcher Schoen and Christopher J. Lamb, 'Deception, Disinformation, and Strategic Communications: How One Interagency Group Made a Major Difference,' INSS Strategic Perspectives No. 11 (NDU Press, June 2012). These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Deception, Disinformation, and Strategic Communications**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Deception Disinformation and Strategic Communications**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Deception, Disinformation, and Strategic Communications** work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Deception, Disinformation, and Strategic Communications: NDU case study is optional whenever separate analysis of influence from persuasion design feels inconvenient.

Transfer task. Transfer **Deception, Disinformation, and Strategic Communications** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

29.2.2.8 Lesson 8: AI-Driven Active Measures: Cognitive influence-analysis case review using sample materials

Concept. AI-Driven Active Measures: Cognitive influence-analysis case review using sample materials analyzes influence campaigns through provenance, audience harm, attribution caution, and transparent response options.

Worked reasoning and limits. Scale here means potential production or distribution volume, not geospatial resolution. Policy and position papers motivate research but do not show that more synthetic content produces greater persuasion, durable belief change or strategic success. Separate production capability, actual exposure, audience uptake and demonstrated effect; no detector score establishes an author or sponsor [ageint095, ageint096].

Why it matters. AI-Driven Active Measures matters in the **Cognitive Security and Influence Resilience** lane because information-integrity analysis and resilience education evidence must stay separate from judgment; treating resilience labels as permission to skip provenance review is a common failure.

Source support. Inherited source-guide context for **AI-Driven Active Measures: Cognitive influence-analysis case review using sample materials**: [ageint095] and [ageint096]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **AI-Driven Active Measures**, inspect the original passages. Curriculum annotation for [ageint096]: A position paper (Stanford authors, ICLR 2026 workshop) arguing that AI research and development should prioritize cognitive security, defined as protecting human cognitive processes from hazardous influence. It notes that generative AI systems increasingly designed to influence beliefs and behavior raise acute governance concerns, while research on these effects remains fragmented. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI-Driven Active Measures**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **AI-Driven Active Measures**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **AI-Driven Active Measures** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **AI-Driven Active Measures**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **AI-Driven Active Measures** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

29.2.2.9 Lesson 9: Countermeasures: Disinformation Detection and Response

Concept. Countermeasures: Disinformation Detection and Response analyzes influence campaigns through provenance, audience harm, attribution caution, and transparent response options.

Worked reasoning and limits. Completed offline case: R1 is a synthetic rumor that a reading room has closed; R2 and R3 reproduce R1 verbatim; R4 is a dated service log showing one room closed for repairs; R5 records simultaneous repost times but no account-control evidence. The provenance result is one rumor origin, one independent service record and an ambiguous timing feature: complete closure is contradicted by R4, while coordination, intent and sponsor remain unknown. A withheld R6 shows R1 omitted the word 'upstairs'; revise the claim to a scope error, retain possible copying or scheduling as alternatives, and stop attribution rather than investigate accounts. Publish only a transparent factual correction in the exercise; confidence in a content finding never grants permission for public accusation or countermeasures (see Section 3.6).

Why it matters. Without explicit treatment of **Countermeasures: Disinformation Detection and Response**, counter-messaging as manipulation undermines information-integrity analysis and resilience education review; the lesson builds the habit to separate analysis of influence from persuasion design.

Source support. Inherited source-guide context for **Countermeasures: Disinformation Detection and Response**: [ageint092]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Countermeasures: Disinformation Detection and Response**, inspect the original passages. Curriculum annotation for [ageint092]: A March 2019 CREST (Centre for Research and Evidence on Security Threats) report titled "Russia and Disinformation: Maskirovka," prepared by scholars of Russian foreign and security policy using open-source and Russian-language primary material. It examines the historical background of Soviet and Russian disinformation, including the concept of active measures, and how disinformation is woven into strategic narratives and diplomacy. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Countermeasures**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must name the source descriptor, the bounded claim about **Countermeasures**, the caveat that limits it, the uncertainty note, the out-of-scope-use boundary, and the reviewer accountable for challenge. Shape **Countermeasures: Disinformation Detection and Response** work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception that Countermeasures: Disinformation Detection and Response replaces human review whenever evidence looks plausible.

Transfer task. Transfer **Countermeasures: Disinformation Detection and Response** to a second module by preserving information-integrity analysis and resilience education, changing the source evidence, and naming a new reviewer.

29.2.3 Active Measures and Disinformation worked safe example: synthetic inputs, evidence, and review

Worked example: a sample public-library class evaluates a synthetic rumor about a community service and compares transparent correction options. [ageint238]; [ageint239].

Contextual source routes. For module 19's worked-example section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Unit discipline spine. Discipline: **information-integrity and influence analysis**. Learners use a **narrative-risk and resilience map** and keep this boundary visible: No covert persuasion, microtargeting, manipulation, or campaign design.

Frame. The classroom question centers on **Cognitive influence-analysis case review using sample materials**. Excluded actions stay explicit, and the **Cognitive-Resilience Lens** planning question is: How does the module protect autonomy, attention, trust, and decision quality without

designing persuasion?

Inputs. For the **Cognitive influence-analysis case review using sample materials** scenario, use six fictional museum-fee posts, five copying one original, a dated notice limiting a fee to a special exhibition, and a classroom media-literacy rubric. The Cognitive-Resilience Lens intake note records provenance, sensitivity, fit-to-purpose, and why the fixture is enough for this bounded exercise.

Analysis. For **Cognitive influence-analysis case review using sample materials**, students first extract the claim and distinguish general admission from the exhibition; then trace the copying tree and compare scope and dates with the notice; remove the five copies as a negative control, requiring the evidentiary judgment to remain unchanged. Consider ordinary scope confusion alongside intentional deception; stop attribution or audience profiling and hand a transparent, source-linked correction to the instructor for release review. Pause whenever an inference about Cognitive influence-analysis case review using sample materials appears without evidence, confidence outruns support, or an agent output is treated as judgment.

Completed synthetic result. a narrative-risk map marking the general-admission claim unsupported by the packet, a correction quoting the exhibition-only scope, and unresolved intent, sponsorship, reach, and real audience effects; this fixture supports a correction decision, not a measured resilience benefit Retain it as the **narrative-risk and resilience map** for this classroom fixture, with the stated source IDs, uncertainty, review disposition, and excluded-action boundary.

Flawed answer to revise. Treating **Cognitive influence-analysis case review using sample materials** as "Cognitive-Resilience Lens confirms it" is not enough. The revision ties the claim to information-integrity analysis and resilience education, adds the missing caveat, states confidence, and records the reviewer who accepted the bounded judgment.

Debrief. The reuse note for **Cognitive influence-analysis case review using sample materials** records the defensible claim, the assumption most likely to fail, the evidence that would change confidence, and the review condition for stopping reuse.

29.2.4 Active Measures and Disinformation practice sequence: studio moves, artifact steps, and limits

The studio sequence uses the **Cognitive-Resilience Lens** practice lens. Moves 1-3 form the compressed path; the full seminar path adds challenge, handoff, and a review memo for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

Contextual source routes. For module 19's practice-sequence section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Move	Learner action	Output	Check
1. Distinguish	Compare Cognitive influence-analysis case review using sample materials, Dezinformatsiya: Forgery, Front Organizations, Media Manipulation, Declassified source-protection and institutional-control case study; name what each topic can and cannot prove.	Glossary-and-contrast card.	Terms match the **Cognitive Security and Influence Resilience** lane.
2. Frame	Answer the lens question: How does the module protect autonomy, attention, trust, and decision quality without designing persuasion?	Scope card.	Authority, excluded actions, data boundary, and reviewer are explicit.
3. Evidence	Fill the artifact fields for Cognitive influence-analysis case review using sample materials: narrative-risk map with provenance, uncertainty, audience harms, and response options.	Evidence packet.	Sources, caveats, confidence, and uncertainty stay separable.
3a. Unit artifact	Add the narrative-risk and resilience map fields for Cognitive influence-analysis case review using sample materials.	Unit profile note.	Evidence artifacts include narrative provenance chain, audience-harm note.
4. Challenge	Test the misconception that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.	Failure-mode note.	The artifact applies the key distinction: separate analysis of influence from persuasion design.
5. Handoff	Prepare the artifact for another reviewer.	Handoff memo.	Inputs, transformations, reviewer, refresh trigger, and residual risk are visible.

29.2.4.1 Active Measures and Disinformation instructor notes: source reasoning, review points, and studio focus

Ask learners to verbalize the difference between a source, an inference, and a decision. Require a revision whenever a claim cannot be traced to a source descriptor or a human review point. Keep the focus on **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. [ageint238]; [ageint239].

29.2.4.2 Active Measures and Disinformation extension exercise: peer validation and refresh trigger review

Navigation. Parent section: Section 29.

Have learners swap artifacts and apply the **Cognitive-Resilience Lens** validation rule to someone else's work. The receiving learner must identify one strength, one missing caveat, and one refresh trigger for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.2.5 Active Measures and Disinformation knowledge check: misconceptions, evidence, and reviewer prompts

Navigation. Parent section: Section 29.

1. For every topic in this module, identify a source-supported distinction, an unsupported inference to reject, and the exact evidence needed to decide. Start with **Cognitive influence-analysis case review using sample materials**.
2. Transfer the **Cognitive-Resilience Lens** artifact from **Cognitive influence-analysis case review using sample materials** to the final topic, **Countermeasures: Disinformation Detection and Response**; explain what changes and what cannot transfer.
3. Identify one failure mode from the **Cognitive Security and Influence Resilience** lane and the evidence that would reveal it.
4. Answer the coursebook review question: Which correction informs readers without audience manipulation, unverified attribution, or assuming authority for military influence activities?
5. Correct this misconception: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

29.2.5.1 Active Measures and Disinformation answer quality rubric: source evidence, uncertainty, and safe transfer Judge answers with the canonical mastery evidence standard in the shared method-and-assurance reference (Section 3): a strong answer uses source evidence, distinguishes observation from judgment, names uncertainty, and states the safe boundary, while a revise-level answer gives a memorized definition of **Cognitive influence-analysis case review using sample materials** without source evidence, uncertainty, or a safe transfer task.

29.3 Active Measures and Disinformation assurance handoff: evidence, governance, refresh, and capstone

Navigation. Parent section: Section 29.

29.3.1 Active Measures and Disinformation evidence contract: source spine, verified anchors, transfer architecture, and claim limits

Navigation. Parent section: Section 29.

29.3.2 Active Measures and Disinformation transfer architecture: module inputs, outputs, and review boundary

Navigation. Parent section: Section 29.

29.3.2.1 Active Measures and Disinformation lineage and source tradition: profile, concepts, and first anchors This sits in the **Cognitive Security and Influence Resilience** lineage: protecting attention, belief formation, and decision quality without turning resilience education into manipulation. [ageint238]; [ageint239].

29.3.2.2 Active Measures and Disinformation working model: inputs, constraints, transforms, outputs, and oversight **Navigation.** Parent section: Section 29.

The work is modeled as inputs, constraints, transforms, outputs, feedback, and oversight for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, with provenance and reviewability throughout.

29.3.2.3 Active Measures and Disinformation knowledge architecture: inputs, transforms, outputs, and failure checks

- **Inputs:** benign fictional messages, factual source cards, provenance, consent conditions, and false-alarm controls. [ageint238]; [ageint239].
- **Transforms:** separate truth, technique cues, intent and effects; compare ordinary error; transparently review corrections; and preserve learner agency.
- **Outputs:** bounded claim and provenance assessment, recognition and false-alarm record, educational correction, or unresolved attribution.
- **Failure modes:** technique recognition as truth, affect as hostile intent, detector authority, covert persuasion, or assumed durable immunity.

29.3.2.4 Active Measures and Disinformation transfer contracts: authority, evidence, tools, and auditable output **Navigation.** Parent section: Section 29.

- **Authority contract:** define why the work is being practiced, who reviews it, and which actions are excluded for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.
- **Evidence contract:** keep the **Cognitive Security and Influence Resilience** source descriptors, transformations, claims, uncertainty, and confidence separable.
- **Tool contract:** bind any agent assistance to explicit tools, permissions, budgets, logging, and rollback conditions.
- **Output contract:** render the chapter artifact as bounded claim and provenance assessment, recognition and false-alarm record, educational correction, or unresolved attribution that another reviewer can audit.

29.3.2.5 Active Measures and Disinformation profile emphasis and local focus: method stack and topic cluster **Navigation.** Parent section: Section 29.

The matched profile emphasizes protecting attention, belief formation, and decision quality without turning resilience education into manipulation. The method stack is claim decomposition, narrative provenance, inoculation framing, bias checks, audience-risk review, and after-action learning; the local topic cluster is **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.3 Active Measures and Disinformation evidence spine: source roles, citation support, and claim limits

Navigation. Parent section: Section 29.

Guide citations preserve the inherited bibliography, verified anchors supply lane constraints, and the **Cognitive Security and Influence Resilience** profile tells reviewers what evidence is strong enough for the module artifact built around **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.3.1 Active Measures and Disinformation guide source spine: inherited keys and local citation roles Primary guide citations: [ageint238]; [ageint239]; [ageint240]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint088]; [ageint089]; [ageint090]; [ageint091]; [ageint092]; [ageint093]; [ageint094]; [ageint095]; [ageint096]; [ageint308]; [ageint311].

29.3.3.2 Active Measures and Disinformation verified source canon: direct anchors and claim boundaries The source canon has three tiers; the local spine begins with [ageint238]; [ageint239].

Tier	What counts	How it is used
Source guide	[ageint238]; [ageint239]; [ageint240]; [ageint278]; [ageint279]; [ageint283]; [ageint290]; [ageint291]; [ageint294]; [ageint088]; [ageint089]; [ageint090]; [ageint091]; [ageint092]; [ageint093]; [ageint094]; [ageint095]; [ageint096]; [ageint308]; [ageint311].	Preserves the inherited AGEINT outline and `ageintNNN` keys.
Verified anchors	Official, standards, public-domain, or scholarly sources in `references-*.bib`	Supplies governance, quality, legal, safety, and technical constraints.
Runtime profile	The profile matched to the current unit and current module	Selects the practice lens, method stack, failure modes, and defensive boundary for generated prose.

Contextual source routes. For module 19's source-canon section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Maintenance rule: Perplexity may suggest candidates for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** and [ageint238]; [ageint239], but only directly verified source URLs are encoded as citations.

29.3.3.3 Active Measures and Disinformation intelligence practice lens: evidence artifact and safety check Practice lens: **Cognitive-Resilience Lens** for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. [ageint238]; [ageint239].

Planning question: How does the module protect autonomy, attention, trust, and decision quality without designing persuasion?

Evidence artifact: narrative-risk map with provenance, uncertainty, audience harms, and response options.

Validation rule: distinguish observation, attribution, impact assessment, and resilience response. Applied to **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

Handoff contract: handoff supports transparency, education, and resilience, not microtargeted influence or deception.

Safety check: exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning.

29.3.3.4 Active Measures and Disinformation runtime-to-reader map: generated sections and verifier surfaces Navigation. Parent section: Section 29.

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Source-lane evidence, public registers, and claim-ledger studio	19.99	19.99 source title transformed into safe curriculum treatment; original: V2 source-lane extension: bind Active Measures and Disinformation to source-lane evidence, claim-ledger review, safe substitution, compliance/rights mapping, instructor deliverables, and explicit refresh triggers	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Bounded autonomy, procurement, incident-response, and assurance studio	19.101	19.101 source title transformed into safe curriculum treatment; original: Deep expansion: add accessibility/UDL review, procurement/vendor oversight, HRIA/DPIA worksheet, data-lineage registry, assessment-integrity protocol, agent incident drill, role-based competency map, and adversarial assurance cycle for Active Measures and Disinformation	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Model-card, recoverability, retention, and learner-support evidence package	19.102	19.102 source title transformed into safe curriculum treatment; original: Evidence-package expansion: add model/dataset documentation cards, transparency notice, records-retention audit trail, release/change-control gate, risk-exception memo, learner support plan, instructor question bank, and remediation backlog for Active Measures and Disinformation	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	19.1	19.1 source title transformed into safe curriculum treatment; original: Soviet Active Measures: Definitions and Doctrine	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

Rendered title	Source loci	Source provenance	Practice lens	Evidence artifact	Safety check
Dezinformatsiya: Forgery, Front Organizations, Media Manipulation	19.2	19.2 Dezinformatsiya: Forgery, Front Organizations, Media Manipulation	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Declassified source-protection and institutional-control case study	19.3	19.3 source title transformed into safe curriculum treatment; original: KGB Aktivnyye Meropriyatiya: Historical Organization	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical campaign labels: attribution, warning and unresolved aliases	19.4	19.4 Historical campaign labels: attribution, warning and unresolved aliases	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	19.5	19.5 source title transformed into safe curriculum treatment; original: Russian Active Measures in the Contemporary Era	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Chinese Information Operations: United Front Work Department	19.6	19.6 Chinese Information Operations: United Front Work Department	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Deception, Disinformation, and Strategic Communications: NDU case study	19.7	19.7 Deception, Disinformation, and Strategic Communications: NDU case study	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Cognitive influence-analysis case review using sample materials	19.8	19.8 source title transformed into safe curriculum treatment; original: AI-Driven Active Measures: Synthetic Influence at Scale	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Countermeasures: Disinformation Detection and Response	19.9	19.9 Countermeasures: Disinformation Detection and Response	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

29.3.3.5 Active Measures and Disinformation reusable subsection contract: topic rows, artifacts, and safety duties **Navigation.** Parent section: Section 29.

Lesson topic	Practice lens	Evidence artifact	Safety check
Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Dezinformatsiya: Forgery, Front Organizations, Media Manipulation	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Declassified source-protection and institutional-control case study	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Historical campaign labels: attribution, warning and unresolved aliases	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Russian Active Measures in the: Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

Lesson topic	Practice lens	Evidence artifact	Safety check
Chinese Information Operations: United Front Work Department	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Deception, Disinformation, and Strategic Communications: NDU case study	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
AI-Driven Active Measures: Cognitive influence-analysis case review using sample materials	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning
Countermeasures: Disinformation Detection and Response	Cognitive-Resilience Lens	narrative-risk map with provenance, uncertainty, audience harms, and response options	exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning

29.3.3.6 Active Measures and Disinformation annotated source ledger: real titles and local contribution Each source cited by this **Cognitive Security and Influence Resilience** module is paired below with its real title and a one-line note on what it contributes to **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

Source	Cited work	Curriculum annotation	Status
[ageint238]	Recommendation on the Ethics of Artificial Intelligence	The official UNESCO page for the Recommendation on the Ethics of Artificial Intelligence, the first global standard-setting instrument on AI ethics, adopted in 2021 and applicable to all 194 member states. It outlines four core values, including human rights protection and environmental flourishing, and ten guiding principles such as proportionality, privacy, transparency, and fairness.	verified source-guide; annotation metadata, not claim verification
[ageint239]	Digital Space and Human Rights	Official OHCHR digital rights portal.	original source-guide; annotation metadata, not claim verification
[ageint240]	The Right to Privacy in the Digital Age	The Office of the High Commissioner for Human Rights (OHCHR) hub page on the right to privacy in the digital age. It addresses how data-intensive technologies, particularly artificial intelligence, create risks for privacy, autonomy, and human dignity, and curates international standards, reports, and expert consultations.	verified source-guide; annotation metadata, not claim verification
[ageint278]	Recommendation of the Council on Public Procurement	The OECD Recommendation of the Council on Public Procurement (OECD/LEGAL/0411), a legal instrument adopted by the OECD Council in 2015 on the proposal of the Public Governance Committee. It frames public procurement as a pillar of strategic governance and service delivery and sets out principles for governments to follow.	verified source-guide; annotation metadata, not claim verification
[ageint279]	Open Contracting Data Standard	The documentation homepage for the Open Contracting Data Standard, version 1.1.5, maintained by the Open Contracting Partnership to support disclosure of government contracting data across the procurement lifecycle. It provides a common data model spanning planning, tender, award, contract, and implementation stages, along with a primer, implementation guidance, technical schemas, and validation tooling.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint283]	Recommendation of the Council on Open Government	An OECD legal instrument document reproducing the Recommendation of the Council on Open Government (OECD/LEGAL/0438), adopted on 14 December 2017. It defines open government as a culture of governance promoting transparency, integrity, accountability, and stakeholder participation in support of democracy and inclusive growth.	verified source-guide; annotation metadata, not claim verification
[ageint290]	NIST SP 800-218A: Secure Software Development Practices for Generative AI and Dual-Use Foundation Models	NIST Special Publication 800-218A (July 2024), which augments the Secure Software Development Framework with practices specific to AI model development across the software lifecycle. Produced in response to Executive Order 14110, it addresses AI model producers, developers building on those models, and acquirers of AI systems, and is designed to be used alongside NIST SP 800-218.	verified source-guide; annotation metadata, not claim verification
[ageint291]	Revised 508 Standards and 255 Guidelines	Official documentation from the U.S. Access Board on the Revised 508 Standards and 255 Guidelines for information and communication technology accessibility. It establishes mandatory accessibility requirements for federal agencies and voluntary guidelines for telecommunications manufacturers, covering hardware, software, websites, electronic documents, and support services.	verified source-guide; annotation metadata, not claim verification
[ageint294]	M-25-21: Accelerating Federal Use of AI through Innovation, Governance, and Public Trust	An April 2025 Office of Management and Budget memorandum (M-25-21) directing executive branch agencies on federal use of artificial intelligence. Issued under Executive Order 14179, it instructs agencies to accelerate adoption of AI to improve public services and government efficiency while maintaining safeguards for civil rights, civil liberties, and privacy.	verified source-guide; annotation metadata, not claim verification
[ageint088]	SOVIET 'ACTIVE MEASURES' FORGERY, DISINFORMATION, POLITICAL OPERATIONS	A U.S. Department of State Bureau of Public Affairs report from October 1981, released under FOIA. It catalogs Soviet 'active measures' — the Soviet term for covert influence operations — including written disinformation, control of foreign media, use of front organizations, clandestine broadcasting, blackmail, and political influence operations. Specific cases include Soviet forgeries related to the 1979 Grand Mosque seizure and NATO theater nuclear force debates.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint089]	SOVIET ACTIVE MEASURES AND DISINFORMATION: OVERVIEW AND ASSESSMENT	An article by Dennis Kux published in Parameters: Journal of the US Army War College (1985) and preserved in the CIA CREST archive. It defines and distinguishes Soviet 'disinformation' and 'active measures,' situating them within a spectrum of white, gray, and black foreign influence operations. Kux examines KGB front groups, agents of influence, forgeries, and the broader strategic goal of tarnishing Western governments while advancing Soviet foreign policy.	verified source-guide; annotation metadata, not claim verification
[ageint090]	"SOVIET ACTIVE MEASURES: FORGERY, DISINFORMATION, POLITICAL OPERATIONS"	A CIA CREST record (October 1981, released March 2007) comprising a routing and record sheet from the PCS/PGLO office dated February 8, 1982, attached to the same Department of State Special Report No. 88 on Soviet active measures. The document is catalogued as an open-source CREST entry and captures the internal CIA circulation of the State Department's public report on Soviet forgery and disinformation operations.	verified source-guide; annotation metadata, not claim verification
[ageint091]	SOVIET ACTIVE MEASURES AND DISINFORMATION	A declassified-in-part 1986 CIA speech text on Soviet active measures, prepared by the Foreign Activities Branch, Third World Activities Division, Office of Soviet Analysis. It explains the KGB's use of forgeries, disinformation, and front organizations to covertly influence foreign governments and publics, illustrating with the forged 1984 Olympic KKK leaflet operation designed to discourage participation in the Los Angeles Games.	verified source-guide; annotation metadata, not claim verification
[ageint092]	INTRODUCTION	A March 2019 CREST (Centre for Research and Evidence on Security Threats) report titled "Russia and Disinformation: Maskirovka," prepared by scholars of Russian foreign and security policy using open-source and Russian-language primary material. It examines the historical background of Soviet and Russian disinformation, including the concept of active measures, and how disinformation is woven into strategic narratives and diplomacy.	verified source-guide; annotation metadata, not claim verification
[ageint093]	Deception, Disinformation, and Strategic Communications	Fletcher Schoen and Christopher J. Lamb, 'Deception, Disinformation, and Strategic Communications: How One Interagency Group Made a Major Difference,' INSS Strategic Perspectives No. 11 (NDU Press, June 2012). The study examines the U.S. Active Measures Working Group, a small interagency committee formed in the 1980s to expose and counter Soviet disinformation, and analyzes why it succeeded where most such groups fail.	verified source-guide; annotation metadata, not claim verification

Source	Cited work	Curriculum annotation	Status
[ageint094]	Deception, Disinformation, and Strategic Communications: How One Interagency Group Made a Major Difference	Fletcher Schoen and Christopher J. Lamb, 'Deception, Disinformation, and Strategic Communications: How One Interagency Group Made a Major Difference,' INSS Strategic Perspectives No. 11 (NDU Press, June 2012).	verified source-guide; annotation metadata, not claim verification
[ageint095]	COGNITIVE SECURITY IN THE AGE OF AI	No displayable curriculum annotation; see original work for scope.	original source-guide; annotation metadata, not claim verification
[ageint096]	AI DEVELOPMENT SHOULD PRIORITIZE COGNITIVE SECURITY	A position paper (Stanford authors, ICLR 2026 workshop) arguing that AI research and development should prioritize cognitive security, defined as protecting human cognitive processes from hazardous influence. It notes that generative AI systems increasingly designed to influence beliefs and behavior raise acute governance concerns, while research on these effects remains fragmented.	verified source-guide; annotation metadata, not claim verification
[ageint308]	Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure	An archived CISA publication, "CISA Insights: Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure," providing guidance on the threat that foreign influence campaigns pose to U.S. critical infrastructure.	verified source-guide; annotation metadata, not claim verification
[ageint311]	Countering Information Threats	An official NATO topic page describing the Alliance's approach to countering information threats, defined as intentional, manipulative, and coordinated activities by state and non-state actors including disinformation and propaganda. It explains why such threats matter for democratic processes and institutional trust, and outlines a four-part framework of understanding, preventing, containing, and recovering.	verified source-guide; annotation metadata, not claim verification

Where this sits. This module's overview is Section 29; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

29.3.4 Active Measures and Disinformation governance boundary: synthesis, agent-assistance rules, rights, and assurance gates

Navigation. Parent section: Section 29.

29.3.5 Active Measures and Disinformation analytic synthesis: source-backed claims and forbidden leaps

Contextual source routes. For module 19's governance-boundary section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

Research lane: **Cognitive Security and Influence Resilience** for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. [ageint238]; [ageint239].

Curriculum topic spine: Cognitive influence-analysis case review using sample materials, **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, **Declassified source-protection and institutional-control case study**. **Recorded source cluster; inspection and scope limits apply:** [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]; [OECD, 2026c]; [Geneva Centre for Security Policy, 2025]; [United States Intelligence Community, 2020a].

Conceptual depth: protecting attention, belief formation, and decision quality without turning resilience education into manipulation.

Method stack: claim decomposition, narrative provenance, inoculation framing, bias checks, audience-risk review, and after-action learning.

Composability contract: separate descriptive analysis, normative assessment, response options, and protected-audience considerations.

Known failure modes: counter-messaging as manipulation, overclaiming intent, pathologizing audiences, and collapsing uncertainty into moral certainty.

Defensive boundary: practice uses benign simulations and resilience education; it does not create persuasion campaigns, impersonation, or deception plans. Applied to **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

Anchor	Why it matters here
[Cybersecurity and Infrastructure Security Agency, 2024b]	Official CISA guidance on foreign influence operations targeting critical infrastructure. Checked as of 2026-05-21; role: source_quality_anchor.
[North Atlantic Treaty Organization, 2026a]	Official NATO counter-information-threat guidance. Checked as of 2026-05-21; role: source_quality_anchor.
[Cybersecurity and Infrastructure Security Agency, 2026b]	Official CISA election-security source for public-resilience, foreign-influence awareness, rumor control, and defensive communication framing. Checked as of 2026-05-21; role: curriculum_anchor.
[North Atlantic Treaty Organization, 2026b]	Official NATO source for hybrid-threat resilience across cyber, information, economic, political, and military pressure. Checked as of 2026-05-21; role: curriculum_anchor.
[OECD, 2026c]	Official OECD policy source for information integrity, governance responses, public trust, and democratic resilience. Checked as of 2026-05-21; role: curriculum_anchor.
[Geneva Centre for Security Policy, 2025]	Policy-scholarship source for cognitive security, information literacy, critical thinking, and whole-of-society resilience. Checked as of 2026-05-21; role: curriculum_anchor.
[United States Intelligence Community, 2020a]	Official IC framework for AI goals, authorities, human judgment, bias mitigation, testing, documentation, explainability, and review. Checked as of 2026-05-21; role: curriculum_anchor.

29.3.5.1 Active Measures and Disinformation evidence standard and citation floor: source families and discovery limits

Official guidance supplies governance, safety, and legal constraints for the **Cognitive Security and Influence Resilience** lane; scholarly or policy-scholarship sources supply explanatory frames; source-guide citations preserve the inherited AGEINT bibliography. Perplexity-assisted discovery is allowed during maintenance, but the manuscript citation itself must resolve to a direct source URL in `references-*.bib`. Local checks start with [ageint238]; [ageint239].

29.3.6 Active Measures and Disinformation agentic boundary: assist, approve, block, and record

Navigation. Parent section: Section 29.

AGEINT translation is bounded by the **Cognitive Security and Influence Resilience** lane. Agents may organize sources, retrieve context, compare alternatives, draft checklists, summarize evidence, simulate benign scenarios, and audit reasoning. They do not initiate unauthorized collection, exploitation, covert targeting, manipulation, or cyber-physical action; examples stay tied to **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.6.1 Active Measures and Disinformation permitted defensive utility: curriculum uses and safe outputs

Navigation. Parent section: Section 29.

The defensive utility is curriculum design, tabletop preparation, risk assessment, governance review, source evaluation, and resilience planning. Work products fit the current unit's education, policy review, lab exercises, and accountable defensive analysis for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.6.2 Active Measures and Disinformation excluded operational boundary: blocked actions and stop rules

Keep all practice accountable, synthetic, defensive, logged, reversible, and evidence-bounded while working from [ageint238]; [ageint239] and **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. Do not convert it into live targeting, evasion, exploitation, covert collection, manipulation, or unsafe cyber-physical action.

29.3.7 Active Measures and Disinformation governance assurance: authority, rights, evidence, and human review

Navigation. Parent section: Section 29.

Governance is practiced as a gate on the **Cognitive Security and Influence Resilience** lane. Learners use the **Cognitive-Resilience Lens** to decide who is accountable for the exercise, which evidence is sufficient, what rights and access issues remain, and when an agent-assisted artifact must stop for human review while using **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.7.1 Active Measures and Disinformation governance card: gates, retained evidence, and review owner

Gate	Coursebook check	Evidence retained
Authority	A legitimate educational or defensive purpose AND documented permission for the exact activity, data and tools are required, with a named reviewer. Classroom approval covers only the permitted fictional exercise; unknown or missing authority is a hold.	applicable rule and scope, data-use permission, excluded-action list, and accountable reviewer
Evidence	Separate contextual citations from the claim-specific passage, version, source dependence and limitations; begin the source review with [ageint238]; [ageint239].	claim ledger, locators, source descriptors, alternatives, and separate likelihood/confidence fields
Rights and access	Privacy, accessibility, learner support, and affected-group impacts are considered before reuse.	rights note, accommodation path, and unresolved-risk owner
Agent control	Any agent assistance stays bounded to retrieval, comparison, drafting, simulation, critique, or audit.	tool allowlist, prompt/output record, stop condition, and rollback note
Assurance	The artifact is challenged against **Cognitive Security and Influence Resilience** failure modes and the **Cognitive-Resilience Lens** safety check.	failure-mode note, remediation item, retest result, and refresh trigger

29.3.7.2 Active Measures and Disinformation evidence package handoff: appendices, records, and reuse Detailed model/data cards, transparency notices, retention rows, release gates, risk exceptions, incident drills, procurement and learner-support forms live in the shared orientation sections and Section 3. The methods appendices apply and link those forms rather than duplicating them. The local **Cognitive-Resilience Lens** evidence gate stays compact enough to apply during reading, practice, and revision for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.7.3 Active Measures and Disinformation current-source assurance: verified anchors and local artifact fit The source assurance check ties the current verified anchor set to the local chapter artifact instead of relying on discovery summaries, here covering **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. [ageint238]; [ageint239].

Assurance question	Direct source evidence	Chapter artifact
What does the module inherit from `official_cisa_foreign_influence` for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**?	Preparing for and Mitigating Foreign Influence Operations; lane `source_quality_spine`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; source-quality triangulation and claim-boundary review
What does the module inherit from `official_nato_counter_information_threats` for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**?	Countering Information Threats; lane `source_quality_spine`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; source-quality triangulation and claim-boundary review
What does the module inherit from `official_cisa_election_security_influence` for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**?	Election Security; lane `cognitive_influence_security`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; Official CISA election-security source for public-resilience, foreign-influence awareness, rumor control, and defensive communication framing.
What does the module inherit from `official_nato_hybrid_threats` for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**?	Countering Hybrid Threats; lane `cognitive_influence_security`; checked 2026-05-21.	narrative-risk map with provenance, uncertainty, audience harms, and response options; Official NATO source for hybrid-threat resilience across cyber, information, economic, political, and military pressure.
How is Perplexity handled here?	Discovery and second-opinion notes are not citable authority unless converted into direct official, standards-body, public-domain, or scholarly anchors.	Claim ledger records the direct URL, checked date, source lane, refresh trigger, and reviewer.

Where this sits. This module's overview is Section 29; return to the curriculum atlas Section 2 for the reader paths, evidence map, and safety gates that govern this module.

29.3.8 Active Measures and Disinformation assessment route: capstone artifacts, refresh duties, reviewer challenges, and handoff

Navigation. Parent section: Section 29.

29.3.9 Active Measures and Disinformation assessment pathway: capstone artifacts and mastery evidence

Navigation. Parent section: Section 29.

29.3.9.1 Active Measures and Disinformation capstone pathway: reviewable packet and excluded use The capstone deliverable is a reviewable packet that plugs into the broader unit thread. Run it through the canonical phase, artifact, and review-gate ladder in the shared method-and-assurance reference (Section 3); the local topic cluster is **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

Minimum module submission: one-page analytic memo, source-lane map, claim ledger, safe-lab packet, rubric self-assessment, and debrief note. The packet must name what is excluded, who may approve reuse, and what would trigger a source refresh for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** and [ageint238]; [ageint239].

29.3.9.2 Active Measures and Disinformation instructor facilitation notes: studio roles and pause points Facilitate as a bounded studio around **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, not as a lecture-only session.

- Start with the authority card and excluded-action list before showing examples from **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** and [ageint238]; [ageint239].
- Assign one learner to maintain the claim ledger and one learner to challenge source quality.
- Keep agent prompts visible enough for review and separate from final judgment.
- Pause any activity that drifts toward live systems, real people, sensitive data, or external action.
- End with a debrief that separates evidence learned, uncertainty preserved, rights impact, and next refresh owner.

29.3.9.3 Active Measures and Disinformation assessment rubric: topic evidence and mastery criteria

Topics or pattern identities (complete coverage)	Evidence of mastery
Cognitive influence-analysis case review using sample materials; **Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**; **Declassified source-protection and institutional-control case study** **Historical campaign labels: attribution, warning and unresolved aliases**; **Russian Active Measures in the: Cognitive influence-analysis case review using sample materials**; **Chinese Information Operations: United Front Work Department Deception, Disinformation, and Strategic Communications: NDU case study**; **AI-Driven Active Measures: Cognitive influence-analysis case review using sample materials**; **Countermeasures: Disinformation Detection and Response**	**Source warrant:** reconstruct a consequential claim from an exact source locator; separate observation from inference and apply this check: distinguish observation, attribution, impact assessment, and resilience response. **Competing explanation:** compare two accounts of the same evidence; identify a discriminating observation and a claim neither account can yet support. **Revision and transfer:** revise or defend the judgment after the withheld evidence arrives; identify what cannot transfer to another benign case. Apply the boundary: exclude manipulation scripts, impersonation, persuasion targeting, and operational influence planning.

The groups cover every listed topic, not just the opening topics. For pattern registries, each identity includes its methods, defensive application, and architecture aspects in one reviewable artifact. The row identifies a focused reasoning operation; the studio's source trace, competing explanation, and withheld-evidence revision remain required for every topic or pattern in **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. For the transfer challenge, compare the final listed topic or pattern with the first: explain which claim, permission, or evidence assumption fails to carry over after the instructor's new evidence. For a single-topic module, change the benign case instead. A justified abstention or refusal to transfer can demonstrate mastery; an unsupported confident answer cannot. Use the canonical five-row rubric in the shared method-and-assurance reference (Section 3) for conceptual command, analytic rigor, agentic design, governance and rights, and safety posture.

29.3.10 Active Measures and Disinformation refresh map: source changes, safety triggers, and retest duties

Source changes, unsafe wording, inaccessible artifacts, rights triggers, tool incidents, and instructor debrief findings each produce a visible owner, action, and retest condition before the module is reused against [ageint238]; [ageint239] and **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**.

29.3.10.1 Active Measures and Disinformation refresh triggers: source changes and required actions Refresh against the canonical trigger-and-action table in the shared method-and-assurance reference (Section 3). When a source-guide reference, official standard, AI or public-sector policy, interface specification, safety audit, or instructor debrief signal appears, take the matching required action before reuse for **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. The local signals begin with [ageint238]; [ageint239].

29.3.10.2 Active Measures and Disinformation claim and evidence ledger: claim classes, caveats, and owners The claim and evidence ledger follows the canonical claim-class ladder in the shared method-and-assurance reference (Section 3). Apply the source-spine, research-backed governance, agentic-workflow, empirical or evaluated capability, safety, and cross-module claim classes to every assertion, attaching the required evidence and clearing the matching review gate before reuse. The local topic cluster is **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**, and the source spine for these checks begins with [ageint238]; [ageint239].

29.3.11 Active Measures and Disinformation reviewer challenge route: checklist, failure evidence, and remediation

Before marking the work complete, verify the local source spine beginning with [ageint238]; [ageint239].

Contextual source routes. For module 19's review-checklist section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

- The module source spine resolves to Pandoc citation keys and no raw source URLs are pasted into prose, here covering **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation**. [ageint238]; [ageint239].

- Every research-backed claim has a directly verified source anchor or is clearly marked as source-guide context.
- Agentic affordances are limited to retrieval, comparison, drafting, simulation, critique, and audit support.
- The lab packet uses public, benign, owned-lab, or synthetic material only.
- The artifact names assumptions, caveats, uncertainty, excluded actions, and human review points.
- No Figure, Section, Equation, chapter, or appendix numbers are hard-coded outside generated labels.

29.3.12 Active Measures and Disinformation learning-path links: module map, overview, and curriculum atlas

These links keep **Cognitive influence-analysis case review using sample materials; Dezinformatsiya: Forgery, Front Organizations, Media Manipulation** paired with the orientation atlas, the parent unit, and the previous and next modules, so a reader can trace which claims and caveats are inherited rather than re-derived here. Anchored at [ageint238]; [ageint239].

Section 2, Section 27, Section 28, Section 30

30 Social Engineering

30.0.1 Social Engineering figures and course links: visual evidence, source flow, and navigation

The module uses Figure 68 and Figure 64 to map its evidence flow, safety boundaries, review artifacts, and refresh cues.
Navigation links: Section 2, Section 27, Section 29, Section 31.
This module teaches the **Cognitive Security and Influence Resilience** lane through a bounded, source-backed coursebook chapter. [ageint238]; [ageint240].

30.1 Cognitive Security and Influence Resilience frame for Social Engineering: source context, topic focus, and reader task

Navigation. Parent section: Section 30.

30.1.1 Social Engineering orientation: reader task, conceptual primer, outcomes, and vocabulary

Navigation. Parent section: Section 30.

30.1.2 Social Engineering conceptual primer: source context, core model, and reader task

This chapter teaches cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The chapter uses **Cognitive-Resilience Lens** to connect definitions, evidence tests, practice artifacts, and review gates for **Influence principles: edition-bounded recognition, not vulnerability diagnosis; History of Social Engineering**.
The central distinction is to separate analysis of influence from persuasion design. Core topics include **Influence principles: edition-bounded recognition, not vulnerability diagnosis; History of Social Engineering; Social Engineering: The Science of Human Hacking (Hadnagy, 2018)**. Each topic covers meaning, evidentiary support, common misconceptions, and safety boundaries.
Governance requirements use verified official, standards, public-domain, or scholarly anchors such as [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]. Technical, theoretical, or empirical statements require direct domain sources and are limited to what those sources establish. [ageint238]; [ageint240].
Learners move from vocabulary and the **Cognitive-Resilience Lens** distinction through topic lessons on **Influence principles: edition-bounded recognition, not vulnerability diagnosis** with evidence and misconception checks, then assemble a **narrative-risk map with provenance, uncertainty, audience harms, and response options** with safety and rights gates.

30.1.3 Social Engineering learning outcomes: analytic moves, evidence duties, and transfer

Navigation. Parent section: Section 30.

- Connect **Influence principles: edition-bounded recognition, not vulnerability diagnosis and History of Social Engineering** to **Cognitive Security and Influence Resilience** by naming shared vocabulary, evidence burden, and audience-facing caveats.
- Build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** that keeps observation, inference, uncertainty, source quality, reviewer decision, and refresh trigger separate.
- Apply the key distinction: separate analysis of influence from persuasion design; show where an apparently useful shortcut would cross that line.
- Diagnose failure modes such as counter-messaging as manipulation, overclaiming intent, pathologizing audiences, and collapsing uncertainty into moral certainty, then write one recovery move for each failure mode that preserves the learning objective.
- Teach the defensive boundary back to a peer: practice uses benign simulations and resilience education; it does not create persuasion campaigns, impersonation, or deception plans.

30.1.4 Social Engineering core vocabulary: source terms, method roles, and safety limits

Navigation. Parent section: Section 30.

Term	Working definition
Narrative provenance	where a claim, frame, or story came from and how it spread
Prebunking	transparent education about misleading patterns before exposure; its effectiveness and transfer require evidence rather than assumption
Audience harm	a privacy, dignity, autonomy, or trust risk for people receiving information
Attribution caution	the rule that intent and origin claims need strong evidence
Resilience response	a transparent education, correction, or process improvement that avoids manipulation
MISO boundary	the separation between this classroom analysis and authorized military influence activities; MISO is not defined simply as covert messaging
Inoculation	an approach intended to build recognition of misleading tactics; it does not imply immunity or proven efficacy for a particular audience

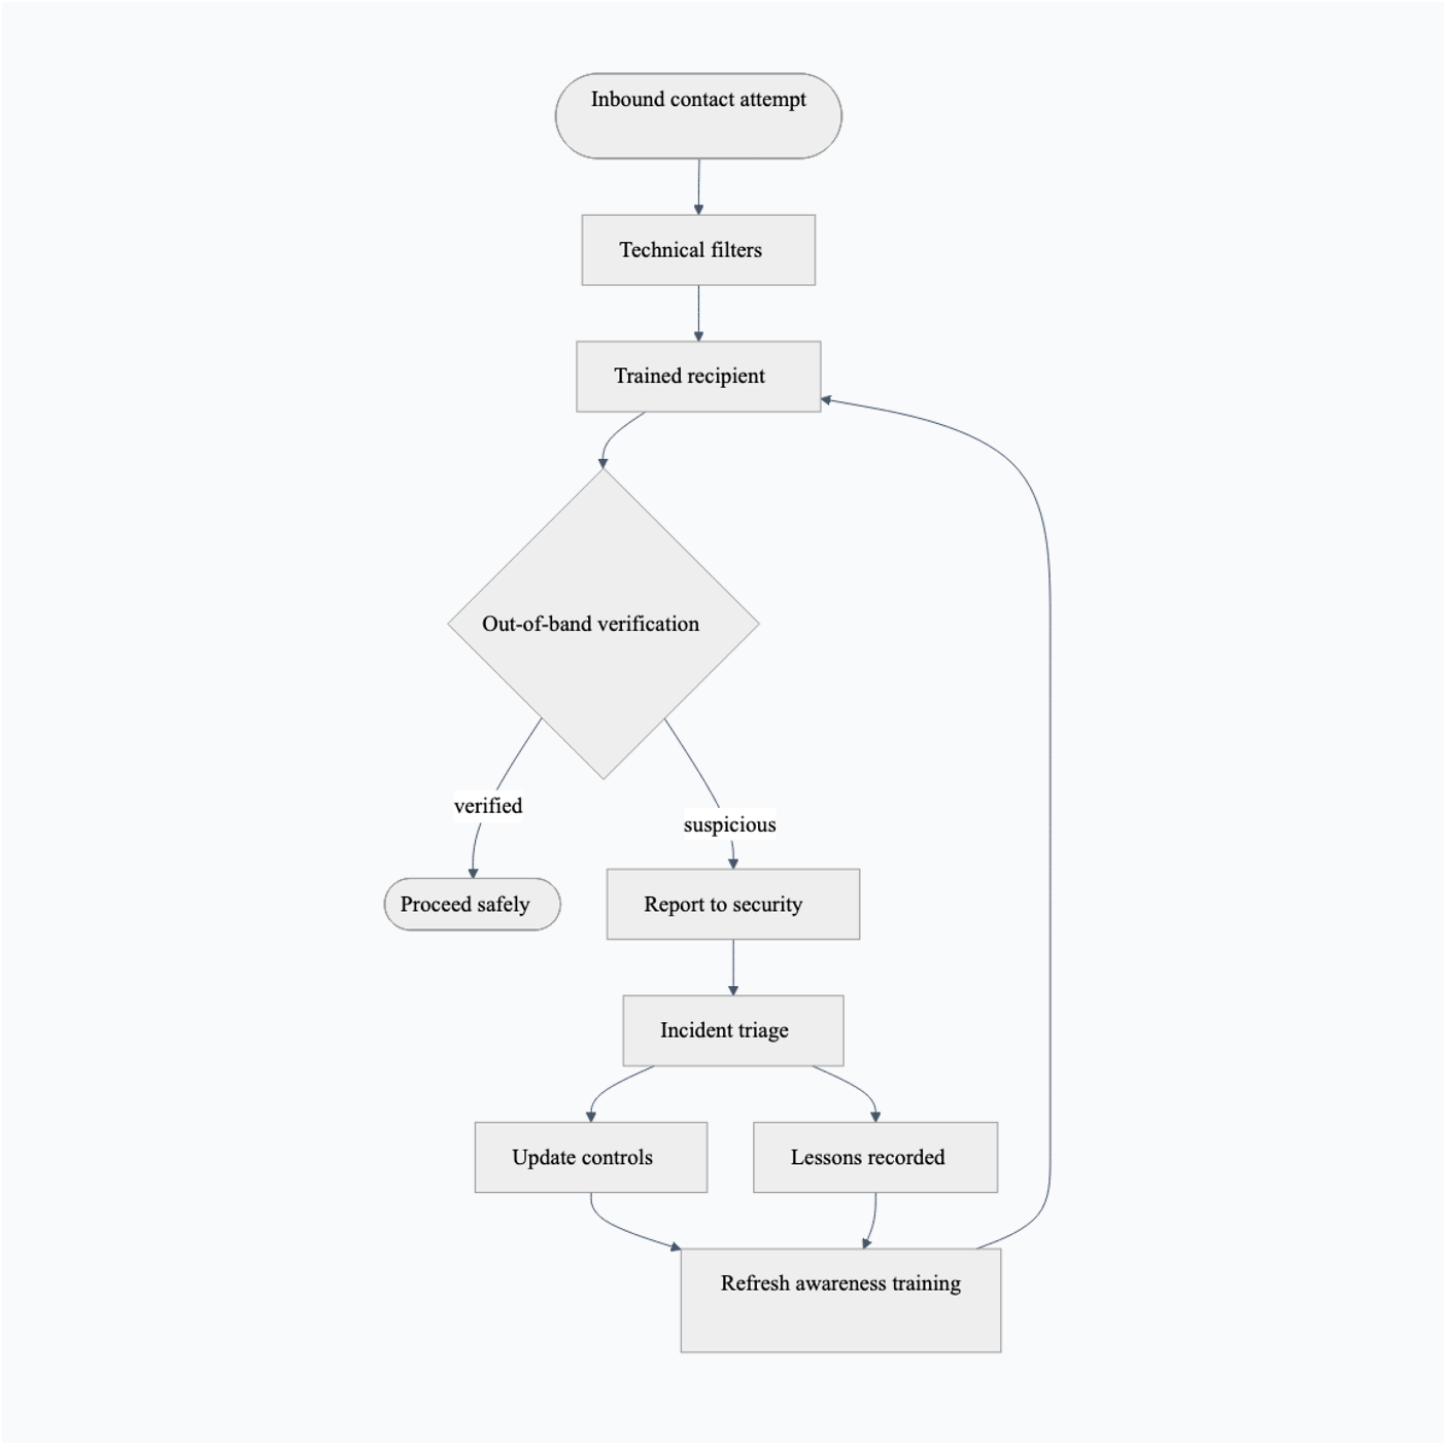

Figure 68: The layered human and technical control loop that lets an organization absorb a social-engineering attempt and convert it into a reported, learned-from event. The captioned view belongs to the psychological operations and influence / social engineering section and should be read as a map of Inbound contact attempt, Technical filters, Trained recipient, and Proceed safely, not as a capability score or live-task instruction.

30.2 Cognitive-Resilience Lens path for Social Engineering: lesson cluster, safe artifact, and review

Navigation. Parent section: Section 30.

30.2.1 Social Engineering practice studio: topic lessons, safe worked example, and knowledge check

Navigation. Parent section: Section 30.

30.2.2 Social Engineering topic lessons: source-backed concepts and transfer tasks

Social Engineering builds cognitive security as protection of attention, trust, memory, and decision quality without creating manipulation. The sequence opens with **Influence principles: edition-bounded recognition, not vulnerability diagnosis**, **History of Social Engineering**, **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)** and applies the **Cognitive-Resilience Lens** practice frame through concept, evidence, artifact, misconception, and transfer tasks.

Learning-path links. Unit module map Figure 64; module overview Section 30; curriculum atlas Section 2.

Contextual source routes. For module 20's topic-lessons section, the **Cognitive Security and Influence Resilience** catalog routes include [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a]; [Cybersecurity and Infrastructure Security Agency, 2026b]; [North Atlantic Treaty Organization, 2026b]. Check the actual passage, edition, claim scope and access limitations before use. Route membership does not establish relevance, independent corroboration or efficacy.

30.2.2.1 Lesson 1: Influence principles: edition-bounded recognition, not vulnerability diagnosis

Concept. Influence principles: edition-bounded recognition, not vulnerability diagnosis treats the vulnerability record as an assurance case: severity, affected component, provenance, mitigation status, and uncertainty stay separate.

Worked reasoning and limits. The seven-item formulation is edition-dependent: the author's 2021 edition announcement identifies unity as new, establishing list identity but not independent efficacy (https://www.influenceatwork.com/announcement/the-new-revision-of-influence/); the inherited vendor history does not establish that edition or universal effects. As defensive recognition prompts: reciprocity → obligation is not authorization; commitment/consistency → recheck a changed request; social proof → popularity is not authenticity; liking → familiarity is not identity; authority → verify role independently; scarcity → urgency does not remove checks; unity → shared identity does not confer access. These are questions to ask, not deterministic weaknesses or persuasion instructions.

Why it matters. Influence principles matters in the **Cognitive Security and Influence Resilience** lane because information-integrity analysis and resilience education evidence must stay separate from judgment; treating resilience labels as permission to skip provenance review is a common failure.

Source support. Inherited source-guide context for **Influence principles: edition-bounded recognition, not vulnerability diagnosis**: [ageint097]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Influence principles**, inspect the original passages. Curriculum annotation for [ageint097]: This Mitnick Security guide traces the history and evolution of social engineering from antiquity through modern cyberattacks. It surveys major attack categories including phishing and its variants, pretexting, baiting, tailgating, and quid pro quo schemes, and explains the psychological influence principles such as reciprocity, scarcity, authority, and consensus that attackers exploit. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Influence principles**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Influence principles**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Influence principles** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Influence principles**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Transfer **Influence principles** from this module to a second motif by preserving information-integrity analysis and resilience education, replacing action with audit, and naming the blocked use.

30.2.2.2 Lesson 2: History of Social Engineering

Concept. History of Social Engineering teaches defensive recognition of manipulation attempts using sample messages, consent boundaries, and reporting duties.

Worked reasoning and limits. Treat a security vendor's historical overview as practitioner context with selection and commercial incentives, not a complete history or controlled evaluation. Separate recurring request patterns from changing communication channels; an anecdote cannot establish incidence, effectiveness or a person's susceptibility [ageint097].

Why it matters. Analysts use **History of Social Engineering** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **History of Social Engineering**: [ageint097]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **History of Social Engineering**, inspect the original passages. Curriculum annotation for [ageint097]: This Mitnick Security guide traces the history and evolution of social engineering from antiquity through modern cyberattacks. It surveys major attack categories including phishing and its variants, pretexting, baiting, tailgating, and quid pro quo schemes, and explains the psychological influence principles such as reciprocity, scarcity, authority, and consensus that attackers exploit. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. Build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **History of Social Engineering**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape the same topic work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **History of Social Engineering**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Transfer **History of Social Engineering** from this module to a second motif by preserving information-integrity analysis and resilience education, replacing action with audit, and naming the blocked use.

30.2.2.3 Lesson 3: Social Engineering: The Science of Human Hacking (Hadnagy, 2018) Concept. Social Engineering: The Science of Human Hacking (Hadnagy, 2018) teaches defensive recognition of manipulation attempts using sample messages, consent boundaries, and reporting duties.

Worked reasoning and limits. The book's title is not a scientific-validity finding: classify its assertions as practitioner advice, anecdote or supported study before relying on them. Extract defensive recognition and verification questions only; no elicitation scripts, deceptive practice on classmates or tests of personal vulnerability [ageint098].

Why it matters. Social Engineering: The Science of Human Hacking (Hadnagy, 2018) connects classroom vocabulary to Cognitive Security and Influence Resilience practice: learners document evidence, caveats, and reviewer ownership rather than repeating labels.

Source support. Inherited source-guide context for **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)**: [ageint098]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)**, inspect the original passages. Curriculum annotation for [ageint098]: The full text of "Social Engineering: The Science of Human Hacking" (2nd edition, 2018) by Christopher Hadnagy, published by John Wiley & Sons. The book examines the human element of security, analyzing how manipulation and persuasion techniques can be used to influence people, and how individuals and organizations can recognize and defend against such tactics. It is written as a professional reference on understanding and countering human-targeted security threats. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Social Engineering**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Social Engineering**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)** work as a **narrative-risk and resilience map** that states the evidence used, what stays uncertain, who reviews it, and when to stop.

Misconception check. Correct the misconception about **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Transfer **Social Engineering: The Science of Human Hacking (Hadnagy, 2018)** from this module to a second motif by preserving information-integrity analysis and resilience education, replacing action with audit, and naming the blocked use.

30.2.2.4 Lesson 4: The Art of Human Hacking (Hadnagy, 2010) Concept. The Art of Human Hacking (Hadnagy, 2010) focuses on transparent resilience education: provenance, audience harm, attribution caution, and non-manipulative response options.

Worked reasoning and limits. Compare the two practitioner editions by the problem and evidence they describe, not by treating repeated examples as independent replications. A convincing story about rapport or authority does not establish an individual's motive, diagnosis or propensity to comply [ageint099].

Why it matters. Analysts use **The Art of Human Hacking (Hadnagy, 2010)** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **The Art of Human Hacking (Hadnagy, 2010)**: [ageint099]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **The Art of Human Hacking (Hadnagy, 2010)**, inspect the original passages. Curriculum annotation for [ageint099]: A PDF of the book Social Engineering: The Art of Human Hacking by Christopher Hadnagy, a foundational security text on how attackers exploit human psychology rather than technical flaws to obtain information or access. The work surveys manipulation tactics and the human factors that make organizations vulnerable, and frames this knowledge defensively to help security professionals recognize and resist such attacks. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **The Art of Human Hacking (Hadnagy, 2010)**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Art of Human Hacking**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape the same topic work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **The Art of Human Hacking (Hadnagy, 2010)**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Apply this module's safe boundary for **The Art of Human Hacking (Hadnagy, 2010)** to another artifact while keeping information-integrity analysis and resilience education and reviewer ownership explicit.

30.2.2.5 Lesson 5: Phishing, Vishing, Smishing, Deepfake Voice Attacks Concept. Phishing, Vishing, Smishing, Deepfake Voice Attacks teaches defensive recognition of manipulation attempts using sample messages, consent boundaries, and reporting duties.

Worked reasoning and limits. Email, voice and text differ as channels, but the defensive question is whether the request and requester are independently authenticated; perceived voice realism is not identity proof. Completed offline case: Q1 is an urgent synthetic voice transcript requesting a roster; Q2 is a text claiming the same authority; Q3 is a previously supplied directory card with the approved verification route. The worked answer pauses disclosure, uses Q3 rather than contact details inside Q1/Q2, and records only request type and verification status; agreement between two messages does not authenticate either. Withheld Q4 shows an authorized scheduling error, so revise from 'possible impersonation' to 'misrouted legitimate request', correct the record without blame and stop; the packet never establishes theft, AI generation or a real person's intent.

Why it matters. Analysts use **Phishing, Vishing, Smishing, Deepfake Voice Attacks** to separate analysis of influence from persuasion design. A defensible treatment names the judgment it enables for information-integrity analysis and resilience education review, the proof limit that treating resilience labels as permission to skip provenance review would otherwise hide, and the reviewer accountable for challenge.

Source support. Inherited source-guide context for **Phishing, Vishing, Smishing, Deepfake Voice Attacks**: [ageint300], [ageint304], and [ageint306]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Phishing, Vishing, Smishing, Deepfake Voice Attacks**, inspect the original passages. Curriculum annotation for [ageint300]: MITRE ATLAS knowledge base for adversarial threats to AI systems, used for defensive AI red-team assurance and misuse taxonomy. Curriculum annotation for [ageint304]: NIST SP 800-218, the Secure Software Development Framework Version 1.1 published in February 2022, establishes a set of high-level practices for integrating security into software development lifecycles in order to reduce vulnerabilities in released software, mitigate the impact of exploited vulnerabilities, and address root causes to prevent recurrences. Curriculum annotation for [ageint306]: Official CISA Artificial Intelligence page for AI security, safety, resilience, and critical-infrastructure governance source support. These editorial descriptions are

not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Phishing, Vishing, Smishing, Deepfake Voice Attacks**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Phishing Vishing Smishing Deepfake Voice**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape the same topic work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **Phishing, Vishing, Smishing, Deepfake Voice Attacks**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **Phishing, Vishing, Smishing, Deepfake Voice Attacks** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

30.2.2.6 Lesson 6: Physical Social Engineering: Access, Elicitation, Impersonation

Concept. Physical Social Engineering: Access, Elicitation, Impersonation teaches defensive recognition of manipulation attempts using sample messages, consent boundaries, and reporting duties.

Worked reasoning and limits. An unfamiliar visitor, unusual question or apparent role mismatch is not guilt; disability, unfamiliar procedures and honest mistakes are credible alternatives. Teach courteous referral to an authorized access/help process and protection of private information, not surveillance, confrontation, impersonation or covert questioning; the broad cited guidance does not validate particular physical techniques.

Why it matters. Without explicit treatment of **Physical Social Engineering**, treating resilience labels as permission to skip provenance review undermines information-integrity analysis and resilience education review; the lesson builds the habit to separate analysis of influence from persuasion design.

Source support. Inherited source-guide context for **Physical Social Engineering: Access, Elicitation, Impersonation**: [ageint308] and [ageint311]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **Physical Social Engineering**, inspect the original passages. Curriculum annotation for [ageint308]: An archived CISA publication, "CISA Insights: Preparing for and Mitigating Foreign Influence Operations Targeting Critical Infrastructure," providing guidance on the threat that foreign influence campaigns pose to U.S. critical infrastructure. Curriculum annotation for [ageint311]: An official NATO topic page describing the Alliance's approach to countering information threats, defined as intentional, manipulative, and coordinated activities by state and non-state actors including disinformation and propaganda. It explains why such threats matter for democratic processes and institutional trust, and outlines a four-part framework of understanding, preventing, containing, and recovering. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **Physical Social Engineering**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **Physical Social Engineering**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **Physical Social Engineering** work as a **narrative-risk and resilience map** that logs the evidence, the uncertainty, the responsible reviewer, and the halt condition.

Misconception check. Correct the misconception about **Physical Social Engineering**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **Physical Social Engineering** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

30.2.2.7 Lesson 7: AI Automation of Social Engineering at Scale

Concept. AI Automation of Social Engineering at Scale teaches defensive recognition of manipulation attempts using sample messages, consent boundaries, and reporting duties.

Worked reasoning and limits. A survey's reports of agent capabilities inherit each underlying study's task, permissions and evaluation conditions; they are not deployed success rates for all adversaries. Distinguish generated content, attempted contact, authenticated access and actual harm, and do not infer automation from fluent or repetitive language alone [ageint100].

Why it matters. Without explicit treatment of **AI Automation of Social Engineering at Scale**, treating resilience labels as permission to skip provenance review undermines information-integrity analysis and resilience education review; the lesson builds the habit to separate analysis of influence from persuasion design.

Source support. Inherited source-guide context for **AI Automation of Social Engineering at Scale**: [ageint100]. These citations preserve source identity, not automatic topical relevance, empirical validation or normative authority. No claim-specific primary support is established by this source-guide association alone. Profile context—not claim-specific validation—uses [Cybersecurity and Infrastructure Security Agency, 2024b]; [North Atlantic Treaty Organization, 2026a].

Evidence to inspect. For **AI Automation of Social Engineering at Scale**, inspect the original passages. Curriculum annotation for [ageint100]: This survey examines how large language model-based agents can be weaponized as autonomous cyberattack tools, analyzing their architecture across five core components: models, perception, memory, reasoning and planning, and tools. The authors document eight attack categories and map them across static infrastructure, mobile networks, and infrastructure-free systems such as blockchain and the metaverse. These editorial descriptions are not source-authored quotations or independently verified lesson support. Record a passage and locator, distinguishing primary findings, normative requirements, proposals and context using Section 3.6; unsupported claims remain gaps.

Student artifact. For **AI Automation**, build a **narrative-risk map with provenance, uncertainty, audience harms, and response options** for this information-integrity analysis and resilience education topic. The artifact must record the narrative provenance, the bounded claim about **AI Automation of Social Engineering**, the audience-harm caveat, the uncertainty note, the transparent-use boundary, and the reviewer accountable for correction. Shape **AI Automation of Social Engineering at Scale** work as a **narrative-risk and resilience map** that names evidence, uncertainty, reviewer, and stop condition.

Misconception check. Correct the misconception about **AI Automation of Social Engineering at Scale**: that a resilience label on a technique means it has been stress-tested, rather than a habit that still needs evidence, caveats, and reviewer challenge.

Transfer task. Reuse the **AI Automation of Social Engineering at Scale** audit pattern from this module on a different sample record set with a new reviewer and blocked-use note.

30.2.2.8 Lesson 8: Defense: Training, Simulation, Technical Controls

Concept. Defense: Training, Simulation, Technical Controls focuses on transparent resilience education: provenance, audience harm, attribution caution, and non-manipulative response options.
